The Independent said: "A singularly engaging presentation of an agnostic's picture of human life. . . . Backed by weight and guided with an admirable show of fairness and liberality. . . . Far and away superior to 'Robert Elsmere,' 'David Grieve,' or 'John Ward, Preacher,' in point of argument, directness of vision in handling questions of human conduct, and in force of bold projection and apt and distinct illustration. Moreover, as a mere love story this novel has that charm of blended romance and realism, that captivating verisimilitude, and that nameless power to haunt one with its shame-tinged sorrow and happiness which testify unmistakably of genius."

The Springfield Republican said: "As heavy and dull as November. . . . This mistake is published by Macmillan."

The Cleveland Leader said: "The rankest rot, ethically and artistically, ever published, and is warranted to kill any one having a stomach habituated to healthy nourishment."

Cloth. $1.50

STAR BLUING CO., Cato, N. Y.

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with THE NATION stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

THE NEW MACMILLAN PUBLICATIONS

The Statesman's Year Book, 1905

Statistical and Historical Annual of the States of the World, edited by J. Scott Keltie, LL.D., 42d annual publication, revised after Official Returns, some of them including reports a year later than are included in statistical almanacs, etc., issued in January.

Though again increased in size its price remains as before, $3.00 net (postage 19c.)

Dr. J. Macbride Sterrett's The Freedom of Authority

These "essays in apologetics" are based on the thesis of the concrete freedom of the individual through the bonds of family, state, church, and the various social circles of which he is a member. Ultimately the book holds that God's service is perfect freedom.

Ready this week. Cloth, 12mo, $2.00 net (postage 14c.)

Mr. Arthur K. Kuhn's *translation of* Professor Meili's International Civil and Commercial Law

is the first work of the kind issued since the important changes of the past four or five years, and to all English jurists becomes at once the standard authority on its subject. Succinct statements of the law of America and England complete the comparative nature of the work.

Cloth, 8vo. Ready next week

Dr. Edward Alsworth Ross's Foundations of Sociology

aims to supply some notion of what has been and tends to be in the sphere of social life as the foundation for an authoritative body of social theory.

In the Citizen's Library. Half leather, $1.25 net

Gen. Henry L. Abbot's Problems of the Panama Canal

Brig.-Gen. Abbot is in a position, as is no other man, to know the exact truth through seven years' close connection with the reorganization of the canal works. He makes the whole matter clear as to the climate, the health conditions, the rival routes, the engineering difficulties, and, in short, as to the construction of the best possible canal.

Cloth, 12mo, $1.50 net (postage 12c.)

Dr. John A. Fairlie's National Administration of the United States

is the first comprehensive and systematic treatment of the administrative portion of our national government, and in view of the recent changes the work is exceptionally valuable to every one who has occasion to speak or write on matters pertaining to our federal government.

Cloth, 8vo, 274 pp. $2.50 net (postage 18c.)

Mr. William Roscoe Thayer's A Short History of Venice

A rapid narrative of the structural growth of the Venetian Republic with detailed accounts of its crises and striking episodes. Its emphasis is upon the wonderfully efficient Venetian government, and the Venetian character in its genius at once for the Practical and the Beautiful.

Cloth, 12mo, $1.50 net (postage 13c.)

Professor Harry Thurston Peck's Prescott

A new volume in the American extension of the well-known "English Men of Letters" Series. Uniform with Colonel Higginson's "Whittier," etc.

Cloth, 12mo, 75 cents net (postage 8c.)

Mr. William A. Bradley's Bryant

In the same series as the above, uniform with Benson's "Rossetti," Chesterton's "Browning," etc. *Cloth, 75 cts. net (postage 8c.)*

Mrs. Maude Gridley Peterson's How to Know Wild Fruits

is a useful guide, very fully illustrated by Mary Elizabeth Herbert, to plants when not in flower by means of fruit and leaf.

Cloth, 12mo, $1.50 net (postage 14c.)

THE BEST NEW NOVELS

Foxcroft Davis's Mrs. Darrell

is a highly diverting picture of social life in the high political circles of Washington. It is done with a light, pleasant touch wholly free from satirical sting, and should be remembered as pleasant vacation reading.

Ready this week. Cloth, $1.50

READY NEXT WEEK

John Heigh's The House of Cards

A record which will appeal to many as a strong story of a somewhat exceptional kind. The sometime major who tells it is of the age when wit is ripest, judgment mellowed, and horizon broadest.

Cloth, $1.50

Miss Robins's A Dark Lantern

is a very modern story of exceptional interest, and its pictures of society in England are as graphic and authoritative as anything in fiction. It will prove especially strong in its appeal to the woman who looks on modern life with open eyes.

Cloth, $1.50

READY IN MAY OR JUNE

Mr. Robert Herrick's Memoirs of an American Citizen *50 illustrations*

is at once the best work he has done and the strongest in its appeal to the popular interest.

Cloth, $1.50

Charles Egbert Craddock's The Storm Centre

is a sweet natural love story whose scenes are set in the surroundings where the author is most at home—the mountains of golden Tennessee.

Cloth, $1.50

Jack London's The Game

A transcript from real life by the author of "The Call of the Wild," "The Sea-Wolf," etc., etc. Illustrated by HENRY HUTT.

Cloth, $1.50

Barbara's *new novel* At the Sign of the Fox

is by the author of "The Garden of a Commuter's Wife" and a novel of the same attractive type.

Cloth, $1.50

Mrs. Nancy Huston Banks's The Little Hills

recalls the restful, fragrant atmosphere of her "Oldfield," till one feels that they must have arisen not far from Miss Judy's home, just up the long shady road.

Cloth, $1.50

The Nation.

NEW YORK, THURSDAY, MAY 18, 1905.

The Week.

"A notable public service" has been the general comment on President Roosevelt's brief reply to the Chicago strikers. His words were addressed not only to the teamsters of Chicago, but to members of labor unions everywhere; his reference was not merely to the use of Federal troops to preserve order, but also to local constabulary and State militia. The officers of the law, whatever their name and rank, were, he declares, entitled to the hearty support of every good citizen. President Roosevelt was quick to see the real significance of the strikers' protest against troops, of their quotation from Benjamin F. Butler's incendiary harangue about arms and torches in the hands of the workingmen, of their sneer that a "few soldiers" cannot scare "the men who make armies and compose the flower of American manhood." The memorial which was offered to the President was nothing less than a threat that a Federal regiment, if it came to Chicago, would be received as the aggressor. There was no mistaking the sullen defiance of the question, "Are we serfs that we cringe at the mention of troops?" It was such expressions that shook Mr. Roosevelt from his avowed intention of receiving the petition without comment; and his words had the strength of a moral indignation the more impressive because unpremeditated.

Seventeen men, including the six members of the employing firm, were concerned in the original dispute out of which the great Chicago strike has grown. Thirty-seven men were present at the meeting that voted it. The Chicago *Tribune* has attempted an estimate of the monetary loss caused by the disturbance, and concludes that $2,500,000 a week is near the truth. In the first place, the State Street stores found that their business fell off 10 per cent. or more through sheer unwillingness of shoppers to venture abroad. The railroads are set down for $350,000 loss, the express companies for $250,000, the hotels for $10,000, and the theatres for $3,000. This estimate of loss from decreased business may not be a fair one, for in many cases, doubtless, the figures represent deferred business rather than loss. The freight will have to be moved some time, and the stores are now crowded with customers who are buying to-day what they wanted to buy last week. But the wages directly lost by striking teamsters would have amounted to $51,000, and the assessments on still employed members of the union to $27,000. Meals and lodging for non-union drivers cost $9,000. Finally, 600 special policemen and from 100 to 300 deputy sheriffs were sworn in. For their services the city and county paid $10,790.

It is somewhat surprising that the non-union bread eaten by John Mitchell at the Civic Federation banquet did not stick in his throat and choke him. Manifestly, the present mode of distinguishing the clean from the unclean food for the union man is inadequate to its purpose. As Mr. Mitchell puts it, rather pathetically, "It is unnecessary to say to your committee that the label is not placed on every slice of bread served." Well, if it is not, ought it not to be? True, some people are so fastidious that they do not like the taste of mucilage, paper, and printer's ink, but they are a weak-stomached lot at best. And there are many ways of accomplishing the result. A skilled baker ought to be able to make the label in some darker substance run lengthwise of the loaf, so that it will appear in the centre of every slice, after the style of the confectioners who make a flag appear in the cross-section of a stick of candy. Better still, perhaps, would be the use of some imperceptible chemical. The difference between a "scab" and a union man being fundamental, morally, mentally, and physically, it ought not to be hard to find some element to which they react differently, some industrial litmus which would turn the unionist blue and the non-unionist red.

The President has instructed Secretary Taft that supplies, machinery, and vessels shall, in the absence of action by Congress to the contrary, be purchased in the cheapest market, whether that market be our own or a foreigner's. The organs of protection unblushingly affirm that foreign prices are about 50 per cent. less than domestic prices for the supplies required; that steel dumping cars, for example, manufactured in Pittsburgh, are sold abroad from 30 to 40 per cent. less than in this country; that not only would the ships required cost them twice as much if bought of American builders, but that not until after a delay of eighteen months could they be had at all; and that buying in the cheapest market will materially decrease the cost of building the canal. The instinctive doubt will recur to the private citizen—"If low prices are a good thing for Uncle Sam, why are they pernicious for me?" The particular incident that precipitated the President's order in this matter was the discovery by the Canal Commission that two steamships of the requisite burden could be bought at once abroad for $700,000, or could be contracted for at home at not less than $1,400,000, with delivery guaranteed in a year and a half. Unmindful of the interest of the shipyards of America, unmindful also of the wages thus forfeited by our own workmen, the President ordered the pauper-built ships of foreigners to be purchased, thus committing an atrocious sacrilege in the protectionist holy of holies.

Commissioner Greene's review, at the annual dinner of the Civil Service Reform Association last week, of the extension of the merit system during the last six months constitutes a highly gratifying record, for which Mr. Roosevelt largely deserves the praise. Indeed, the whole note of the meeting was one of enthusiasm and optimism. The recruiting of the Panama Canal force by means of examination is in itself a triumph for the principle. Mr. Roscoe C. E. Brown, Gov. Higgins's excellent choice for one of the New York State Commissionerships, was also able to report gratifying progress. He wisely dwelt, however, upon the most serious problem before the administrators of the civil-service laws—how to eradicate properly the drones, the shirks, and the insubordinates among our civil servants. Until this is solved wisely, the system will not be free from criticism and complaint. Meanwhile, it is pleasing to learn from Commissioner Greene that senseless and prejudiced attacks in Congress, like those of such honorables as Congressmen Grosvenor and Hepburn, have reached a stage where they can be safely ignored. Just and helpful criticism is as welcome to civil-service reformers as it is to all others striving to improve the governmental machinery.

The Congressional party which is to visit the Philippines this summer under the Insular Government's auspices has been growing small by degrees and beautifully less, ever since Secretary Taft announced that its members will have to pay their own expenses aside from transportation. There seems to be also a general disposition to make little of the possible benefits of the trip. Thus, the Indianapolis *News* raises an interesting point. "Congress knows very well what is the matter [in the islands]," it says, "and so does all the world. The protected interests that control Congress will not permit that body to enact the commercial legislation that every governor and every national board has declared is necessary." Moreover, "we do not have to go back of our own official reports to learn that we are not

doing things right, but wrong." "To this is to be added the testimony of every person that has written on the subject from an independent standpoint." What, after all, will the party of Congressmen bring home next fall that they have not already in their possession? That any considerable number will change their views on our general colonial policy, or even on the larger measures growing out of it, is not for a moment to be supposed. Nor will they, probably, learn anything pertinent to the pending questions that they could not have learned at home. But the real function of such trips is not so much to instruct as to interest. The insular problems ought to appear a little more vital to the men who have been on the ground. To the numerous minor measures which Congress insists on keeping in its own hands, these men may be disposed to devote more thought.

The unusual promise of the country's wheat crop, shown by the Government's estimate last week, raises some interesting questions. If present indications of condition and acreage were to hold good up to July, the yield of winter-sown wheat would be the largest in our history. It is too early as yet to make predictions regarding the spring-sown wheat, but preliminary estimates point to an abundant acreage and a condition above the average at the start. The question of a large or small wheat yield, always important because of its bearing on the year's industrial prosperity, has peculiar importance now because of our wheat trade's remarkable position. The past year has been marked by what may almost be called our disappearance from the ranks of great wheat-exporting States. In actual quantity, the wheat and flour sent abroad from the United States, since the harvest of 1904, have been much less than in any year since 1872. During two decades, we have held almost continuously the first place among the producing communities which feed the grain-consuming outside world. But the British trade reports for the first three months of 1905 place this country only fifth on the list, with our shipments falling far behind those of Russia, of India, of Australia, or of the Argentine Republic. In actual value, our wheat and flour exports, since last year's harvest, have fallen $58,000,000 below those of the same months a year ago, and $106,000,000 below those of 1902.

This shrinkage in our export of wheat and flour has been partly a question of decreasing yield; last year's American wheat crop, for example, having been 196,000,000 bushels under the "bumper" crop of 1901. But it has also been ascribed to other causes than accidents of a season. Broomhall, the English grain expert, pointing out a year ago the rise in price of American farm lands, the partial exhaustion of old producing districts, and the great increase in home consumption because of increasing population, argued that the United States must inevitably and permanently lose its position in the foreign grain trade. The past year's results are cited as proof of that theory, and they do in some measure prove it. But sweeping generalizations, in matters of this sort, are hazardous. At the beginning of last year, cotton trade experts, domestic and foreign, were discussing anxiously how the outside world could make good the loss, by American cotton planters, of the power to keep step with the world's increased consumption. By the end of the year a convention of planters was called at New Orleans to restrict the enormous "over-production" shown by the new crop of cotton. The lesson of this experience was, that nature has its own way of solving some of these awkward problems. In the case of cotton, the high prices created by these very misgivings of a year ago were the means of stimulating production to an unheard-of magnitude. It should not be overlooked that the past season's wheat prices have been offering similar inducements.

The assumption in Wisconsin politics just now seems to be that Robert M. La Follette will not go to the Senate at all, but will either remain on the spot as Governor and give up another year to securing the sort of Railroad Commission bill he wants, or will himself become a candidate for Railroad Commissioner. It is not by any means the first time that the politicians have concluded they knew what the energetic Governor was about to do. But if he actually does what they expect, it will, indeed, be something new. It appears, however, that the present session of the Legislature will end leaving the railroad regulation question substantially where it was two years ago. It has been one of La Follette's faults or virtues—depending on the point of view—that he has steadfastly refused to accept half a loaf. He could have had a Railroad Commission bill of a sort in 1903. His opponents say that he refused to accept a compromise merely because he wanted to keep a campaign issue in working order. This year they are saying the same thing of his demand for the bill he wants or nothing. But as one of the opposing candidates for the nomination last summer generously testified, "He is the only man who ever convinced the people of Wisconsin that he was sincere on the railroad question." It will be a strange development if, for all his popular following, he should round out his third term with the most important measure of his programme still unpassed.

Oregon's new direct primary law has had its first trial in the nomination of city officers for Portland, and apparently the experiment was reasonably successful. In the face of an energetic, though scattered, opposition from what was called the "church" element, the present Mayor, Auditor, and Treasurer were renominated by the Republicans—the practical equivalent to election. Mayor Williams, with five opposing candidates, received about two-fifths of the vote. The possibility of just such minority nominations is one of the arguments commonly put forward against the direct-primary idea. Under the still untried Illinois statute, a majority vote in the primary is necessary for nomination to the important offices, and the candidate having less must again submit his claims to a convention. The vote in the Portland primary was approximately a third of that ordinarily cast in the regular election. While this is probably a good deal larger proportion than would attend the old-style caucuses, it is much less than is needed to make the direct primary truly representative. Experience in Minnesota, however, has shown that the primary vote will increase very rapidly as people become accustomed to the system.

The high character of the six Superior Court judges chosen by the Rhode Island Legislature the other day, and Gov. Utter's recent speech advocating a moderate reform of the State Constitution, are among the signs that Boss Brayton's subjects are in rebellion. The independent newspapers of New England find themselves cordially endorsing the choice by the Rhode Island lawmakers of William H. Sweetland as chief justice of the Superior Court, and, as associates, Willard B. Tanner, Charles F. Stearns, Charles C. Mumford, George T. Brown, and Darius Baker. All of the six, except District Judge Baker of Newport, are Providence selections. The Boston *Transcript* reports that "an examination of the personal and professional records of the gentlemen who have drawn these judicial prizes, furnishes presumptive evidence of character, experience, and equipment sufficient to meet the requirements of these responsible positions." The *Times* of Hartford asserts that "Brayton's candidate for chief justice withdrew from the contest before the vote was taken, and the expected conflict between the boss and the State Committee did not occur." To the mind of the Providence *Journal* the choice of these men was "a vindication of the State as a whole . . . against those who have been wantonly vilifying the party leaders and the voters who tolerate them."

Gov. Utter's speech was also intended as a rebuke to those critics who have

censured Rhode Island as a boss-bound commonwealth. But he admitted frankly that the Constitution under which corruption flourishes needs revision. He pleaded for the veto power for the executive head of the State, pointing out, what has become a truism in other States, that, as the direct representative of the people, the Governor should have this restraining influence on legislation. Though he defended the small-town members of the State Legislature as no more venal than the representatives from Providence or Pawtucket, he admitted that these latter cities are not adequately represented. Again, after attacking the Citizens' Union plan for a constitutional convention, the Governor pronounced himself in favor of a different scheme—one providing for the automatic recurrence every twenty years of a convention for revision. These things—the breaking of Brayton's grip on the Legislature, the veto power for the Governor, and such an amendment of the State Constitution as will provide for a more "representative" government—are what reformers have been fighting for in Rhode Island. The Republican organization seems, for the moment, bent on showing what a saint the devil can be when he tries.

By a large majority the National Academy of Design has accepted the proposals of Columbia University to create under joint control a school of the theory and practice of art. The general lines of the federation now formally approved are so familiar that we need only recall that Columbia furnishes a site on Morningside Heights, that the Academy is to build a suitable building for its own schools of drawing, painting, sculpture, and engraving, and also for the Columbia courses in architecture, music, and the history and criticism of art. Both the University and the Academy schools will be organized as the art department of Columbia University, but the Academy will continue to maintain its own instructorships and to nominate the incumbents. The result will be a school of the theory and practice of art more rigidly academic in its management than even the École des Beaux-Arts and the affiliated schools of the Sorbonne and Louvre. Only time will tell whether scholasticism is an appropriate atmosphere for the growth of the artist. Meantime, the Academy solves the rather difficult problem of its schools, and is free to work for a central exhibition building. But this plan must wait until the mooted union between the Academy and the Society of American Artists is effected. If this federation should result in a worthy annual exhibition of American art, the general public will care rather little how the Academy schools were eliminated from the transaction. Finally, it should be realized that nothing like absorption of the Academy has been proposed or contemplated. Under the new arrangement, while entering into a partnership with Columbia which is terminable, it retains control of its present schools, and actually gains greater freedom to exercise its functions as an exhibiting body.

Coming, as it does, so soon after the opportune defeat of our own Niagara grab, the refusal of the Ontario Government to ratify an agreement permitting a Canadian company to develop 125,000 more horsepower from the Falls means much. Dr. John M. Clarke, the State Geologist, contributes to the April number of the *Popular Science Monthly* an article which expresses in mathematical terms his view of the present danger to the Falls. Dr. Clarke quotes "a competent hydraulic engineer" to the effect that the abstraction of 40,000 cubic feet per second from the flow, as measured in past years, will bring the water down to rock bottom on the American fall, and twice that amount will leave the fall entirely dry. The two active American companies are permitted to consume 16,300 cubic feet per second, the three Canadian companies 32,100. This makes 48,000 cubic feet per second out of a total of 222,400 feet, the average of forty years' measurements. The Niagara, Lockport, and Ontario Company, for whose benefit the bills of last year and this at Albany were drawn, would consume perhaps 10,000 cubic feet additional, and the projected power stations on the Canadian side, including presumably the plan just rejected, would have added 29,900. As it stands, according to Dr. Clarke, the use of water for power already authorized will leave the American falls "a weakly, thin, white apron of waters," while, had the American and Canadian companies been granted what they asked this winter, they would inevitably have destroyed the fall entirely on the American side, leaving, supposedly, ten feet of water or less on the Horseshoe.

That the Russian Foreign Office regards Washington and the Far East as merely two extremities of the same diplomatic lever is shown by the fact that Baron Rosen, whose most recent embassy was Tokio, is to succeed Count Cassini, who reached Washington by way of Pekin. The choice of two seasoned diplomats trained in Asiatic diplomacy is, in a sense, a compliment. To set against him their strongest men is a sign of the seriousness with which Mr. Hay's Chinese policy is taken at St. Petersburg. Regret for Count Cassini will be personal rather than official. Rightly or wrongly, a habit of mystification at the home office, and possibly a division of authority over foreign relations, makes the position of all Russian diplomats one of peculiar difficulty. For example, although correspondence of a frank sort is the rule between most chancelleries, it is immensely difficult to get written assurances of a substantial kind from Russia. Unquestionably, Count Cassini has suffered at times from the irritation aroused by his principals, and it is probable that diplomacy *à la Russe* can be continued more acceptably by another Ambassador. But Count Cassini departs with the respect due a loyal agent in a contentious transaction, and with the personal good will even of those who were his most vigorous official opponents.

Marquis Bartélemy, a concessionnaire at Kamranh Bay, lets the cat out of the bag. The Russians, he maintained, did not coal and provision through the French; they had no need to do so. Russia had previously bought a tract at the mouth of the Mekong, on which she established a great coaling station. "It was Russian coal on Russian ground," says the Marquis, "and it was loaded on Russian transports. No Russian warship loaded direct from the depot. There was no French violation of neutrality. France could not prevent the Russians taking their own coal from their own property." Upon the novel doctrine of extra-territoriality propounded by Marquis Bartélemy we are not impelled to linger. International law knows no way by which a belligerent can claim immunity for land serving other than a diplomatic purpose. Of course, the French Government could exercise over the managers of a Russian coalyard on the Mekong precisely the authority it could over a French coalyard. The real question is whether France exercised due vigilance to prevent her colonial possessions from serving as a naval base for Russia. In this matter, France has no counter argument against the Japanese protest except that, contrary to the practice of Germany, Great Britain, and the United States—which hold coal to be conditional contraband—France and Russia have never admitted it to be contraband at all. Accordingly, the local authorities at Saigon felt justified in assuming that a great deposit of coal, of whatever ownership and for whatever destination, was an innocent commodity, into the ultimate use of which no examination was necessary. We believe that if the Japanese should claim damages, as by the law of nations they may, an international tribunal would make short work of a plea so feebly grounded in common sense. It will be difficult to persuade the world that a great naval Power like France would have found herself in her present equivocal position, had she not considered that a lax performance of neutral duties sped the cause of Russia in the Far East. For the moment, M. Rouvier has obtained a vote of confidence from the Assembly on this subject.

NIMROD RAILROAD ECONOMICS.

President Roosevelt's Denver speech upon the matter of necessary railroad legislation had about it a very radical ring. Mr. Acworth, the most noted English railroad authority, had no sooner given his evidence before the Senate committee in Washington, on the 9th instant, as to the disadvantages of statutory maximum rates, than his arguments were scattered to the winds by the emergence from the wilds of the "mighty hunter before the Lord." Whatever an analysis of Mr. Roosevelt's plan discloses, the speeches of Secretary Taft before the International Railway Congress show clearly that the Administration is going to make a fight on the issue of entrusting the fixation of rates to a Federal commission. The prospect of a lively tussle between the conservative Senate and the Chief Executive adds piquancy to a situation which in itself is invested with unusual general interest.

One unacquainted with the Federal statute-book might imagine from Mr. Roosevelt's utterances that the whole matter of transportation was *terra incognita* to the lawgiver. Where single individuals or corporations control an important iron highway, it is absolutely necessary, in the President's judgment, that the nation "should assume a supervisory and regulatory function." It apparently lies outside the orbit of Mr. Roosevelt's thought that a very considerable degree of Federal supervision and regulation has existed for eighteen years. But it is wholly in keeping with his temperament to overlook the powers we have, and to fly lightly to others that we know not of.

As so frequently happens, the somewhat sweeping general utterances of Mr. Roosevelt acquire a certain degree of definition and precision when interpreted by the more experienced members of his official family. It is, therefore, to Secretary Taft's inspired description of the Administration's railroad policy that we must look for its precise features. The Secretary's first pronouncement in favor of the Government's setting rates was received amid universal silence at the dinner of the International Railway Congress. After the presiding officer, Mr. Stuyvesant Fish, had expressed his vigorous dissent to the general scheme, Mr. Taft in his rebuttal remarked that "what is proposed is only that in litigated cases a commission shall be constituted that shall fix a maximum rate." It is this concrete proposal on which careful attention should be focussed.

Under the law at present the Interstate Commerce Commission may order a carrier to reduce a rate which the Commission has found to be unjust, unreasonable, or unfairly discriminatory. The carrier may appeal to the courts, and continue the obnoxious rate until a final judicial determination has been made. Or the carrier may technically comply with the Commission's order by making an abatement differing by a fraction of a cent from the original rate, and subject the Commission to the endless task of ordering successive abatements. The proposed law would empower either the present Commission or some other Federal tribunal to set a maximum rate which becomes immediately operative, and so continues until and unless set aside by the courts. It must be remembered in this connection that the power to set a maximum rate in a particular instance is apt to be far-reaching. A single rate may be the ganglion of an entire network of interrelated rates, and, if disturbed, may serve to disorder an entire schedule. What are the possible consequences of this power of rate-fixing?

The maximum rate under the proposed scheme may on appeal be judicially determined to be unjust to the carrier. The greater number of cases appealed from our present Commission to the Supreme Court have been decided in favor of the carrier. Who is to pay the carrier for the loss of legitimate earnings during the continuance of a rate ultimately adjudged by the courts to savor of confiscation? A consideration of even greater practical moment attaches to the moral effect on railroads of the fixation of maximum rates by a Federal tribunal. The influences which determine the fixation of rates at present are the necessity of meeting competition by land or water at competitive points, and charging what each variety of traffic will bear at non-competitive points. If an abatement in rates will augment traffic and enhance earnings, the carrier grants the abatement. The average rate per ton-mile has steadily fallen under these conditions from 1.990 cents in 1870 to .763 cent in 1903. Let the railroads once fear that an external power may set a maximum rate, and they will probably proceed in rate-abatements with far greater caution. They will try to set rates as high as the tribunal will permit, and will not experiment with lower rates to catch new traffic for fear these low rates may be made a maximum by the Commission. Since Parliament set maximum rates in Great Britain, the tendency of the companies, said Mr. Acworth in his testimony, has been "to maintain rates at the high level."

The main count in the indictment against the President's plan, however, is not that it will fail of its mark, but that it is pointed at the wrong target. It is the secret rebate that is the chief evil in the present system. What guarantee does Government fixation of rates afford against secret rebates? Discrimination is now practised mainly in three forms—discrimination against some localities in favor of others, against some individuals in favor of others, against some classes of freight in favor of others. Discrimination of the second class is, of all, the most insidious and destructive of fair competition. Such discrimination is simply left untouched by the reformatory scheme of Mr. Roosevelt.

What is Mr. Roosevelt going to do about secret rebates? Here the law is ample. Has he proceeded against the individuals, shippers or carriers, who have violated the Elkins act? It is all well enough to say, as did Mr. Roosevelt in his speech, that his proposal, if enacted into law, would not precipitate the millennium. But while inordinate expectations may heap up "a store of incalculable disappointment," neglect of present remedies in the hope that new ones may avail will be equally disastrous. There is strong warrant for the disapproval of that man's pretensions who proposes himself king over ten cities on the ground that he has been unfaithful in that which is least.

OUR PEACEFUL TARIFF POLICY.

The Protean defence of our protective tariff policy is, in some ways, very like a conjurer's hat or a juggler's magic bottle. Is the martial spirit rampant? Then the demonstration quickly follows that the tariff provides us the wherewithal to flourish the Big Stick. Is a peace conference on the cards? Presto! here are the white silken ribbons of international good-will, in seemingly interminable lengths, extracted from the same receptacle. Do foreign nations snarl at our heels? The prestidigitator pours out heartening patriotic wine from his flask. Is it an international convention of men engaged in facilitating transportation? The loving cup is speedily filled from the same magical source.

Some such reflections must follow the analysis of Secretary Shaw's remarks at the dinner of the International Railway Congress. He truly says that there is no such disturber of commerce as war, and that as a nation advances in productive power the dread and abhorrence of the devastation caused by martial conflict increase. But instead of proceeding to develop what would seem the natural corollary, that whatever makes for increased international commerce makes as well for international peace and concord, the Secretary switches his oratorical powers upon the track of demonstrating that our tariff policy has invariably given no cause of complaint to other nations, because we are uniformly careful to cut down their trade with us to the narrowest limits.

Mr. Shaw apparently thinks that foreign nations are in equity bound to manifest towards us a spirit of friendly consideration because, "with few and unimportant exceptions," our markets give no special "preference to any country or to any epople." If this were historically true, it would at least be surprising. After a man has built around

his estate a ten-foot brick wall, and surmounted the top of it with iron spikes and the jagged edges of broken glass bottles imbedded in asphalt, it is not usual for the proprietor to imagine that the community must entertain for him a neighborly regard because he has provided with absolute impartiality the means to impale any one who would make friendly overtures to scale the barrier. But the Secretary's depiction of our tariff policy in the past will not bear a careful scrutiny. Apart altogether from the present reciprocity treaty with Cuba, which accords a preferential treatment of 20 per cent. on the main Cuban exports to this country, the so-called reciprocity provisions of the McKinley act were a thinly veiled means of waging a tariff war on certain countries. Where the President discovered that certain countries exporting to us particular products levied on our exports to them duties which he adjudged reciprocally unfair, he was empowered to impose a retaliatory duty upon their imports to the United States. It made no essential difference that our tariff club was labelled Reciprocity. It was, in short, an engine of tariff retaliation. Moreover, the present Dingley act provides specifically for the negotiation of reciprocity treaties, and thus sanctions in express terms the use of special tariff schedules as a means of dickering for preferential treatment in international trade.

How potent, moreover, in invoking the hovering presence of the white-winged Angel of International Peace is a schedule which reduces to beggary the tin-workers of Cornwall or the button-makers of Saxony? So long as certain of our tariff duties are avowedly constructed with the intention of driving from the field our competitors in particular nations and in particular branches of industry, it savors either of ignorance or hypocrisy to pretend that our infrequent resort to technical, preferential treatment of particular nations justifies us in posing as "juster than the rest." The Secretary's proud boast that "the United States has never yet levied retaliatory tariffs" is, only with marked exceptions, accurate as to the letter; in spirit and in truth it is essentially false.

Passing over the ill-concealed threat which the Secretary's speech implied, that we should refrain from openly discriminatory tariff legislation only so long as other nations did the same by us, there is another aspect of the bearing of our tariff upon peace which cannot be overlooked: we mean the effect of our present system upon our internal tranquillity. Not only do such tariff monstrosities as ours tend to embroil us with our neighbors abroad, but they create social unrest and dissension at home. It was Bishop Mackay-Smith, in his recent address on "The Church and Public Brigandage," who declared that while we shudder at the corruption of past ages, yet, in our day, "we virtually say that out of a thousand desirable commodities in life, not one shall be imported into America without the consent of a little group of men who have gotten control of that particular manufacture among us." Let us clear our minds of cant in this matter. We have employed our tariff legislation in an unqualifiedly and undisguisedly selfish way to better our own supposed interests, irrespective of the suffering or injury imposed on any other nation. In our selfishness we have shortsightedly overreached ourselves. And we are now paying the cost not only in being subjected to the tariff retaliation of other countries, but in discovering the viper's nest of discontent among our own people.

A RACE BOGEY.

Mr. Sydney Olivier, an English Colonial official, who has for three periods been acting governor of Jamaica, contributes to the April *International Quarterly* a remarkable article on the race question in this country. In writing of "The White Man's Burden at Home," he has the obvious advantage of being a trained foreign observer, free from the prejudices and passions which are apt to beset those who treat at close range the racial relations in America. But Mr. Olivier has not been content to get his opinions about the attitude of the whites towards the blacks in the United States from books or newspapers. On several occasions he has studied the question on the spot, impelled not merely by a personal interest, but by his duty as a Colonial official, to watch recent developments affecting the colored people.

Mr. Olivier does not hesitate to say that on these visits he has found himself "unable to account for an attitude of mind toward the race question which impressed one as superstitious if not hysterical, and which would appear from the tone of the Southern press to prevail widely in America." This is not because there is no race prejudice or hostility towards black people in Jamaica. But such antagonism as appears is unquestionably diminishing, so Mr. Olivier reports. Moreover, a Jamaican of mixed race is not debarred from occupying any position in the social life of the island, including the public service, for which he is qualified. Although the negroes and mixed bloods are in an immense majority (there are but 15,000 whites in a total population of 700,000), it has never been necessary to defend race purity by forcing the individual negro of merit or the race as a whole into an inferior position. Colored men are landowners, clergymen, doctors, and lawyers. Many colored men are magistrates, and some are the chief magistrates in their parishes. The majority of the negroes are peasant proprietors or employees on sugar plantations. Those who rise to high position "associate with the white residents on precisely the same terms as persons of pure European extraction."

Now, according to the theory prevalent in the Southern States, this condition of affairs should have but one result—the decadence of the white race. This has not been the case. While there has been and is intermarriage, especially between colonists of Irish, Dutch, or German origin and negroes, as also between half-whites and women of pure European blood, this ex-Governor of Jamaica has been "unable to recognize that any sort of evil has resulted from their intermarriage: I should rather say the contrary." What is still more important, Mr. Olivier does not find that "social and professional equality between the two races, when resulting from compatibility of temperament and interests, conduces necessarily or strongly to a likelihood of intermarriage." Among the white creoles in Jamaica and other colonies there is a strong repugnance to intermarriage with darker peoples. But as to the mixed race being necessarily "degenerate, deficient, and decadent, both in physique and morals," Mr. Olivier admits that, although he went to the West Indies for the first time sharing the prejudice of this common theory, he has found it impossible to sustain the view after studying the question in Jamaica, Honduras, the Leeward Islands, and elsewhere.

Mr. Olivier has even less sympathy with those persons who would countenance social injustice in order to prevent social equality. As an administrator familiar with judicial statistics, he finds that assaults by black or colored men on white women are practically unknown. The only terrors of Jamaican highways are the white runaways from European vessels. Women and children often live for months on plantations without white protectors, surrounded by colored people. There have been, Mr. Olivier reports, "no savage punishments here, no terrorism, no illegal discriminations against the colored." And he adds significantly, that in his opinion the propensity to the assaults most dreaded by whites south of Mason and Dixon's line is actually stimulated by the very attitude of the whites. He agrees with many psychologists in affirming that there is maintained "a constant storm of suggestion to the most imaginative and uncontrollable of passions in an excitable and imaginative race." "When a class," he continues, "makes the preposterous and self-damnatory announcement to another, *whose women it has continually made the mothers of its own offspring*, that it is of an inferior order, there immediately is aroused all the self-assertiveness of the human claim to equality which is

as fundamental in the African as in any other race." Evidently, Mr. Olivier has been in the South, and has viewed with amazement that double standard of morals which in most circles makes it perfectly permissible to disregard the purity of the negro race while prating vehemently about the need of defending, at any cost, the purity of the women of the white race.

On the political side of the negro problem, Mr. Olivier feels that the bestowal of suffrage upon the newly emancipated slaves was a mistake, and naturally resulted in efforts to cut down the negro electorate "by methods constitutionally indefensible and unjust." But the resulting conditions fill him with alarm. The whites' holding of their position by means of unjust devices gives the negro race "a permanent plea of injustice," and results in a situation "demoralizing in the extreme." Mr. Olivier is even well enough versed in our affairs to see that, in order to justify its position, the minority is "almost inevitably compelled to blacken the character of the colored majority and depreciate their abilities by all kinds of misrepresentations." A truer word was never said on this point. The resulting situation, as Mr. Olivier sees, stimulates hysterics, which vent themselves in "outbursts of lust of blood and torture," and result "in social terrorism and obscurantism." Finally, Mr. Olivier's opinion that the pressure of this terrorism is so great that "sane men in America keep silence, or at best half-silence, in the face of an increasing negrophobia which appears to be developing into a national danger," constitutes a serious warning to be taken to heart by all who believe in the continuance of truly democratic institutions.

A REACTION TOWARDS THE THREE R'S.

"The Proceedings of the Eighteenth Annual Convention of the Association of Colleges and Preparatory Schools of the Middle States and Maryland" are not precisely light reading, but the discussion of the simplification of the secondary-school curriculum is pointed and of general interest. Without a dissenting voice, college professors and school teachers agreed that the high-school course has become badly congested, and that the present glut of subjects produces distraction in the teacher and queasiness in the student. President Warfield of Lafayette College illustrated the case by a personal experience: "When my oldest child reached the stage in the grammar grades of the public school that he rose from ten to eleven subjects, I despaired." By especial arrangement the lad's schedule was reduced to four subjects—Virgil, Greek, German, and algebra, upon which rational diet he is now thriving.

To appreciate the absurdity of such a regimen for lads and lasses, one need only recall that five or six subjects simultaneously is a maximum for college students, who are presumed to bring to their diverse tasks better disciplined minds. Even with the deduction of subjects nominally of a recreative nature—drawing, singing, gymnastics, physical culture, and the like—the remainder is a portentous educational bolus for any young person to swallow. The *reductio ad absurdum* of the theory that every high-school pupil should seek a Baconian grasp upon all knowledge, was furnished by Miss Haeseler from the record of the Philadelphia High School for Girls. To meet the demands of educational theorists, "one thing after another was introduced, until, finally, we had a course with cooking and sewing at one extreme, three languages and six sciences at the other, with several commercial subjects in between, besides English, mathematics, history, drawing, music and calisthenics." Happily, the burden was so palpably excessive in this case that the unloading process was prompt; the commercial courses were transferred to an especial school, cooking and sewing gave place to the old-fashioned studies, three foreign languages were reduced to two, and the curriculum became, if still overweighted, yet practicable.

Generally speaking, these teachers noted with praise a tendency to simplify the excessive programmes of ten years ago, and there was much enlightening comment on the causes of what might be called the "haggis" theory of secondary education. It was agreed that, in part, merely the experimental mood of America was responsible. As a people, we dearly love to try things, and in gratifying this passion we have not spared our most revered institution, the public school, having stuffed into it more than it will hold. Furthermore, the public schools are under the strain of providing three curricula—one suitable for the high-school graduate who pursues his studies no further, the others for the student preparing for college or technical school. Thus there has been a double source of congestion: first, the high-school course has been inflated through a false analogy with the college, and especially through a kind of travesty of the elective system; while, second, as the college requirements and those of the scientific schools have been diversified by the substitution of other studies for Greek, by the addition of sciences, etc., there has been great pressure to introduce a similar diversity into the secondary schools.

A great variety of studies, then, must exist in the high schools, whose practical problem is to see that no student gets more than a fair stomachful. In other words, teachers must eschew so-called election, and hold their students to logical groups. On the possible harm of the elective system Professor West of Princeton spoke the following pungent words, which, however contestable in their application to the colleges, are unquestionably valid for the secondary schools. The elective system, he said, is "no system, and not elective."

> "It is not a system, because under it the studies are arranged on the basis of a grand negation—a doctrine of impotence on the part of the university to find out what ought to be first, second, third, and so on, in the order of studies. And it is not elective, because it rests on the student's caprice, and, as one brought up in an old Calvinistic boyhood, I do not understand that this easy-going caprice was what was meant by election."

How necessary such a recall to some principle of selection is, a statement of the reformed and simplified course of the Philadelphia High School will show. All students study during the four years three branches of mathematics, four of history; English, including grammar, rhetoric, composition, and literature; drawing, music, botany, biology, chemistry, physics, physiology, physical geography, and two out of the three languages, French, German, and Latin. To touch upon merely one item, the amount of half-baked, epitomized science with which these Philadelphia schoolgirls are crammed, is enough to make an impressionist out of a Herbert Spencer.

The ultimate cause of this profusion Mr. James G. Croswell of the Brearley School based most philosophically upon our superstitious attitude towards education in general. Failing to perceive its true aims and limitations, we expect of it what can only be furnished by the training of home or the subsequent discipline of life. We expect the child to work out his personal salvation in the short school years, or not at all. Against this fallacy he made a convincing plea:

> "Let us beware of treating the school curriculum like a bottle of some mystic elixir of life; let us not feel that the school curriculum must cover the whole of a child's existence, and give him all his life. . . . You all know what I mean; you know that it is our professional temptation to try to get hold of the whole of a child's life. Teachers often resemble too much in their theorizing people who found hospitals for the abnormal child; we do not trust the American boy to look after any part of himself at all. Now I do not believe personally, from the children I have seen and the children my friends and I were, that childhood now needs so much extra attention from theorists as it is getting."

A little reflection upon the men that were produced under the narrow dispensation of the three R's in the schools, and of Greek, Latin, mathematics, metaphysics, with a modicum of science in the colleges, would show that our American optimism were best proved, not in making the school a substitute for life, but in trusting much to those extra-scholastic processes of education which lie at every man's hand. Such a view will lead to simplification and thoroughness in the curricula of the schools, or, as Professor West cogently summed the

matter up, "The new and hopeful force now beginning to work is a plain, old-fashioned, but very much neglected thing. It is the common-sense of parents, teachers, and pupils, slowly gravitating toward the grouping of a few things of first value, a few central studies taught amply by the best teachers procurable, and conspiring to one end—a great, far-acting and almost forgotten end, namely, an education."

LOQUITUR MR. BALFOUR.

Question time in the House of Commons permits a variety of topics and a discursiveness of tone that go far to relieve the rather sedate proceedings of the mother of parliaments. Sometimes an equestrian member calls the Government to account for the mud in Rotten Row; contrariwise, a question may evoke one of those brief but comprehensive surveys of world politics in which Mr. Balfour excels. Thursday, when the topic of imperial defence was up, furnished such an occasion.

We pass, as of merely technical interest, his project for concentration of the fleet. Such a policy is wholly in line with modern ideas of warfare, which draw the first line of defence, not at the stations of the respective squadrons, but at the points where they can surely deliver an effective attack in the event of war. From this point of view the dispatching of fighting units to distant station service is, in an emergency, an unfortunate dispersion of forces. Of more general significance was Mr. Balfour's comment on the employment of mines in defence. These he considered rather an embarrassment than an aid to a strong naval power, maintaining that loss was as likely to occur to the home squadron from accident as to the enemy from design. On the matter of floating mines in the high seas Mr. Balfour declared his disapprobation with energy. The case, he held, called for an international conference, and for an authoritative prohibition of a practice so inhuman and so dangerous to neutral shipping. In submarine boats, however, Mr. Balfour recognized a means of defence against hostile invasion quite as effective, boat for boat, as ships of the line.

Why the invasion of England should be a periodical cause of apprehension, it is difficult for an American to imagine. One would suppose that an immunity running for more than eight centuries of frequent warfare would have laid that bogey. That it persists, is a sign of the extraordinary capacity for uneasiness which characterizes the island race. Thus, all England from time to time contemplates in abject melancholy the destruction of its commerce, and foemen swarming up through Kent to London Bridge. The sentiment is so thoroughly British as to be almost respectable, and Mr. Balfour demonstrated with considerable gravity that, in Lord Roberts's judgment, it would be a bad business for less than 70,000 men to attempt to land on the Tight Little Isle, and that even so many would hardly get to Billingsgate.

Of more than insular concern was his statement that the Government is on the alert in Afghanistan and fears no surprise in that quarter. On the other hand, Mr. Balfour admitted the failure of diplomatic attempts to check the Russian advance, and estimated, on Lord Kitchener's authority, that, in addition to the regular Indian levies, a contingent force of eight divisions, say, about 80,000 men, should be in readiness for that service. Any diplomatic wavering in Afghanistan would greatly increase the expense and difficulty of the permanent defence of India. The inference was plain that the Government would stand firm at the Afghan border; at this point relinquishing, if necessary, that policy of Platonic protest in the face of which Russia has progressively absorbed all Western Turkestan. The general subject used to be one of considerable irritation to Lord Salisbury, and it is refreshing to find that Mr. Balfour takes the coolheaded view that the Russian advance is instinctive, and not based upon a deliberate plan for the invasion of India.

We have followed Mr. Balfour's somewhat discursive talk at length because it hints at elements of strength in the foreign policy of a Premier whose home policy stands sadly discredited. For the present it is likely that Mr. Balfour will direct the attention of England outwards, that the intentions of the Turk and Greek may compete with the protestations of "passive resisters." It is always an effective argument, applied usually in time of war, not to swap horses when crossing a stream, and Mr. Balfour undoubtedly has a strong apologia at command in pointing to important foreign business yet unfinished, and asking, "Do you wish to turn over to the Little Englanders the renewal of the Japanese alliance, the negotiations at Fez, and the fiscal reforms in Macedonia?" However disingenuous such a challenge, it has a certain political effectiveness, and it has the unquestionable advantage of diverting attention from the seamy side of the present Administration to that fair surface on which are embroidered Mr. Balfour's and Lord Lansdowne's diplomatic achievements. It is possible that the record and prospect may hearten the wearied rank and file of Unionism, and somewhat diminish the urgency of the Liberal attack. But the best Mr. Balfour can hope to do by putting forward his foreign policy as his best card, is to obtain a respite from the Nemesis gathering because of his educational policy at home, the Chinese labor act in the Transvaal, and his lukewarmness before the dilemma of protection or free trade.

THE INTERNATIONAL RAILWAY CONGRESS.

WASHINGTON, May 15, 1905.

Section Four of the International Railway Congress, which has just closed, dealt with the principles upon which railroad rates should be based, and railroad bookkeeping, wages, and provident institutions conducted—subjects of more than ordinary interest at the present time. They were all, however, treated more or less from a theoretical point of view, and the resolutions reached were invariably of a general and academic character. Still, there was an almost unanimous concurrence of opinion, among representatives of State-owned as well as of private roads, that the less Governmental interference the better. The South Australian delegate, whose Government owns and absolutely controls the railroads in all their departments, said that the principle upon which the colonial authorities acted was that the railroads must pay 3½ per cent. net revenue. When business was brisk, the rates were low; but when business was dull, in order to secure that return on the capital invested the rates were simply raised—a method which would be rather difficult to apply were the Government here to own the 210,000 miles of roads running through sections one of which might be prosperous and another the reverse. The representative of Indian railroads complained that the Government of India not only fixed maximum rates, but, in order to insure a return on the capital invested, hampered the railroad transportation with minimum rates. The result is that, with the enormous increase of business of late, the minimum rate has become an actual detriment, not only to the growth of traffic, but likewise to the revenue of the road, as the main line between Delhi and Calcutta, if rates were lowered, would return, through augmented traffic, a larger net revenue than at present. The Government, though urgently appealed to, has heretofore refused, out of timidity, to either abolish or lower the minimum rate.

But the discussions out of Congress were, we believe, decidedly more animated than those in the Congress itself. At the opening of the Railroad Equipment Exhibit this peaceful and peaceable assemblage was addressed by the two belligerent members of the President's Cabinet, the Secretary of War and the Secretary of the Navy. That the Secretary of the Navy should have referred to the subject of railroad rates is not to be wondered at. The Secretary of War poked mild fun at his colleague on the subject, but did not give any intimation of the outburst of threatening advice to which he treated his hosts at the banquet given by the American Railroad Association. The subject has been so thoroughly discussed in the public press that it is hardly necessary to reflect upon the apparent discourtesy of charging American railroad men, before their foreign guests, with influencing legislation, presumably by illegal and improper methods. The anomaly was so palpable that a Hungarian delegate, who made the final speech, commented on the peculiarity of American dinners, where, instead of fun

and conviviality being the prominent features, political discussions were indulged in. Presumably, however, Mr. Taft appreciated that it was the only occasion on which he would have an opportunity of emphasizing the views of the Administration before a large body of American railroad men.

There is apparently a curious divergence of opinion between the railroad men and the people at large, if the Administration expresses the public sentiment. Railroad men claim, what every one admits, that rates, as a rule, are low—lower, in fact, than in any other systems of railroads in the world. They claim that secret rebates are seldom given, and, if given, could be no more easily detected under the Townsend bill than under the existing Elkins bill; and that where unjust rates are made, the present law offers the injured party means of redress. Secretary Taft wittily remarked that that is true, but that, for instance, a town against which discriminating rates had been published could probably not obtain relief within five years, by which time, if it were situated in the Middle West, it might be blown away by a tornado.

On both sides there has certainly been a great deal of oratory and ill-temper, very little calm argument, and still less production of facts. That comparatively few cases have come before the Interstate Commerce Commission in the past is used as an argument to prove that comparatively few individuals or localities have considered themselves sufficiently injured to make it worth while appealing to the Commission or the courts for redress. There is no doubt, however, that if more summary jurisdiction were given to a court, and the method of procedure were simpler, there would be more appeals. Whether those appeals would in most cases be decided in favor of the appellant, may well be doubted. It is probably true that the great body of the shippers are satisfied with existing rates. But as long as there is water, and there are centres of land competition, discrimination against a short haul and in favor of the long haul will excite local complaints. To adjust this anomaly was the chief motive for the creation of the Interstate Commerce Commission, and yet, when that body came to consider all the conditions, it justified the railroads in not carrying freight on a mileage basis irrespective of length of haul and terminal distinctions.

Whatever wrongdoing may be occasionally committed, railroad managers should not, as a body, be charged with deliberate and persistent crime. They are trying, with all the experience they possess, to adjust one of the most intricate problems which can face any body of men, that of making rates for two hundred-odd thousand miles of railroad, running through districts whose interests are not only varied, but in many cases distinctly antagonistic. And they are doing this in a manner to return some profits to the shareholders, while developing the territory which their roads traverse and supply; for, of course, on the prosperity of the country which they serve depends the volume of traffic, and, conversely, as is admitted by all, the railroad itself is the most important factor in creating that prosperity. The position of any body of men endowed with the functions which the traffic managers of the country now fulfil, will be that of politicians out of office when they become politicians in office. Out of office the politician, dealing in generalities, can right all the wrongs that the body politic is suffering from. As soon as he is brought face to face with the actual maladies of the patients, and when life or death depends upon his treatment, he finds that the task of curing them is not as easy as he supposed. One thing the commission of Rate-Makers will discover is, that no high-and-dry rule can be applied, or they will kill the goose for the golden egg. They will find that to secure low rates there must be large volume of traffic, and, to secure a large volume, some of it will have to be carried at less than cost, if even reasonable rates are to be imposed for the remainder.

Most railroad men deny that actual private rebates are given to any extent. If they are given, nothing but a rigorous Government audit will prevent them, and this could be made without affecting rates; and if rebates are given, it is doubtful whether they are given more to the large shipper than to the small, for as a rule the large shipper has sufficient influence to secure what he wants and induce the railroad to publish the rate. It is probably the fact that the extraordinary decline of late years in published rates has been secured through the influence of the big shipper, and that the small shipper, if able to do so, has thus benefited by it. The desire of competitive lines to secure the freight of a big shipper has induced public rate-cutting between competitive points. If the big shipper be on a single line of railroad, the dread of exciting and creating a competitive line is as potent as competition in securing low published rates. The big shipper with a large volume of business can thus influence the transportation company when the small shipper would be helpless. That the small man is weak and laboring under constantly increasing disability in this as in other respects, is due to the modern tendency to consolidation. This is his misfortune, and it is perhaps ours, but the railroads are certainly not to blame for it. Under any act the big shipper, through his personal influence and the vast volume of business he contributes, will secure attention, whether the rates be fixed by a traffic manager or a Government commission, and the small shipper will benefit by the energy and power of his more important competitor, and should be thankful. This is on the assumption, which is generally admitted to be true, that the rates he secures are made public and are applicable to all. But if, by private-car line, industrial termini, and too great disparity between full and broken carload rates, he is discriminated against, legislators should devise some method of speedy relief.

There may be great hardships inflicted on the public by this means, but as yet the public has been supplied with remarkably little accurate information. Strange to say, the most costly of all monopolies to the public at large is the Pullman Company's control of through sleeping traffic. But the public complacently submits, perhaps because it thinks it actually knows the worst. The Senate committee has been collecting some information and a great many opinions and a large volume of advice; but before new courts are created and new commissions, with summary powers, are organized, it would seem to be the part of prudence that the public be supplied with actual facts, not on the authority of political orators, but given by witnesses who can testify whereof they know under oath. The result might possibly be as unsatisfactory as Mr. Garfield's report on the Beef Trust.

AN OBSERVER.

THE NEW TOMB AT THEBES.

HARTFORD, Conn., May, 1905.

Every tourist in Egypt knows the valley of Bibân el-Mulûk—the Tombs of the Kings. Every tourist has felt, willingly or unwillingly, the spell of mystery and silence and desolation as he followed the winding paths that led him away from the smiling green fields, up the gently sloping track marked out by the Pharaohs of old, through fold after fold of orange cliffs, blazing under the blue sky. No blade of grass relieves the glare of those dead hills; no living thing is to be seen on their bare sides. A kite, perhaps, hangs motionless in the blank overhead, breaking the silence with his shrill whistle, but other life or motion there is none. Shut in from all the world, the kings of Egypt were laid in their tombs to await their resurrection. The centuries passed on. Some of the tombs were remembered by the priests of later days, and the bodies of them removed for greater safety to the other side of the hills, where they were rediscovered some twenty years ago. Others have been forgotten, and, hidden under drift of limestone rubbish, have waited to reward the patient excavators of to-day. Among these were the tombs of Thothmes IV. and Menephptah, and Amenhotep II., and such was the tomb the finding of which has sent a thrill of excitement through archæologists this winter.

In February of this year the new tomb was uncovered by Mr. Davis, an American, working on a site in the Valley of the Tombs of the Kings pointed out to him as "likely" by Mr. Quibell of the Department of Egyptian Antiquities. The tomb itself was of little importance, being small and undecorated, but its contents were of such beauty and value historically and archæologically as to form some basis for the absurd rumor current in Luxor that the solid gold discovered was worth forty thousand pounds.

When the doorway was uncovered, it was observed that one corner of the masonry that blocked the entrance had been tampered with. A little three-cornered hole had been made, just large enough to allow a tomb-robber to creep through, and this had been filled again with small stones and rubbish. Had this robbery been made in the days when the gods of Egypt held sway or by modern Arabs? The importance of the question lay in the fact that ancient robbers would not dare to disturb the essential amulets and charms left for the preservation of the dead, and would confine their thieving to gold, while a modern would be limited only by the size of the treasures he was able to carry away. To the fact that the theft was an ancient one is due the preservation of so much that is valuable to-day. These ancient robbers had crept through the little hole, dragging down with them a good deal of dust and rubbish, which lay scattered about when the modern

excavators broke in. They had broken open the great outer coffins of black and gold with a sharp stone, which stone, marked with the paint of the damaged coffin, testified against them. Much of the costly jewelry that decorated the bodies, they had carried away; the little that remains bears witness to the value of that ancient raid. The gilding from the state chariot they stripped off, throwing it upon the carven bed, and then they crept out of their little hole, which they filled with rubble, and so it remained, lost and forgotten, until to-day.

When the moderns opened the sealed door, they found what confusion might be expected after that hasty burglary. The triple coffins lay open, the covers lying this way and that, and the mummies, partly unwrapped, lying in the broken coffins. Near by were great chests, open also, holding alabastar jars with provisions for the dead to use upon their journey to the judgment, and further, being "justified," to sustain them in the fields of Aalu. Honey, still viscous in a sealed pot; meat, mummied to ensure its preservation and presumably not unpleasant for a mummy to eat; grain in pots, as yet unopened, of alabaster, stone, and glazed earthen ware; great earthen jars filled with numberless little pots all tied up in linen, and little packages, linen wrapped, of food or gifts for the mummy and his wife. The chariot mentioned above lay upon a carved bed, where the ancient robbers had thrown it when they tired of pulling off its gilding or were frightened away from their plunder. It was broken, but all the parts were there, the wheels, the pole and yoke for the horses, the high front and sides of embossed and gilded leather. Near by stood a chest of wicker work with a movable tray, a veritable basket trunk of B. C. 1500. There were chairs of carved and gold-decorated wood, coffers and boxes carved and gilded, and three great beds not unlike the native *angaribs* of to-day; the bed made of wicker work, the head-boards and legs of wood, all of the same lavish magnificence, carved, painted, and gold-covered. The triple sarcophagi, too, were of the utmost magnificence. The outer one, in each case a great chest of wood, was painted black, with bands of decoration in golden figures. The two inner coffins, shaped to fit the bodies, were of black and gold, while the inmost coffins of all were wholly overlaid with gold except for the jewelled necklaces about the necks, which were made of carnelian and glass, inlaid upon the wood.

And within all this magnificence lay the mummies themselves, wrapped in the finest linen that has yet been found in Egypt. What jewels they possess, such as the plate that covers the heart incision and replaces the heart, were of purest gold. The tomb robbers did not find all, or did not dare to take the essential amulets from their owner.

In the corner of the tomb was a heap of down and feathers, the remnants of luxurious cushions; and these were almost the only things that the dry air of the desert has failed to preserve, for the covers fell to dust when disturbed. Among all the treasures and tokens of wealth and magnificence, tokens of good will from princely friends, it is interesting to note one humble offering: at the entrance lay a heap of dried and withered onions, the common "bassal" of the fellahîn, left there, perhaps, by some humble friend of the dead. And the mummies themselves?—great people, surely, by the evidence of all this magnificence. The Egyptologists read the hieroglyphics on their coffins with excitement and growing wonder and delight, for they had found the bodies of the father and mother of Queen Thyi, the rulers of Mitani, that country "between the rivers" whence came the princess, their daughter, to marry Amenhotep III.

Now, Queen Thyi is perhaps the most interesting woman in all Egyptian history, not excepting Queen Hatshepset or the attractive, if disreputable, Cleopatra. What has been known of her was briefly this: She was a princess of Mitani (thought to be Mesopotamia), and the wife of Amenhotep III., whose date in the history books is roughly B. C. 1500. She appears to have been a much-loved and possibly an only wife. As Queen of Egypt, she was obliged to conform to the State religion, which regarded the king as high priest and incarnation of Ra upon earth; but from her after-life it is evident that she never forgot or really laid aside the simpler beliefs learned at home from this stern-looking Semitic father, the owner of the new tomb. Her son, Amenhotep IV., was associated with his father and succeeded him, and at his accession Queen Thyi's real power began. Under her guidance, her son threw aside the religion of his father, the worship of the gods of Thebes, the family of Amen, and in its place instituted the worship of one god, typified by the solar disk. He did his best to stamp out the ancient Amen worship, changing his own name from "Amenhotep" to "Khenuaten," and even cut out the "Amen" from his father's name in Luxor temple. Finally, he and his mother removed their court from Thebes, the priestly city of Amen, to Tel el-Amarna, where they built a temple to the sun disk, and from whence come most of the curious reliefs of the heretic king and his mother worshipping the life-giving disk of the sun.

The finding of these mummies makes clear this much at least: the parents of Queen Thyi were foreigners—witness the name on her father's coffin, which was spelled in three different ways, showing that the Egyptian scribe was puzzled in his transliteration of a foreign name. When the faces were unwrapped, while the woman's, small and delicate, suggested a French woman's in its refinement of type, that of the man was of extraordinarily Semitic cast—a strongly marked hooked nose, heavy brow, and large mouth, with full lips; a face of great power, but not bearing the remotest resemblance to the Egyptian type. A curious detail noted was that the locks of hair remaining were distinctly red in tint, and that there was a two days' growth of beard on lips and chin.

There lay the ruler of Mitani and his wife; but why were they there? Did they come down, like Jacob, to end their days in Egypt, where a beloved child had met with rank and honor? Had they lost sway in Mitani, and sought a refuge in Mizraim, or had they merely come to pay a state visit, and, dying in this foreign land, were buried with such honor as the Egyptians knew how to bestow? The burial was evidently during the reign of Amenhotep III., because the fashionable site for a tomb was then at Thebes. Later, when Khenuaten held sway, the great people of the land were interred at Tel el-Amarna. There is some evidence to show that this was a temporary resting-place only. The great wooden coffins, in their magnificence of gold leaf and black, were still standing on the black sledges that had brought them there, all ready to be dragged up again to the light of day. Perhaps there was a magnificently decorated tomb preparing for them elsewhere, which they were never to occupy, or perhaps this strange king went to his grave, intending, like Joseph, that his body should return to his own land, with all its treasure, its provisions, and its furniture. Who can say?

It seems a pity to have to record that all these wonderful things are now in Cairo, and, after they have been unpacked and examined and written about and discussed, and the museum has been rearranged and enlarged, will be exhibited there. In the present state of the country no other course is possible, and precautions unheard of in law-abiding countries must be taken for the preservation of every find. The danger of thieves among the workmen, or from the neighboring villages, and even of an armed raid from Bedouins encamped beyond the hills, made a guard of soldiers necessary at the tomb from the first moment of its discovery. The head of the Department of Egyptian Antiquities at Luxor, his assistant, the archæologists at work excavating at Theban sites, and two volunteers selected by the head, took turns at watching the tomb, sleeping at the door, and never leaving a packing case or a funerary jar unwatched; and unless it were possible to keep up these extraordinary precautions winter and summer, the treasure must necessarily be taken to a place of safety. Four or five years ago a particularly perfect tomb was discovered and opened. It had remained undisturbed through the ages since the priests had sealed it, as they hoped, forever. The flowers strewn on the coffins still lay upon them, and the boats to ferry the dead stood ready for launching with their freight of bodies. So perfect and undisturbed was this tomb that, by special request of Lord Cromer, most of the funeral furniture was left in place, an iron gate set at the door of the tomb, and a guardian installed to keep the key; and within a week the tomb was broken into, one of the great funeral barques removed, and the mummy, that lay in state upon it, thrown down and broken to bits. Nearly everything that remained in that tomb was then taken to Cairo, and until civilization reaches farther into the desert, until tourists and Semitists and great European museums cease to seize every possible chance to acquire stolen antiquities, the tombs must be rifled by the authorities themselves, and their treasures placed in safety.

It was an immense piece of work to pack every jar and box and chair of the new tomb, to say nothing of the enormous coffins, so that they could be safely carried down over the four miles of desert and green fields, on camel, on men's shoulders or on rollers and temporary rails, across the river to the trains waiting to carry them to Cairo. The work was interrupted not once or twice, but again and again by visitors and grandees of varying magnitude. Nominally no one was allowed to see the

tomb, but every archæologist from up river and down, from the east bank to the west, holders of private concessions and members of the archæological departments from every nation of Europe and from America, considered himself an exception and was courteously admitted. The head of the Department of Egyptian Antiquities came at once to the spot to see whether the discovery amounted to anything; and, on assuring himself of its value, arranged that the Duke of Connaught, returning from an official visit to Khartum, should "open" the tomb as he passed through Luxor. The Duke's party having departed, orders were given to pack everything at once so as to get the treasures safe to Cairo as soon as possible; but the work had to stop again for another English duke, and again for an earl to see what was to be seen, and once more to admit Eugénie, ex-Empress of the French.

There was one delay, however, that is delightful to record. An American artist who was present at the opening of the tomb was allowed to make a sketch of the interior as it first met the eyes of the excavators. He has recorded on canvas just how the tomb robbers had left the huge sarcophagus of gilded and painted wood with the covers broken open and the mummies lying in the wreckage; and, further, he has made two exquisite pencil drawings of the faces of the two mummies, the delicate refinement of the woman's contrasting with the rugged strength and power of this ancient king of Mitani. Perhaps, at some future day, when Egyptians have become a law-abiding nation, his sketch may be used as a guide, the treasures restored to the tomb as they were before, and the king and his consort permitted to sleep there again in peace.

LIVING WAGES FOR PROFESSORS.

TO THE EDITOR OF THE NATION:

SIR: Mr. Carnegie's gift of ten million dollars to found a pension fund for the benefit of aged college teachers implies the strongest possible criticism of their present position, and furnishes one of the strongest arguments in favor of proper payment for them. Government servants—in other words, servants of the people—may look forward with no loss of pride to retiring on pensions in old age; for if they and the people agree to accept and to give a low remuneration for years, on the understanding that the survivors will be taken care of, it is their affair. There is also no wound to a man's pride in taking service in a college and agreeing to accept a lower salary for years in order that, in his old age, he may be sure of support by the college which he has faithfully served. But the endowment of institutions for the care of the sick, of the infirm, of the feeble-minded, and of college professors is an entirely different affair. Circumstances beyond their control fix the fate of the feeble-minded, and this is also true in many cases of the sick and infirm. Society should take care of such. But do circumstances beyond their control fix the fate of college professors also? Is it inevitable that they must become public charges unless cared for by relatives or friends? And if this be true, what circumstance or circumstances make this inevitable?

As shown by "G. H. M." in an article in the May number of the *Atlantic Monthly*, a college teacher who is married and has any children must supplement his salary in some way or other lest he run into debt. This is pointed to by Münsterberg, in his 'American Traits,' as a grave defect in our educational system, turning aside men, young as well as older, from the investigations which they have the training, the mental ability, and the desire to pursue, to work which will yield a pecuniary and more immediate return. Thus we have successive crops of more or less admirable school-books written by college professors. These books, if successful, yield large returns to the authors as well as the publishers, but they contain few, if any, real contributions to knowledge. Many college teachers deliver addresses on all sorts of occasions, and for all amounts of pay, by this means adding to their meagre incomes at a sacrifice of time, of strength, and of the continuity of scholarly work which they and their colleges can ill afford. A fractional part of the whole body of college teachers is engaged in work more or less in demand by the business world. Engineers, chemists, physicists, geologists, and even biologists of certain sorts, are consulted as experts from time to time about practical problems, and receive corresponding remuneration. Some of these men may employ the long summer vacations in well-paid work; others, by taking leave of absence for a year or two, may in that short time recoup themselves for the small return of years of teaching. Most college teachers, however, have no supplementary income or source of income. The supply of Greek text-books slightly exceeds the demand, and the sale of books making real contributions to science does not encourage author or publishers to over-indulgence in their production. As "G. H. M." points out, the only alternative for the young man entering college work is celibacy or debt.

This is something altogether different from a "vow of poverty." The college teacher need never pray, "Give me neither poverty nor riches," for he can never escape the one nor attain the other, save by the European method of marrying a rich wife. Between the wear and tear and distraction of the fruitless struggle to make the ends meet, and the loss of time and scholarship in the few cases of money-making among college teachers, there is no comparison. The loss to American colleges and American learning by the former is incalculably greater than by the latter. No pension fund promising future support can relieve present distress. The problem is how to pay the grocer *now*, not how to be kept from starving in old age; how to be able to earn money enough to support one's wife and educate one's children, not whether one will outlive the other fellows and get a pension. That one of the keenest, most successful business men of the day so realizes the hopelessness of the college teacher's old age as to make some provision for it, indicates his conviction that something must be done at once to relieve those who cannot now be helped in any other way. For a man approaching old age after years of inadequate pay, a pension is the only salvation. For younger men in the college career, Mr. Carnegie's pension system is not the only salvation, nor the one which the self-respecting and independent man would choose. If Mr. Carnegie had directed his generous gift and the weight of his influence against a scale of salaries which forces the college officer to celibacy or to want, there could be greater satisfaction in the feeling of gratitude and appreciation merited by such a gift. Let the salaries of college men be what they should, with fewer college men if need be, and there would be no occasion to fear an indigent old age.

Very truly yours, G. J. P.

May 8, 1905.

THE ART MERGER IN NEW YORK.

TO THE EDITOR OF THE NATION:

SIR: Noting, in your last issue, the appointment as professors of architecture in Columbia University of Mr. C. F. McKim and Mr. Thomas Hastings, both *in propriâ personâ* well beyond the suspicion of acquiring their practice by dominant low-class political and commercial rather than by artistic and professional regimen—which is more than can be said of some other prominent architects—you then advert, approvingly of course, to the proposed alliance of Columbia with the National Academy of Design. President Butler includes with these the Metropolitan Museum of Art in his scheme for such coöperation as will lead to the establishment of an adequate School of Fine Arts—for all of them, as I understand—and the New York papers generally have discussed the subject appreciatively and with considerable point.

Such a project commends itself to probably a majority of the practitioners and lovers of any of the fine arts—plastic, graphic, tonal, or other; but the movement, to be successful, will have to be managed very carefully. "United we stand, divided we fall," is an old maxim; and every one familiar with the vicissitudes and frequent failures of well-meaning and enthusiastic, but not always far-seeing, art associations in this country during, say, the last two decades, knows how often they have fallen for want of standing together, shoulder to shoulder, in a not invariably appreciative and responsive community; some, indeed, having staying power enough to rise again for another wrestle with untoward circumstance, but more, perhaps, staying prone in final collapse.

Confronting, however, this it may be hoped for majority of well-wishers to an amalgamative art project, it should be remembered that in all bodies banded together for the attainment of a special end there are very sure to be some who are so constituted that their motto is "Stare super vias antiquas, et non quieta movere." They represent the conservative element, which is as necessary for the equilibrium and continuity of any large fraternity as is the reformatory element for its expansion and maximum usefulness. Moreover, it is in this class, rather than in that of the aggressively active, that one is apt to find the majority of those who have longest held the laboring oar in their society, and are the most familiar with its history and current workings. No matter, therefore, how pure and public-spirited may be those ur-

gent for a change of methods and for strength-gaining coöperation with cognate bodies, this conservative element not unnaturally regards them with suspicion, and resents alike the merging of their specific association with any others, and the assumed absorption by those others of the treasures the accumulation and custody of which have been their hobby. They are apt to ascribe only motives of self-aggrandizement to them, and to assign them the rôle of the proverbial bull in the china shop; and naturally their ire is specially aroused if a preconcerted programme for a merger in which they have had no hand is suddenly submitted to them. For the success of a new movement such worthy and faithful standard-bearers must be fairly, squarely, and openly reckoned with from the start, no matter how good the ground and how disinterested the motives of the party intent on beneficent change.

I venture to offer these suggestions to the distinguished promoters of the comprehensive art and educational scheme now under public discussion, because, through the lack, I judge, of such reckoning *ab initio*, I have witnessed repeated failures in similar, if less important, projects—the last time within a few months when, acting as a member of a joint committee of the Historical Society of New York and the Numismatic and Archæological Society on the question of a merger of the two bodies in (as I am individually convinced) the ultimate true interest of both. Not a few laudable and really feasible projects, as much to the real advantage of the opposing factions as to that, both current and final, of the public, have, as every student of history, and not least of art history, knows, been long delayed, even if they have not received their *coup de grâce*, through those rampant faults of human nature, too strong an appreciation of one's own sagacity and rectitude, with too low an estimate of the like in others, and the conviction that there is no right way of thought or action save one's own way.

I have written at so much greater length than I contemplated on a subject deeply interesting to me, as doubtless to so many others, that I must, at least for the nonce, forego what I intended to submit further to your indulgence on several other heads when I cut the leaves of your weekly of last Thursday. A. J. Bloor.

Stonington, Conn., May 7, 1905.

A GRIEVANCE.

To the Editor of The Nation:

Sir: The schoolbook publishing business is very largely an industry of the last sixty years. Before that time comparatively few books were published, and those few were inferior in subject-matter and in mechanical construction. Sixty years ago it was not an easy matter for an author to obtain a publisher for his book. The demand was so limited that very little capital was attracted to that line of business. The children used at school whatever happened to be placed in their hands. It was not at all unusual to find several kinds of texts on one subject in the same school; and in the majority of schools the reader, arithmetic, and spelling-book were the principal texts in use. In those days the teaching fraternity were not kept informed even of the little that was being done in the schoolbook world. The practice of sending out copies for examination was almost, if not wholly, unknown. If a teacher wanted to see a new book, he had to send away and buy it.

To-day the publishing of schoolbooks is conducted on very different lines. There is sharp competition among the various houses in securing good books. Great care is exercised and no expense spared in making them as perfect as possible. Generous royalties are offered in order that the highest talent may be secured. Publishers are not content to bring out a book just as it comes from the author's hand. The manuscript is passed upon by competent critics, and, if it is found wanting, either in subject-matter, form, or adaptability to the needs of the classroom, it is carefully revised. Large sums of money are often expended in perfecting a manuscript. Money is also spent freely in illustrating and manufacturing the schoolbook of to-day.

As soon as a book is published, it is sent out liberally to teachers and school officials and followed up by intelligent agents—usually college men. This, it will readily be seen, is a heavy expense. Indeed, the cost of putting a book upon the market is so great that there is no certainty of any profit accruing either to author or publisher until it has proved its wearing qualities in the schoolroom. It takes four or five years for a book that is used extensively to pay back the original investment; and unless it holds the market for another five years the profit on it is small.

Competition has been so sharp that publishers have vied with each other in sending out their books very liberally for examination. So long as they did not get back into the market, the publishers were justified, in a measure, in their liberality, for this method brings to the attention of teachers and school officials the latest and best educational thought as nothing else can. But a serious menace has arisen to this custom. Several firms have recently been established whose practice it is to correspond with and visit teachers and school officials for the purpose of buying from them the books which have been sent for examination. So freely have these examination copies been distributed that thousands of teachers have found themselves burdened with books which they could not use in their work, and which were consequently of little or no value to them. Moreover, this liberality on the part of the publishers has naturally given the impression to the teaching fraternity that the cost of these books is trifling; and they have thoughtlessly sold them into the market without realizing the injustice they were doing to both author and publisher. So successful have these firms been in their canvass that it often happens that, when an agent has secured a good adoption, the publisher does not sell a single copy of the book introduced. The order goes to the dealer, who is able to sell the books at a large discount and yet make a larger margin of profit than the publisher would expect to secure. Now, these books were given away as complimentary copies for examination in the first place, and so the author received no copyright. In the final sale they are handled by these dealers, who of course pay the author no royalty. Consequently the author is robbed of the reward of his labor and skill, and the publisher is deprived of his legitimate sales. It will thus be seen that the very liberality of the publisher has become one of his heaviest burdens.

Unless something can be done to discourage the practice of selling these examination copies, which has now assumed such large proportions, publishers cannot continue their present custom of sending out books so freely. Either the recipients must refuse to dispose of them or publishers must limit their number. From an intimate knowledge of teachers and school officials, extending over a period of more than forty years, it is my belief that, when this matter is once called to their attention, few, if any, in the entire length and breadth of this land, will, for the small profit accruing to them, do such grave injustice to author and publisher as this practice has been shown to be. Edwin Ginn.

Boston, May 11, 1905.

CLASSICAL ASSOCIATION OF THE MIDDLE WEST.

To the Editor of The Nation:

Sir: The meeting of the Classical Association of the Middle West and South, of which notice was given in your issue of April 4, took place in Mandel Hall, at the University of Chicago, upon the 5th and 6th inst. The proportion of members present was large, the registered attendance being 167. Professor Pais of the University of Naples (now lecturing at the University of Wisconsin) was kept away by temporary illness. Otherwise the papers were given as announced, namely: "Herodotus and the Oracle of Delphi," by Prof. Arthur Fairbanks of the University of Iowa; "The Subjunctive in Consecutive Clauses," by Prof. J. J. Schlicher of the Indiana State Normal School, Terre Haute; "The General Linguistic Conditions of Greece and Italy," by Prof. C. D. Buck of the University of Chicago; "The Present Imperative and the Aorist Subjunctive in Prohibition in Greek Dramatic Poetry," by Prof. J. A. Scott of Northwestern University; "Syllabification in Latin Inscriptions," by Prof. Walter Dennison of the University of Michigan, with a "Supplementary Note on Syllabification in Latin Manuscripts," by Prof. W. G. Hale of the University of Chicago; "Latin Composition in Secondary Schools," by Prof. B. L. D'Ooge of the State Normal College, Ypsilanti, Mich; "An Experiment in the Teaching of First and Second Year Latin," by Professor Hale; "The Present Status of the Leukas-Ithaka Question," by Prof. W. G. Manly of the University of Missouri; "Virgil's Epic Technique," by Prof. Gordon J. Laing of the University of Chicago; "Pompeii and St. Pierre," with lantern illustrations, by Prof. F. W. Kelsey of the University of Michigan.

On the evening of the first day, an address was delivered by Professor Shorey of the University of Chicago, upon "Philology and Classical Philology." The presiding officer was Prof. A. F. West of Princeton, who fortunately happened to be passing through Chicago at the time. At the conclusion of the address, a reception was given to the Association by the University of Chicago, in Hutchinson Hall. After the reception, a very successful "smoker," with informal addresses, was

held at the Quadrangle Club, with Professor West in the chair.

At the meeting of organization, held on the second morning, Prof. W. G. Manly of the University of Missouri, with whom the movement originated, was elected president for the coming year. Twenty-two vice-presidents were appointed, one from each of the States included in the territory of the Association. Of these officers, Prof. A. T. Walker of the University of Kansas was elected first vice-president. Professor D'Ooge was elected secretary and treasurer. An executive committee of five was also appointed.

The most important business before the organization was naturally the question whether it should offer itself as a branch-member to the American Philological Association, or should have a separate existence and a separate organ of publication. Before the meeting, there had been doubts on the part of a number of persons; but the strength of the movement was so apparent that, from the opening of the first session, so far as the writer is aware, opinion was unanimous that the organization must have an independent existence and an independent means of publication. It was also felt by every one that a single yearly volume containing the papers given at the meetings would not suffice, but that there must be a publication, appearing frequently and at regular intervals, which should afford a means for the active interchange of opinion. A resolution was therefore passed, without a dissenting voice, that the Association should publish a journal, to be issued in eight numbers of not less than twenty-four pages each, and to contain articles, reviews, notes, communications, and editorials, of a kind adapted to appeal to the teacher as such, in school or college. The offer of the University to guarantee this journal financially for a period of five years was accepted. The first number is expected to appear in January next. W. G. HALE.

CHICAGO, May 15, 1905.

Notes.

The volume of Dr. Sandys's 'Harvard Lectures on the Revival of Learning,' to be published by Macmillan Co., will embrace "Petrarch and Boccaccio," "The Age of Discoveries," "The Academies of Florence, Venice, Naples, and Rome," "The History of Ciceronianism," and two other chapters, plus a seventh on "The Study of Greek," with a sketch of the European diffusion of the new learning. The same firm announces 'The Foundations of Sociology,' by Prof. Edward A. Ross of the University of Nebraska.

A new volume of verse, 'From the Book of Valentines,' and another of prose essays, 'The Poetry of Life,' by Bliss Carman, are in the press of L. C. Page & Co., Boston.

The sum of $300 will procure to subscribers a ten-volume collection of 'Portraits Russes des XVIIIe et XIXe Siècles' (Leipzig: Karl W. Hiersemann; New York: Lemcke & Buechner). The text, in each case "a short biography, based upon careful historical researches," will apparently be supplied by the editor, the Grand Duke Nicolas Mikhailovitch, who draws upon his own private collection as well as from other sources—in oil, water-color and gouache. The size is quarto. The publication will be in parts (volume one is already out), and will cover six years. The more than 2,000 portraits will be reproduced in phototype, and well reproduced, to judge from the specimen plates.

The publication, in twelve volumes octavo, of the Proceedings (*Atti*) of the International Congress of Historical Sciences, held at Rome in April, 1903, will soon be completed. The eminence of many of the contributors is so evident that our principal American libraries will presumably wish to procure complete sets of the work. Two volumes are devoted to history, and one each to the history of literatures, archæology, numismatics, fine arts, music and drama, jurisprudence, geography, philosophy and religions, and physical, mathematical, natural and medical sciences. An introductory volume will describe the Congress. The work is issued under the direction of the Italian Government, and may be subscribed for through the Libreria Loescher, 307 Corso Umberto I., Rome.

There lies before us a circular letter from the Committee for the Establishment of an American Section in the Municipal Library of Frankfort. "Being convinced that the dissemination of a more perfect knowledge concerning the political, social, economic, and intellectual life of the United States of America is urgently desired in Germany, and also that no German city is better fitted as a centre for such purpose than Frankfort-on-the-Main, situated as it is in the heart of Germany, a committee has been formed to accomplish this end." The proposed American Section of the Frankfort Library will be devoted more especially "to the philosophical, historical, judicial, political, industrial, commercial, and sociological literature of the United States." The activity of the committee will be directed towards two ends—first, towards the collection of a fund for the purchase of American literature, and, second, towards securing for the Library as gifts the publications of American governments, Federal, State, and municipal, educational and scientific institutions and associations, chambers of commerce, etc. The circular, which is signed by the chairman of the committee, Dr. Adickes, Mayor of Frankfort, points out that the Frankfort Library is open to every one, free of charge, and that its large reading-room is always accessible to the public. Mr. James Speyer of Speyer & Co., New York, represents the committee in this country.

Dr. Keltie, editor of the 'Statesman's Yearbook,' is able to make a brave showing of revision for the current forty-second annual issue (Macmillan). The Australian Commonwealth begins to take a statistical place in the matter of commerce; various articles furnish fresh information on the European Eastern question, about the French colonial development, the Philippines, etc. Among the introductory tables is one of "important losses" in the first year of the Russo-Japanese war—meaning in ships only. Japanese reticence leaves several items debatable. The preliminary maps, grouped together, have, among the most interesting subjects, the army divisions of the United Kingdom; railroad schemes in the Near East, particularly the great lines projected to connect the Black and Caspian Seas with the Persian Gulf; world areas of cotton-growing, and of wheat and meat supply for Great Britain—that of wheat being much the least in British possessions; and some boundary adjustments in South America, by treaty or arbitration, viz., between Brazil and British Guiana on the one hand and Bolivia on the other. From map and text together, we judge that the King of Italy's decision debarred Brazil from the Essequibo watershed for which she contended.

Anthologies of descriptions of places are not always satisfactory, because they are likely to be too scrappy or too unequal in style. But Miss Esther Singleton has, in 'Venice as Seen and Described by Famous Writers' (Dodd, Mead & Co.), made a book that is charming to read anywhere, and will be useful for travellers in Venice to consult. She has chosen nearly fifty pieces, written by authors from Dickens to Mr. Horatio Brown, and of such length that they do not lose their literary quality. By a logical arrangement, she has made these selections give in turn the general history of Venice, and describe its monuments, works of art, and environs. You visit the Rialto with Yriarte, the tombs of the Doges with Taine, the Grand Canal with Gautier, St. Mark's—and many other spots—with Ruskin. John Richard Green outlines for you the historic contrasts between Rome and Venice, or the place of Tintoretto among painters; J. A. Symonds describes Venice by night; Molmenti takes you to the patricians' palaces; Havard is your guide on the Campanile—alas! now fallen. Clear half-tone views really illustrate this excellent compilation, in which alone are lacking citations from Mr. Howells, Mr. Norton, and some few other Americans, in order to be complete. The exigencies of copyright may have caused their exclusion.

The reflections of Mr. Charles H. Harvey in 'The Biology of British Politics' (London: Swan Sonnenschein; New York: Scribners) do not go far to remedy what he alleges to be the great defect of politics—*i. e.*, that it is still only an empirical art. The Darwinian theory was scarcely necessary to teach us that the success of a nation, as of an individual, largely depends on adaptation to environment, and Mr. Harvey's application of this doctrine to the present needs of the British Empire will appear to many readers a discovery of the obvious. Even an evolutionary philosopher, however, may light sometimes upon a mare's-nest, as when this writer finds that, owing to the increasing importance of the Pacific, "the long coast lines of the British Empire there will require, more than ever before, the absolute supremacy of the British navy." While it comes short of its professed aim, the book is of service to the student of politics, as giving a clear and convenient outline of the changes in international relations during the last century.

When the second edition of Sir George Trevelyan's 'History of the American Revolution' was noticed in these columns, we were not in a position to collate the original Part I. with the new Volume I. so as to pronounce on the revisions as mentioned by the author. This we have now done, and do not hesitate to say they have been performed in a truly careful and judicious manner. The sections have been broken up; the first chapter, which had been obviously written in continuation of the au-

thor's 'Life of Fox,' has had its contents transferred to more appropriate parts of the text, to an appendix, or to the notes. These two receptacles contain matter from other chapters of Part I., and have been enriched, as has the text, by many valuable illustrations, both lively and grave. A passage about George Selwyn appears to have been wisely sacrificed, while excellent pages on Burke and on Fox himself are new. The reference in the appendix to Franklin's use of the coat in which he stood Wedderburn's attack, is specially valuable; and many slighter touches, to which the author modestly asks attention, well deserve it. As our recent notice called attention to some uncorrected errors, it is only fair to say that many others in Part I. have been expelled.

The Geographical Society of Baltimore has set a notable example in the publication (through Macmillan) of a handsome quarto volume on 'The Bahama Islands,' edited by Dr. George Burbank Shattuck, head of the Society's expedition to the archipelago—dispatched on June 1, 1903. The materials here elaborated were necessarily gathered in the brief space of five weeks, dependence being placed upon a sailing vessel. The work was well distributed among specialists adequately equipped with apparatus, and the result is a monograph of high and varied interest and general readability. The illustrations are numerous and admirable, often colored, and there is an abundance of maps and diagrams. The range is exhaustive, from the physiography of the islands to their history, "with a special study of the abolition of slavery in the colony"; from climate and magnetic observations and kite-exploration of the mosquitoes (a chapter quite novel to science); from fossils to tides and benchmarks, etc., etc. Some of the most beautiful plates are of floral vegetation and of gaudy fish. This survey will suffice to show the value of the report, which space forbids us to undertake to review. We will cite the remark that none of the fifteen species of mosquitoes collected were distinctively Bahamian. "All have a North American distribution," some a tropical. Dr. Howard is engaged upon a North and Central American and West Indian mosquito monograph under a grant from the Carnegie Institution.

In modern legal education, selections of cases play a leading part, and their name is legion. One of the latest which have reached us is Mr. Courtney Stanhope Kenny's 'Selection of Cases Illustrative of the English Law of Tort' (Cambridge [Eng.] University Press; New York: Macmillan). The author has lectured on this subject at Cambridge for ten years past, and is at home in his subject. His illustrations consist of only some two hundred cases on the law of tort, but by means of them Mr. Kenny manages to cover the whole ground, first giving the general principles (Liability—Liability as Affected by Status—General Exceptions to Liability—Remedies), and following this with the usual analysis of the various kinds of torts (Assault, False Imprisonment, etc.). The headnotes take the form of a running and concise exposition of the law. This method works better with some cases than with others. Thus, "An act otherwise lawful is usually *not* rendered a tort by its causing damage" (Holmes *v.* Mather, p. 1) is a concise and clear statement; the same can hardly be said of the headnote prefixed to the well-known *Mogul* steamship case (p. 195). As a compendium the book is excellent.

Harrison Weir's 'Poultry Book,' which Doubleday, Page & Co. have been issuing in parts, is now gathered into three superb volumes, constituting the most impressive and important contribution to the subject of domestic fowl ever undertaken. The illustrations in color and in black and white, by Harrison Weir and others, reach a level of excellence that will remain the standard of comparison until some vastly superior process of pictorial reproduction is discovered. The topics treated cover every contingency and safeguard in the selection and breeding of domestic fowl, including pigeons. The work contains also a chapter on the rearing of pheasants, an industry destined before long to be of great importance; the propagation of this species for private preserves being yearly on the increase. The general use of the incubator has opened fresh possibilities to the amateur or professional breeder of domestic fowl. Even ostriches are now hatched in these machines. Pigeon eggs are exempt only for the reason that the young of that bird are fed upon predigested food supplied by the parent. The superiority of artificial over natural incubation is now no longer contested. The incubator, therefore, has become such a weighty factor in the poultry industry that 'The Poultry Book' has given the subject the attention it deserves. It is impossible to discriminate in the great mass of valuable information contained in these volumes, or to indicate where the treatment of one subject surpasses another in completeness. No detail, however minute, is omitted; even the general reader will find much in it to interest him.

In his Providence *Book Notes* for May, Mr. Rider carries back sixty years the first appearance in print of the word *gavel* in the sense of hammer, which is peculiar to the United States. Dr. Murray had to put up, for a definite quotation, with the *Nation* of 1866, though Worcester had caught the word. Mr. Rider has discovered it in a Masonic work, the 'Freemason's Monitor,' Providence, 1805 (p. 36): "The common gavel is an instrument made use of by operative masons to break off corners of rough stones," etc. The author, Thomas Smith Webb, proceeds to symbolize the tool for "free and accepted Masons." Its earliest assignment to a presiding officer must still be sought.

As one would not naturally look for etymologies in an appendix to the Report of the Commissioner of Fisheries for 1904, we will notice that the derivation of *alewife* is there discussed by Dr. Theodore Gill, in a sketch of the State Ichthyology of Massachusetts. In no carping spirit Dr. Gill takes up the derivations which Dr. Murray recorded without being satisfied with them, and summarizes his own contribution to the same subject in *Notes and Queries*. Instead of being American, he states that *alewife* is an old English name that still survives in southwestern England; it has for centuries been current with *alose, allowes, allow, oldwife*, etc.; but as to just how it was evolved, "further investigation is required," as Dr. Murray said.

Museumskunde is the name of a new quarterly journal (Berlin: G. Reimer) devoted, as its name shows, to the interests of museums and museum workers. The initial article in the first number is a description of the Kaiser Friedrich Museum in Berlin, by its director, W. Bode. The Museum has recently been installed in a new building, and this gives Dr. Bode an occasion to remark on the fact that many large museum buildings, such as the Louvre, the National Gallery, the Old Pinakothek, have served as models for others, and to warn against attempts so to use the present building. The peculiar shape of the ground where it is built, and the particular character of many of its collections, presented problems which had to be solved in a somewhat unique way. The author aims to make clear these conditions. In another article, entitled "Das Nächstliegende," Dr. A. Lichtwark of Hamburg makes a plea for historical museums of local art. Mr. F. A. Bather, in discoursing on Museum Reports, asks why they are so dull? Mr. Bather acknowledges, of course, that some reports do afford really instructve reading for the working curator; they come, he says, chiefly from America. The journal contains the usual department of book reviews and notices, and, in addition to this, a list of articles selected from general scientific, chemical, and technical journals which offer something of interest to museum administrators; particular attention will be given to methods of conserving and to the work of the museum chemist.

At Rossleben, on the Franco-German border, a new pedagogical experiment is being made that is attracting considerable attention. As the result of an agreement by the French and the Prussian Governments, a young university graduate from France has taken a position in the German gymnasium at Rossleben, for the purpose of giving, without cost, practical instruction in his native language. In the same way a German philologian goes to a French secondary school designated by the French Government for the purpose of giving practical instruction in German. M. Maillet, Licencié of the Paris Sorbonne, is already at work in Rossleben. It is hoped to extend this international exchange of languages and courtesy.

The Milan Exposition of 1906 is to improve on that at Turin in 1898 in one particular: it will attempt a still more impressive showing of the activity of three million Italians abroad. A retrospective survey of Italian greatness outside the peninsula, in every age and country, will also be furnished. The propaganda of the Dante Alighieri Society in and out of the kingdom will be conspicuously represented.

The first modern performance of Greene's romantic comedy, "The Honourable Historie of Frier Bacon and Frier Bungay," was given at Champaign, on May 8, under the auspices of the English Club of the University of Illinois. At the same time appeared an acting version of the play, prepared by T. H. Guild and F. W. Scott of the department of Rhetoric and English respectively. In this version, which is based upon the text of the play in Gayley's 'Representative English Comedies,' the sixteen scenes of the original are divided into the conventional five acts, with two or three scenes in each act. The omissions, amounting to about a third of the whole, were dictated by considerations of modern taste, verbal clearness, and dramatic effect. Throughout, the editors have aimed at producing a version that would afford amusement to a modern audience without doing violence to

the spirit of the original, and the evident pleasure with which the performance was followed was sufficient justification of the methods. The success of the magic scenes, which did not appear at all childish as one literary critic has characterized them, was pronounced; and, throughout, the figure of Bacon held the interest and sympathy of the spectators. It seems probable, after this highly successful first attempt, that Greene's charming play will be given a place among the pieces occasionally produced by amateurs, even though it may never be recognized on the professional stage.

—In the April-May number of the *Zentralblatt für Bibliothekswesen* are printed the regulations of the Bureau of information for the Libraries of Germany which was established recently as a kind of appendix to the Prussian *Gesammtkatalog*. While that catalogue represents only twelve of the largest libraries of the kingdom of Prussia, the Royal Library in Berlin and the eleven university libraries, the Bureau is the agent of not less than seventy-four libraries in all parts of the German Empire, and it is expected that many more will join in the near future. The purpose of the Bureau is to foster intercourse between libraries and students, more particularly to give an inquirer information as to where he might find a given book. The information is obtained either by ascertaining through the 'Gesammtkatalog' whether the book is to be found in any of the libraries represented by it, or, if not, by inquiring at that one of the other participating libraries in which it seems most reasonable to expect to find the book in question. Of the books whose whereabouts still remain to be ascertained, lists will be printed from time to time and sent to the various libraries. A charge is made of ten pfennigs for each title. This number of the periodical contains also the new statutes for the Royal Library. They contain many regulations which must seem antiquated to American librarians, especially the one that requires a request for a book to be sent in two hours in advance, and that full title and other particulars be given even when the call number of the book is known.

—Mr. Berenson's 'Lorenzo Lotto' (London: Bell; New York: Macmillan) appears the third time from the press, about ten years from the date of original issue. Meanwhile the main contention of the book, the reconstruction of the school of Alwise Vivarini, has been generally accepted, and the volume itself has gained through the discovery of new works and the swelling of the illustrations from thirty to sixty-four. As in a former review, we doubt the application of the Morellian methods to portraits; and, so far as one may judge by reproductions, several of the portrait drawings and paintings attributed to the pervasive Alwise seem to us merely nondescript. The work, however, remains a model of systematic investigation in a field in which mere impressionism has often confused counsel, and we record with some regret a rather curious instance in which Mr. Berenson slips into the kind of offhand error his example has done so much to rebuke. Every lover of Lotto will remember the portrait, in Vienna, of a man in three aspects. Mr. Berenson admitted it tardily into the canon, characterizing it as an "interpretation of a commonplace, prosperous person." When it is realized that Mr. Berenson's book proves abundantly that Lotto was neither prosperous nor commonplace, and that Mr. J. Kerr-Lawson, in the *Burlington Magazine* for March, has shown most ingeniously that the picture contains a rebus— a lotto box—which marks it as Lotto's portrait of himself, a sign-post of humility is set up for all critics. As a matter of fact, the portrait shows a man of the burly, yet sensitive, type of the late William Morris, whom it strikingly recalls.

—If we examine the 'International French-English and English-French Dictionary' published by Hinds, Noble & Eldredge, in this city, we learn from the title-page that the French pronunciation has been in charge of Prof. Paul Passy of the University of Paris; the English, of Prof. George Hempl of the University of Michigan. The preface is signed by Robert Morris Pierce, and dated New York. Before reading this, we may ascertain for ourselves that the one-volume work has been compactly designed; that it neglects etymology altogether; that it eschews definitions in favor of synonyms; that it records irregular inflections; that it always spells the word out in full in illustrative phrases (a very laudable practice); that a list of French-English proper names is intercalated between the French and English sections. The page is in two broad columns, facilitating the assignment of a single line to a large proportion of the vocabulary. The full-face letter of the rubric contrasts well with the remainder of the text, which typographically leaves nothing to be desired. We could not of ourselves have found out that the conventional pronunciation marks are those of the International Phonetic Association, or that they will be employed in each of an ambitious series of dictionaries led off by the one before us. Nor might we have noticed the attention given "to certain functional variants concomitant with changes of meaning or stress," which the editor believes to be "an important innovation in lexicography." No example is offered of these variants. One case of fluctuating stress, in *survey* (the noun), is unnoticed here.

—The volume has an engaging appearance; the synonyms are crisp; the illustrations are fresh—"se tromper de tramway," to take the wrong car; "il me faut une jeune dactylographe," I must have a young typewriter. Still, there is nothing to make one discard his Gasc or his James and Molé, which are apt to be fuller, as one may discover under *faire* or *falloir*. Inaccuracies we have not observed, except that "esprit *du* corps" is set down (under *esprit*) concurrently with "esprit *de* corps," the true idiom. This phrase, we remark, appears under both its substantives, and so with "nom de guerre"; but this does not uniformly happen, *e. g.*, "lait de chaux" is entered only under *lait*. The correlation between the two sections is, as in all dictionaries, imperfect, and one must, for example, turn to *devil* for supplementary phrases of *diable*. Again, "esprit de corps," under *corps*, is periphrastically equated with "common spirit pervading an association of men"; under *esprit*, with "corps spirit, brotherhood." But in the English portion neither *brotherhood*, *corps*, nor *spirit* leads up to the French expression. So *pseudonym* has no reference to "nom de guerre," under which it occurs in the French portion. "Donner dans la vue" is "to strike the eye." Under *eye* we find *vue*, but not the phrase; nor under *strike*. We observe that the editor admits *morale* as the English equivalent of French *moral* (as of troops). Perhaps we might equally have expected "nom de plume" as our equivalent for "nom de guerre." Is it a scribe's error that gives, in the list of proper names, "*F*ernambouc" as well as "*P*ernambouc," for Pernambuco, under their respective initials?

—Vulcanologists and geologists generally will welcome the recently published report by M. Lacroix, chief of the French Scientific Commission to the Island of Martinique, of his observations on Pelée and the extraordinary phenomena which characterized the eruptions of 1902 and 1903. The stately volume, 'La Montagne Pelée et ses Éruptions' (Paris: Masson & Cie), published by the Academy of Sciences of Paris, covers practically the whole field of observation from the destruction of Saint-Pierre until near the close of the year 1904, and embodies the researches and conclusions of foreign investigators as well as those of the author and his associates. The unusual opportunities enjoyed by the French Commission, in its stay of over a year and a half on the island, for closely following the activities of the now famous volcano, particularly the phase of the making and unmaking of its great tower or obelisk, lend a special value to the report that has now been published, though the main facts contained in it have already been anticipated by the publications of the geologists of this country, as well as by Professor Lacroix himself in special reports addressed to the Académie des Sciences. As to the main facts connected with the eruption of May, 1902, and the destruction of Saint-Pierre, M. Lacroix is in accord with the views expressed by American observers generally, namely, that the annihilation of Saint-Pierre was brought about primarily as the result of an explosion of steam in the crateral part (Étang Sec) of the volcano, whose downward movement was initiated by a discharge taking place in that direction. The *nuée ardente*, as the destroying down-moving or down-rolling "black cloud" is called, was naturally charged with an extreme degree of heat; contained, in addition to the vapor of water, a number of gases in combination; and was in great part loaded with volcanic débris or ejecta. It was thus a veritable heat and gas tornado, whose impact few objects could withstand. Professor Lacroix believes that the velocity of this destroying blast could, at the time of its reaching Saint-Pierre, hardly have been less than 400-450 feet per second, and he is inclined to the belief that the destruction of the city of 25,000 inhabitants was brought about perhaps in hardly more than a fraction of a minute. In assuming that the destructive blast was directed downward as the result of explosive force, and that the death-dealing cloud did not reach Saint-Pierre in obedience to gravitational force, Lacroix confirms the views that have been advanced by the American observers as opposed to those of Drs. Flett and Tempest Anderson, representing the commission of the Royal Society of London. As regards the great monolith of rock which at the time of its greatest development rose up-

wards of a thousand feet above the summit of the dome (itself 1,600 feet high) reared over the ancient crater, Lacroix holds fundamentally to his original views of its construction, namely, that it was a great mass of highly viscous (acidic) lava that cooled and solidified during the very process of extrusion, and, as a result of this rapid solidification, was necessarily forced to take a vertical movement in place of the normal down-flow of lavas generally—a view that has been latterly contested by at least one geological observer. In addition to observations of a more general nature touching the phenomena of Pelée, Professor Lacroix's work contains a mass of important special studies, notably in petrography and the formation of quartzitic rocks. It is handsomely illustrated by a large number of heliographic plates.

—In Japan, the literature springing directly out of the war with Russia has been chiefly of a popular and ephemeral sort, although some of the poetry consists of more than the thirty-one syllable verselets. A few of the *nagai-uta*, or long poems, are well worth translating. Probably the most serious monograph is 'Senji Sobo Kigen,' or Words in Time of War—or, freely translated, Unpalatable Warnings in War Time, from a Poor Student Dwelling under a Thatched Roof. The author is Nishi Sawanosuke (Tokio: The Taiyosha, publishers), and his matter, in eight chapters, is infused with Shintoism at a high temperature, though his high appreciation of woman —so rare in Japanese literature—betrays the modern spirit of the new Japan. Unless we mistake, we are reading the message of the co-worker with Fukuzawa in the famous Mei Roku Sha (Society of the Sixth Year of Meiji [1874]), which has so powerfully affected the course of national education in Japan. In chapter i. he affirms the purpose of the war to be the protection of the Japanese and humanity, and the guarantee of international peace. This is to be sought in the development of industry, in international law, and in higher ethical teaching. The mission of Japan is to advance humanity in the world. Success is assured by the character of the people of Nippon, their morals and religion. Other religious and ethical systems are factitious and irrational. Japan has the morality of Heaven—real, natural, a perfect union of politics and religion in loyalty and filial piety. The punishment of perfidious Russia is Japan's duty. The Slav is the enemy of civilization in that he destroys the moral unity of the world. The story of Russia's seizure of Saghalien and of Tsushima is told vividly and in detail. Japan expects final and complete victory, but, to secure this, industry, finance, economics, must be carefully looked to. The author opposes all peace talk, for the work of the war, if not thoroughly consummated now, must be done over again in fresh blood. He then outlines peace terms which in substance mean the blotting out of Russia in the eastern half of Asia. He expects a long continuation of the war. If England in the Napoleonic era, with twelve million people, spent four billions of dollars to save Europe, why should not Japan persevere? In conclusion, he shows the defects of education in Japan as being too materialistic, and demands that the male teachers go to the front as soldiers and leave education to women, who are by nature the better instructors of youth. Summing up the work, we hear, through the blast of a Shinto trumpet, a tremendous indictment of the Education Department, with its corruption already made public and its pedagogic spirit so faulty in the Shintoistic view. In his high praise of woman and his close parallel drawn between the early Japanese and the primitive Hebrew spirit, we have proof that Shinto propagandists, like Christian men of polemic mind, read into old scriptures what impartial students of the archaic documents cannot find. The whole work in temper contrasts notably with Dr. Asakawa's work on the Russo-Japanese war, already reviewed in these columns; the latter's being the view most in accord with cool judgment.

COVENTRY PATMORE.

Coventry Patmore. By Edmund Gosse. (Literary Lives Series.) Charles Scribner's Sons.

Coventry Patmore was born in 1823 at Woodford in Essex. His father, Peter Patmore, himself a man of letters, had gained an unpleasant notoriety as second in a duel between John Scott, the editor, and Lockhart's friend Christie. These duels of literary men were generally bloodless—with Moore on two occasions they ended in a warm friendship, his opponent being unable to withstand the poet's fascinations at such short range; but the elder Patmore, in a moment of unaccountable bloodthirstiness, insisted that his principal should make no concessions, with the result that Scott was mortally wounded. Peter Patmore was dropped by his literary friends, and the blot on his father's name and the isolation of his family had a decided effect on the youth of the poet.

For his early life Mr. Gosse had to depend on the poet's reminiscences. Now Patmore's memory was of the imaginative type with which we are all familiar. "His memory amplified quantities before they could reach his lips in words," says Mr. Gosse. He was, in fact, subject to megalomania, which is no more lying than kleptomania is stealing. When a mature person of this disposition tells us that he was an agnostic until the age of eleven, and at nine was "Love's willing page," we know that his imagination has got the better of his memory. But Coventry Patmore must have been a strange, precocious, self-centred child, spoiled by his father, who from the first treated him as a budding genius, snubbed by his mother, a severe Scotchwoman, who resented this claim and to the last refused to look at her son's poems. This is how Peter Patmore describes his son at twenty:

> "See! his lithe, fragile form is bending over a book that is spread open on his knees, his head drooping towards it like a plucked flower. The pale face is resting on the clasped hand, over which, and all round the small, exquisitely modelled head, fall heavy waves of auburn hair, concealing all but one pale cheek—pale and cold as marble, but smooth and soft as a girl's."

On reading this, one is inclined to sympathize with Coventry's mother, and to forgive the more normal British parent's profound distrust of the artistic temperament.

Patmore was spared the university, and, after a desultory education and a residence in France, settled down in London to the literary life. His first volume of poems (1844) shows the influence of Tennyson in such a stanza as this from "Tamerton Church Tower":

> "Ere summer's prime that year the wasp
> Lay gorged within the peach;
> The tide, as though the sea did gasp,
> Fell lax upon the beach";

and there are clear imitations of the manner of Elizabeth Barrett, with whom Patmore had much in common. Mr. Gosse quotes from an unpublished letter of Browning: "A very interesting young poet has blushed into bloom this season." Patmore's welcome came chiefly from poets; the critics detected the influence of Keats and would have none of him. About this time his father withdrew to the Continent, and Coventry was told that he must for the first time support himself. Tennyson was his intimate friend, and they used to wander through London together, Patmore following the elder poet "like a dog" as he would say of himself with scorn in the later years of their estrangement. He was in a fair way to starve when Monckton Milnes secured him the post of assistant in the Library of the British Museum. When, in 1864, his second marriage with a woman of fortune enabled him to leave the Museum, he was, as an obituary note expressed it, "in a fair way to become Keeper of the Printed Books."

In 1847 he married a woman who was almost worshipped for her beauty in the circle of young pre-Raphaelites with whom her husband was intimate. Woolner made a medallion of Emily Patmore's head; Millais in 1851 painted her portrait; and finally Browning immortalized her beauty in a famous poem. It was admitted that when she laughed her charm was eclipsed, and the fact had not escaped Browning:

> "If one could have that little head of hers
> Painted upon a background of pale gold
> Such as the Tuscan's early art prefers,
> No shade encroaching on the matchless mould
> Of those two lips, which should be opening soft
> In the pure profile; not as when she laughs,
> For that spoils all . . ."

No wonder that when he had won this beautiful wife, Patmore himself determined to compose a poem in her honor, 'The Angel in the House.' Meanwhile he had contributed some poems to the pre-Raphaelite organ, the *Germ*, and had published a second volume called 'Tamerton Church-Tower' (1853). At this time Tennyson, the Brownings, and Matthew Arnold had produced or were producing their best work. Patmore had dreamed for years of a great poem consecrated to marriage before, in 1854, he published the first part of 'The Angel in the House.' It was like him to say at the start that he meant to make it "bigger than the 'Divina Commedia.'" Tennyson, in an unpublished letter to Aubrey de Vere, said that, "when finished, it will add one more to the small list of Great Poems." It is at any rate safe to say that few long English poems have been so eagerly read by the crowd. When in 1887 it was issued at threepence, a million copies were quickly sold, and it is still in great demand. It has never had any such vogue in this country, where the apotheosis of the home and of woman in her purely domestic aspect fails to secure the instant response that it meets from every Englishman,

Here is a real international difference. Put it down if you will to the unfailing British appetite for the sentimental, the appetite that was fed by Tennyson's 'May-Queen' and 'Dora' and a good deal of Wordsworth. At any rate the 'Angel in the House' could have been written only by an English poet; and, *mutatis mutandis*, such a poem would have a fair chance of a similar success to-day. The modern poet would not frankly tell the story, as Patmore does; he would compose a sonnet sequence, but the English ideal has not changed, and we doubt if it ever will.

The 'Angel in the House' is a narrative poem of middle-Victorian manners. The hero is just such a young man as Trollope delighted to describe, and his love story reads like a few chapters of Trollope put into verse. The setting of the courtship, the clothes of the young people, the food they ate, the trains they took, the parties they gave, the chairs they sat on—Patmore lets you have it all. His generation welcomed that sort of verse, and liked Patmore's lines on the furniture of the Deanery, the

> "Dim rich lustre of old oak
> And crimson velvet's glowing gloom,"

as it liked Tennyson's—

> "She left the novel half uncut
> Upon the rosewood shelf;
> She left the new piano shut,
> She could not please herself."

Or this, by another popular poet of the day:

> "Lady Anne Dewhurst on a crimson couch
> Lay, with a rug of sable o'er her knees,
> In a bright boudoir in Belgravia."

There were fewer novels in those days, and poetry must serve both its own purpose and the purposes of fiction. This sort of poetry has been labelled by Mr. Stedman, in his 'Victorian Anthology,' the "Composite Idyllic," and that is perhaps as near as one can get to a definition. It would be unfair to Patmore to dwell on the glaring faults of taste, the lack of humor, that mar his longest work. That there are in it touches of genuine poetry, moments in which the poet rises above the bourgeois comforts of the deanery, no reader of the poem can deny. Carlyle called one section of it, "The Espousals," a "beautiful little piece; high, ingenious, fine, managed with great art, *thrift*, and success," while Landor wrote: "Never was anything more tender." Yet the true admirer of Patmore bases his admiration on the later poems in the volume called 'The Unknown Eros,' published in 1877. The Eros whom he had celebrated in 'The Angel in the House' was certainly not "unknown." In the later volume the mysticism that was so strong an element in his temperament is given full play.

He had entered the Roman Catholic communion in 1864, after the death of his first wife, and remained for the rest of his long life in the closest sympathy with the doctrines of the Catholic Church. His second marriage, with a Catholic lady of considerable fortune, transformed him into a landed proprietor, and he proved by his admirable management of the estate in Sussex that a poet can be an excellent man of business. Patmore made his estate pay, and, a few years after its purchase, sold it at a profit—a rare achievement for an English landed proprietor. He spent his last years at Hastings, where he built a Catholic chapel, and at Lymington in Hampshire, where he died in 1896, in his seventy-fourth year. His portrait, painted by Sargent in 1894, is now in the National Portrait Gallery in London. Patmore sat to Sargent for the prophet Ezekiel in the decorations of the Boston Library and for a second portrait, so that there is no danger that his strange, inspired head and attenuated figure, with what Mr. Gosse calls "its aspect of a wild crane in the wilderness," will be forgotten. In the 'Oxford Book of English Verse' are three of the best of Patmore's short poems—"The Toys," "If I Were Dead," and "Departure." But if we wanted to convert the skeptic to the admission that Patmore is not to be judged by his apotheosis of "honorable domesticity," we should ask him to read first the ode "Azalea," which we quote in full:

> "There, where the sun shines first
> Against our room,
> She trained the gold Azalea, whose perfume
> She, Spring-like, from her breathing grace dispersed.
> Last night the delicate crests of saffron bloom,
> For that their dainty likeness watch'd and nursed,
> Were just at point to burst.
> At dawn I dream'd, O God, that she was dead,
> And groan'd aloud upon my wretched bed,
> And waked, ah, God! and did not waken her,
> But lay, with eyes still closed,
> Perfectly bless'd in the delicious sphere
> By which I knew so well that she was near,
> My heart to speechless thankfulness composed,
> Till 'gan to stir
> A dizzy somewhat in my troubled head—
> It *was* the azalea's breath, and she *was* dead!
> The warm night had the lingering buds disclosed,
> And I had fallen asleep with to my breast
> A chance-found letter press'd,
> In which she said,
> 'So, till to-morrow eve, my Own, adieu!
> Parting's well paid with 'soon again to meet,'
> Soon in your arms to feel so small and sweet,
> Sweet to myself that am so sweet to you."

Mr. Gosse was the intimate friend of Patmore, and, as intimate friends feel that duty demands, he has drawn the poet's portrait with an unflattering pen. But, while he does not spare the foibles and eccentricities of Patmore, he writes with a genuine appreciation of his much misunderstood genius; and though he says too little about Patmore's prose essays, which have singular merits of style, his attractive little volume, with its excellent illustrations, can be recommended to all to whom the more exhaustive Life by Mr. Champneys is not accessible.

LOW'S GOVERNANCE OF ENGLAND.

The Governance of England. By Sidney Low. G. P. Putnam's Sons. 1904.

To a student unfamiliar with the subject, this book must be altogether charming, and it may be read with pleasure by those to whom its contents are not novel. The author has a graceful and flexible style, an instrument polished by incessant use, and so deftly wielded as to convey the impression that such mastery of expository art must be supported by corresponding wisdom. No doubt, much of what he says has been said before; many of his statements are well-worn platitudes. But it is impossible, nowadays, to write of anything of consequence without saying what has been said before, and it is always possible to detect new shades of meaning in texts that have been expounded numberless times.

But Mr. Low attempts more than this. An account of the government of England, he says, must be like the picture of a living person:

> "If you want to see exactly how the original appears, you do not refer to a photograph taken twenty or thirty years ago. The features may be the same, but their expression, their proportion, and their whole character, have changed. In the interval between one examination of our public polity and another, the formal part may not have greatly altered, but the conventional, the organic, working, portion has been modified in all sorts of ways."

It may be said that since the subject has been handled by such writers as Hearn, Todd, Bagehot, and Dicey, so well equipped, so learned, and so able, there can be no necessity to deal with any part of it again; but those men wrote long ago—Mr. Low does not include in his list Mr. Courtney's recent 'Working Constitution'—and many things have happened in the interval. Their portraits were faithful when taken, but the subject has changed so much that it is time for him to sit again. Bagehot showed that the "literary" theory of the Constitution did not correspond with the facts of his day; but

> "Bagehot's ideas, sound and logical as they are in the main, as an explanation of the 'rough practice' which prevailed when Lord Palmerston was in office, have themselves crystallized into something like a 'literary theory.' . . . We cannot take the speculations and inferences of the critics belonging to the great middle-class era of English Constitutional history as if they were of pontifical authority for the present day."

The prospect thus opened before us is undeniably interesting. When Bagehot died, Mr. Birrell has declared, "he carried away into the next world more originality of thought than is now to be found in the Three Estates of the Realm." Nor was he more remarkable for penetration than for the persuasiveness with which he presented his views. Those who listened to him could not resist the conviction that he understood the nature of government because he understood human nature. He saw that rulers were but men of like passions with their subjects, and that governments were carried on as other affairs are carried on where action depends on the concurrence of a number of minds. He drew his conclusions from his experience; from his observation of the permanence and universality of certain traits in mankind from which their conduct may in general be predicted. It does not require genius to describe the superficial changes that take place in government; but whoever aspires to be Bagehot's successor, must possess rare powers of historical judgment, and profound knowledge of his fellow-creatures.

We do not think that Mr. Low is quite equal to the requirements of his undertaking, and shall point out as clearly as our space permits some of the respects in which his analysis appears to us deficient. The Cabinet system, he impressively assures us, might be deemed, did we not know it to exist, the nightmare of a satirist, the burlesque of an Aristophanes or a Rabelais. The reasons for this view are that the laws of the country are made by a "big, miscellaneous public meeting," that they are carried out by the nominees of the majority of this meeting, subject to the opposition of the minority, and in a manner offensive to a large minority of the people, and that these nominees agree in secret on the policy which they shall accept responsibility for

as a body. This sounds portentous enough; but when we recover our self-possession we begin to think that Mr. Low is himself the victim of the nightmare. For what he describes is nothing but the normal and necessary course of events when action is to be taken by a very large number of people. Unless they are ruled by an absolute despot, they must be ruled by a public meeting; and unless anarchy is to prevail in this meeting, the will of the majority must be decisive. Moreover, this majority must have leaders of its own choice—else they will not be leaders—and they must agree on their policy, or they will very soon have no followers. It may seem very astonishing that one human being should yield his will to that of another, but it is the essential condition of united action, whether it be of a baseball club or of the British Parliament, and it is as unavoidable as that if two men ride a horse, one must ride behind. It is not a nightmare, but a mare's nest, that Mr. Low has discovered.

That the Cabinet is a secret committee greatly astonishes Mr. Low. Why, herein is a wonderful thing, he exclaims, that the gravest concerns of a people should be decided under the cloak of an impenetrable darkness. The Cabinet ought to elect a chairman and a secretary, meet on fixed days, and keep minutes of its proceedings, and perhaps, we may add, admit reporters to its deliberations. Not in this way, we venture to observe, are the gravest concerns of a nation or of any great corporation decided. At the present moment, how much do the stockholders of the Union Pacific Railway and the New York Central know of the designs of the men that decide on their concerns? What trace of these designs, until they are ready for publication, appears in the minutes of the directors' meetings? How much of these designs have such of the directors as know anything of them learned at such meetings? According to a vulgar saying, we do not go duck hunting with a brass band; and the men who determine the business policy of the Steel Company, or the Oil Company, or the Sugar Company, form their plans without directors' meetings and their secretaries and minute-books. Who is so guileless as to suppose that the leaders of the Republican party do not secretly agree on the policy which shall be formally adopted by their followers in Congress? Who does not know that the Assemblymen at Albany and the Aldermen in New York adopt measures conceived with even more secrecy and informality than those of the British Cabinet? Military leaders do not explain their movements to the world before they carry them out, and it may be laid down as a universal law that, in the conduct of business affairs and of government, measures that will be resisted by opponents are not publicly announced until after they have been privately considered by those who will be held responsible for their execution.

It is a "curious fact," according to Mr. Low, that nearly one-half the legislators are not legislators at all. "They can neither make laws nor prevent laws being made." It would certainly be a curious fact, as it is a curious fancy, that the minority should rule the majority. But while it is true that members are elected as representatives of party, they are by no means so unchanging in their fealty as Mr. Low represents. Nothing is more impressive, in Mr. Morley's Life of Gladstone, than the proofs afforded of the unsubstantial nature of the foundation on which cabinets rest. Many measures were abandoned because certain members of the Cabinet would not support them; many were dropped because it was known that members of the majority would oppose them. Mr. Low would have us believe that the Cabinet has become very despotic—that it is only necessary for it to command and for the majority to obey. He actually asserts that the ministerialist member outside the Ministry itself "is not consulted, any more than the members of the Opposition, on bills which ministers propose to introduce; he sees them only when they come from the printers; and then he knows that, whether he likes them or not, he will be expected to support them by his vote in the lobbies." We can only reply with the counter assertion that a ministry which attempted to legislate without making sure of party support, which brought in bills offensive to the party and about which its members had not been consulted, would very soon come to grief. Mr. Gladstone's career is a long commentary on the necessity of constant touch between ministers and their followers. A ministry may sometimes insist on measures which are not liked by the party, but it will do so only for imperative reasons. The manner in which the great Conservative majority in the present Parliament has melted away, affords proof enough that Mr. Low's statements are too sweeping.

We might mention other particulars in which Mr. Low's attempts at originality do not appear successful, but in most of his book he prudently follows the beaten track. He can quote many eminent men as saying that things have altered for the worse in Parliament, and some who shake their heads and say that they do not know what the country is coming to. There is truth in such sayings, and they are always listened to with interest when they are supported by reason and experience. Mr. Low understands well how to use such material; and, as we have said, his book is extremely readable. The style, however, is rather more suitable for the columns of a journal or the pages of a magazine than for a serious treatise. There are many clever and some acute observations in the book; but, in our judgment, the view given of the English Constitution is superficial, and in some cases erroneous.

The Golden Age of Classic Christian Art. By Jean Paul Richter and A. Cameron Taylor. London: Duckworth & Co.

Under an ample title and in an ample volume of 427 pages, the authors of this work have presented to us the results of a most careful study of the mosaics of the nave and of the arch in the Church of S. Maria Maggiore in Rome. As we turn their interesting pages we may readily see why they decided upon a title which does not exactly indicate the contents of the volume. To them monumental Christian art is best represented by mosaics, which adorn a few great churches; and the most important example is the detailed series of Biblical pictures preserved in S. Maria Maggiore. Hence a study of those mosaics is a study of the golden age of Christian art. We are tempted to criticise the deduction and the title on the ground of logical exactness, but we are bound to say that, if we accept the conclusions reached by the authors, their contention is largely justified. The object of the book is declared to be "an attempt to appreciate a large and homogeneous group of classic pictures from the point of view of art, archæology, and theology, from each of which aspects they are of unique value."

This is a modest statement in view of what is actually accomplished, for Dr. Richter and Miss Taylor have further, as a result of most painstaking study and clear reasoning, apparently established theories as to the date and character of these mosaics not hitherto accepted. De Rossi, in his 'Mosaici di S. Maria Maggiore,' and Ainaloff, in his scholarly 'Mosaiken der vierten und fünften Jahrunderts,' have ascribed these pictures to the fifth century, relying upon the inscription at the summit of the arch, "Xystus Episcopus plebi dei," referring to Sixtus III. (432-440). These pictures have also been generally accepted as examples of continuous historical series, similar to the illustrations of the Vienna Genesis and the Joshua Roll. Such views, however, are not compatible with historical and stylistic considerations based on a detailed examination of the pictures. The chronological sequence of events is not found here; each scene does not represent an historical event; hence the purpose is didactic and not historical. If the art of this scene is didactic, and therefore intellectual, we must look for its literary parallel, and this is not found in the writings of St. Augustine or Jerome of the fourth or fifth centuries, but is rather reflected in the theological writings of the apologists of the second and third centuries. Stylistic peculiarities point the same way, for, if these mosaics are compared with monumental art, they are seen to belong to the period of the reliefs of the column of Marcus Aurelius and of the arch of Septimius Severus. They show the same well-proportioned figures, "firmly knit, classic in type," "complete in themselves both in action and interest, standing firmly and moving freely, not conceived frontally," as are the figures in the mosaics of S. Vitale and SS. Cosma and Damiano.

If the style and subject-matter of these pictures point to the second and third centuries as the date of their origin, what shall we say of the inscription of Xystus? It may be shown that Xystus's activity in the basilica was confined to the restoration and renaming of it, and possibly to a renewal of the preëxisting mosaics. Roof tiles and the masonry of the nave belong to the second century, and indicate a construction earlier than the time of Xystus. The subject-matter of the mosaics is drawn from apochryphal sources condemned before his time, and we cannot therefore attribute them to this Pope. In view of these facts, and from statements in the 'Gesta Liberii' and the 'Liber Pontificalis,' and in Christian writers of the fourth century, we may believe that the original building was the secular Basilica Sicinini which stood on the Esquiline. To this, Pope Liberius added an apse, thereby associating his name with the building, and, finally, Pope Xystus III. restored the structure and its interior, placing his inscription in the midst of the mosaics in such a way as to cut off the right foot of St.

Peter and the left foot of St. Paul. It would seem, then, that these mosaics belonged to the original basilica, which may have formed part of the palace of a wealthy convert who ornamented the building with decorations of a Christian character. As the figures in the lower pictures of the arch are crowded together, so as to accommodate the original in the gradually diminishing space, it is evident that they have been made after designs not originally intended for the space they occupy, but are copies of compositions of about the same date.

This, in brief, is the line of argument followed, and convincingly. The deductions are remarkable, for we must now modify our view as to the character of the Christian community of the Rome of the Antonines, and must also be willing to believe that such pictures survived the persecutions of Diocletian. It is helpful to know that modern historians, Zahn in 'Skizzen aus dem Leben der alten Kirche,' and Harnack in 'Die Mission und Ausbreitung des Christentums,' have been insisting that the popular conception as to the condition of the early Church should be greatly modified. On the side of art our author's theories are no less remarkable. If these compositions were neither conceived nor executed in a period of decadence, if they were untouched by Byzantinism, they must be in the direct succession from the classic pictorial art, and must form a most important link between early imperial art and that of the fourth and fifth centuries. "They reflect a noble phase of early Christian thought which has hitherto been believed to have passed away without having received definite art embodiment."

This book, then, has a place as a supplement to the epoch-making essay of Franz Wickhoff on the illuminated Genesis of the Imperial Library of Vienna, which has done so much to dignify Roman art. It serves also as a companion volume to the monumental work of Mons. J. Wilpert, 'Le Pitture delle Catacombe Romane.' The contents are arranged in two parts, the first of which is assigned to the prototypical decorations of the nave, the second to the antitypical decorations of the triumphal arch. There is a general introduction, and, at the close, appendices, containing summaries of the views of De Rossi and Ainaloff, and chronological tables. The style is most pleasing, not at all wearisome, and the treatment is calculated to awaken the interest of the reader as to the final deductions. A curious division of the text into sections denoted by Roman numerals is at times distracting, and is based apparently on no definite plan. The illustrations are in the main very satisfactory, particularly the colored plates reproducing the mosaics. Others are from the 'Storia dell' Arte Cristiana' (vol. v.) of Garucci, and from 'Le Pitture delle Catacombe Romane' of Wilpert. As many of these are placed side by side on the same page, there is much opportunity for comparative study. We can hardly appreciate the difficulties attendant upon a study of mosaics placed above the architrave and over the high altar of a church in which the ritual is daily celebrated. It was necessary to view them from temporary scaffolding or from a cage which was let down from the ceiling. Dr. Richter and Miss Taylor deserve the highest commendation for the thoroughness with which they have accomplished their task.

English Estate Forestry. By A. C. Forbes, F.H.A.S., Lecturer on Forestry at Durham College of Science, Newcastle-on-Tyne. London: Edward Arnold; New York: Longmans. 1904.

This is a timely publication. In these latter days, when attention is being seriously directed to the general subject of forestry, there is pressing need that the work of the forester should be examined in all its aspects. The present volume is devoted to a consideration of the training and duties of a forester on a private estate. To the American the last chapter, entitled "The English Forester," is the most important. In the compass of a few pages, Mr. Forbes states his views clearly as to the desirable education for a practical caretaker in an English forest, and, with very little change, the whole matter can be safely and usefully applied to private estates in the United States and Canada. It is not easy to condense into fewer lines the excellent advice which is given by Mr. Forbes on pages 324 and 325:

"The man intended to occupy a post on a large estate needs a more thorough and lengthened training than one who simply aims at filling the post of a working woodman or foreman on a small estate, or where the area of woodland is limited. In the former case the aspirant to a forestry appointment must not only have a fairly good general education, but should be more or less conversant with the elements of science and art. Botany, chemistry, geology, zoology, land surveying, and bookkeeping are all more or less important items in the education of such a man, although it is not necessary for him to be an expert in any one of them. But as regards sylviculture, or the planting, tending, and felling of woods and selling of timber, he should claim a considerable degree of expertness before he can consider himself a qualified forester.

"How can these qualifications be best acquired? We will suppose that the intending forester leaves school at the age of fifteen or sixteen, by which time he is fairly well up in most branches of general education. The first step he should then take must be of a practical nature. . . . The first step in his career, therefore, should be that of obtaining a footing on a large and well-wooded estate, if such can be found within reach of his paternal home. On such an estate, nursery-work, planting, cleaning of young plantations, the burning of rubbish, the tending of rides, roads, drains, and so on, are continually going on, and a strong healthy lad should be quite capable of taking his share in such work. He may, at this stage of his career, receive much benefit from a little theoretical coaching from the forester under whom he is employed, assuming that that individual is capable of giving it. By the time he is seventeen or eighteen he should become acquainted with the use of the axe, saw, handbill, and any other tools used in woods or woodwork. He should also get an insight into the measuring of timber, the setting out of drains, the principles of road construction, the theory of forming plantations, and the thinning of woods—all of which he can pick up with the aid of ordinary intelligence and observation.

"After undergoing a training of this kind until he is eighteen or nineteen years of age, he should be able to judge as to his fondness for the work or otherwise. If the work goes against the grain, he had better, to use a common expression, 'chuck it up' at once, for English forestry does not make capitalists, Trust directors, or any positions of that kind. But if his occupation is as much a source of pleasure as a provider of drudgery or hard work, he will, in all probability, find the life has other advantages than can be seen on the surface, or which are apparent to the outsider. The phases of the various seasons, the natural phenomena which are constantly cropping up before his eyes, and the observations on trees, plants, birds, insects, and all forms of life generally, will convert him into a naturalist, which will compensate him for the loss of many advantages he might derive from following other walks in life. If, then, he feels that the work satisfies all those ambitions he is likely to acquire in the course of life, he may take it for granted that English forestry is the right occupation for him.

"Now comes a period during which he ought to acquire touch with those sciences which have already been referred to. To do this, he cannot do better than attend one of those centres, in various parts of England, at which these sciences are taught with more or less thoroughness. The choice of such a centre should be guided by the facilities it also affords for attending a course of lectures on advanced forestry. At the present time there are at least two or three such centres in England or Scotland, and a six or twelve months' course at one of these will prove of inestimable advantage to him in after-life.

"The opportunities which such a course presents of visiting other parts of the country in which woods are numerous or well managed, should not be missed, and it may be of advantage if this can be associated with employment in a public nursery, where planting contracts are being undertaken, which affords facilities for travelling about. By working in a nursery he can get an insight into the practical side of raising and propagating trees and shrubs from seeds and cuttings. Such nurseries are also good training-grounds in the direction of forest botany, the extensive collection of trees and shrubs grown within their boundaries, and the necessity of naming or recognizing the various species in the course of their working, enabling one to recognize them at a glance—in their young stage, at any rate.

"By the time he is twenty-one he should be capable of taking a foreman's situation on a small estate, or working as an assistant forester on a large one."

We offer no apology for giving these long extracts, for we do not remember to have met such sound advice relative to practical forestry in such compact form.

In the United States there are to be a few desirable positions of great usefulness in connection with the forests on private estates and on the lands held by clubs. There are doubtless to be also a few excellent and responsible offices connected with the profitable exploiting of paper-pulp territory. For such places the hints given in Mr. Forbes's sound work will well serve, although they were designed for a totally different latitude and longitude. Training for the positions under the Government is well cared for in our forest schools as at present constituted, but we think that many of the students there may advantageously study the suggestions given in 'English Estate Forestry.'

Studies in Biblical Law. By Harold M. Wiener, of Lincoln's Inn, Barrister-at-law. London: David Nutt. 1904.

This is a small book—aside from preface and indexes, only 124 large octavo pages, much of it taken up with quotations from the Bible and from the higher critics, whom the writer combats; but it is bold and refreshing. After the Torah (Pentateuch) had for over two thousand years been venerated as the Law of Moses, when to deny the authorship of the Son of Amram was deemed treason and blasphemy by both Jew and Christian, De Wette, Kuenen, and Wellhausen arose to separate the Pentateuch into layers, labelled J. (Jehovist) and E. (Elohist) and D. (Deuteronomy) and H. (Holiness) and P. (Priestly Code), besides the Book of the Covenant (Ex. XXI.-

XXIII.), and besides the additions of the supposed redactor; and in the eyes of the "critical" world to contradict the Leyden School of Critics was deemed as impious as formerly it had been to deny the authorship of Moses. Now comes a young man, not a theologian, but a lawyer, and, to judge from his name, a Jew, who stands up for the greatest of lawgivers and for the highest glory of his own race, the Torah, and who throws down the gauntlet fearlessly to the higher critics. He deals with the Torah only as far as it teaches juridical law, rules of conduct between man and man, such as can be enforced by the judges; not with ceremonial law, nor with the narrative, miraculous or other. He shows that none of the higher critics have been lawyers, none of them trained in the art of weighing evidence, none of them acquainted, through their daily calling, with statutes such as they arbitrarily threw hither and thither, assigning them, as the whim struck them, to this or that period.

The writer dedicates his work to "Those who have lived and died for the Torah." He winds up by quoting from it (Deut. iv. 5-8) a passage which fills the heart of the faithful Israelite with joy and pride. Thus he does not approach his task with cold impartiality, but with the fervor of the champion. He is not ashamed to show his love and admiration for the heritage of Israel.

For his foil, the writer has chosen two late English works which best represent the conclusions of the higher criticism, the Hexateuch, arranged by the Society of Historical Theology, Oxford (Longmans, Green & Co., 1900), and Dr. Driver's Commentary on Deuteronomy; he goes back, however, to Robertson Smith wherever this scholar is relied on by the authors of these more recent works. The view of the higher critics is, broadly speaking, this: The Book of the Covenant was the oldest part of the Law of Israel; after it came a combination denoted by them as J. E.; after that, in the days of King Josiah, Deuteronomy was written; then followed the Book of Holiness, which contains, however, older material; next the rest of the Priestly Code, in which the 'Holiness' is imbedded as a part; and these successive systems of law flowed from the needs, feelings, and stages of culture of the times in which they grew up and were put forth. As an illustration of these diversities, the 'Hexateuch' takes up the rules for Hebrew bondmen and bondwomen in Ex. xxi., in Lev. xxv., and in Deut. xv., and points out that such contradictory systems could not have been set up within the forty years of the wanderings in the wilderness. Our writer shows that the first and the second of these chapters deal with men and women sold into servitude under different conditions, and he strengthens his position by showing the problems which arose in the early days of the Roman Republic from the enslavement of poor debtors. In like manner he takes up the apparent conflict between the passages in the several Mosaic books on the Sabbatic year (both as a year of fallow fields and of remission of debts) and between the passages dealing with involuntary manslaughter. In doing so, our writer goes over ground trodden nearly two thousand years ago by the sages of the Mishnah; but he strikes out his own line and stands forth much more logical than the old Pharisaic doctors; as well he might, not being, as they were, tied down by their traditions, or by what may be called the Jewish Common Law. In showing that the Mosaic law never intended the literal enforcement of the rule "an eye for eye, a tooth for tooth," he could hardly help using the same arguments, the same collocation of the several passages as to "ransom," which were used and brought forward by the sages of the Talmud, and which were undoubtedly borne out by an unbroken tradition. He argues that all the leading critics were simply learned in language, not in jurisprudence; and that, unlike the lawyer, they do not grasp the difference in facts and conditions to which the different laws must of necessity be applied.

The writer dwells on the Covenant (Hebrew *b'rith*), of which he sets forth two kinds, the "pillar covenant" (*i. e.*, one written on pillars, or denoted by pillars and mounds), and the "token covenant," marked by visible signs, which two covenants play a great part in the scriptural narrative; and he shows how the most important branches of law take the form of covenants or treaties between God and Israel. But it is not clear what bearing this form or sanction of the laws has on their date or on the unity of legislation in the lifetime of Moses. He is much more persuasive in deducing from the historic books and from the prophets the proof that the Law of Jubilee was in use under the old kingdom, and in showing the high improbability that post-exilic scribes could have invented for former centuries such a law, which their own contemporaries did not even attempt to renew—for, indeed, they could not have had any possible motive for inventing it. He maintains the antiquity of the law of inheritance given as an answer to "Zelophhad's Case" (Num. xxvii., 1-11), with its recognition of daughters as heirs in the absence of sons, against the pretence of the "critics" that this law must be of very late origin, because, from the Aryan standpoint, it seemed to them too humane for pre-exilic days; and here he is undoubtedly right, for Hammurabi's Code, much older than that of Moses, is even more liberal to the daughters as heiresses. He contests the claim of the critics that dowry coming from the bride's father could not co-exist with the Mohar, or bride's price, paid by the groom; for again Hammurabi's Code shows how both co-existed, and how the bridal price was at that date regularly returned to the husband, to be secured by him as a jointure for his wife in case of death or divorce.

Mr. Wiener's book might have been made much stronger if he had gone more into detail, and if he had drawn more fully on the parallels between Babylonian law, Torah and Jewish tradition. We are, of course, very far from taking sides with this author against the whole critical school; but the last word has not yet been spoken, and it is but proper that he and the side he represents should have a careful and patient hearing.

Thomas Hutchins: A Topographical Description of Virginia, Pennsylvania, Maryland and North Carolina. Reprinted from the original edition of 1778. Edited by Frederick Charles Hicks. Cleveland: The Burrows Brothers Co. 1904.

The publishers, whose reprints of neglected and well-nigh forgotten historical documents deserve not only praise but substantial recognition, have done well in reviving the memory and work of Hutchins, who, in his capacity of "Geographer of the United States," rendered important services to the young Republic. Born in New Jersey in 1730, Hutchins entered the British army at an early age, first in the colonial, and then in the regular service. He evidently had a natural talent for engineering, surveying, and map-making, and in 1766 was employed in explorations of the territory acquired by Great Britain from France at the Treaty of Paris. In pursuance of his duties he travelled much, and brought back the fruit of his work in valuable surveys and maps. In 1778 he published in London the Topographical Description reprinted in this volume, as an accompaniment to a remarkable map, here reproduced on a large scale. His account of the country, the topography, mineral and vegetable products, etc., shows minute observation. We miss any reference to mineral oil, though it had certainly attracted attention, for on his map we find "petroleum" about forty miles west of Pittsburgh.

While Hutchins was in London engaged on this work, the Revolution broke out, and as he did not disguise his sympathy with his countrymen, he suffered much persecution, was imprisoned under a charge of treason, and had to give up his commission at a heavy pecuniary loss. He sought refuge in France, where he was befriended by Franklin, who recommended him to Congress. He returned to America just about the time that Greene took command of the Southern Department, and was appointed Geographer to the Southern army, a title soon changed to that of Geographer to the United States of America. After the conclusion of peace, he was employed in several important surveys and investigations, and in 1784 published a description of Louisiana and West Florida, a work packed with information about a region then little known. He dwells upon the importance of controlling the mouth of the Mississippi, the only outlet to the vast and fertile Western Territories.

Considerations of space forbid the mention of other valuable services to his country, but there is one which cannot be omitted. In 1785 Congress passed an ordinance providing for surveying, mapping, and dividing the Western lands ceded by Virginia and other States, and placing the whole work under the control of Hutchins. That he suggested the plan of division into townships of six miles square, subdivided into lots of one square mile each, all systematically numbered by ranges, townships, and lots, there seems hardly to be a doubt; but it is clear that the wording of the ordinance was not his. Instead of laying off ranges by east-and-west lines, and dividing these by normal ordinates, the ordinance provided for laying them off by due north-and-south lines. Under this plan, owing to the convergence of meridians, no township could be square, and no two townships in a range could be of equal area, as he pointed out in a letter to the President of Congress. But, whatever its defects, this plan was the foundation of our present land system. Hutchins was engaged on this work, and had completed plats of four ranges, when his

health failed, and he died in Pittsburgh in 1789.

We regret that the edition is limited to 245 copies, as it is a book which should be in every public library.

California and its Missions: Their History to the Treaty of Guadalupe Hildalgo. By Bryan J. Clinch. 2 vols. San Francisco: The Whitaker & Ray Co. 1904.

This book, very creditable to both author and publishers, is well printed and not overloaded with illustrations. Those in the first volume are mostly taken from Venegas, and are therefore interesting from their quaintness. The author leans strongly towards the "old régime" (as Francis Parkman would have termed it) in California. It is pleasant reading to follow with him in the footsteps of the early missionaries, Jesuits as well as Franciscans, while he pictures their earnest labor and toil, and the modest fruits of their untiring devotion to their task. His appreciations of individual characters are usually just, and his biographic details correct. It is to be regretted that Mr. Clinch has not annotated his text and given references to his sources. An historical work of such magnitude demands the production of evidence in support of statements. Its unquestionable merits would be still further increased had the author paid more attention to his bibliography.

It is gratifying to note his attitude towards the superficial and often arrogant assertions concerning Spanish and Mexican California, its people, and their character, by visitors of Anglo-Saxon descent, from the later times of Mexican occupation. Whether his narrative of all the details of the American conquest of California is strictly uncolored or not may perhaps be open to doubt. Possibly his honest zeal for the reëstablishment of historic truth and the meting out of tardy justice has carried him a little too far towards the other extreme, and the "American conquest" of California was not quite as discreditable as he represents it. The "old régime" had not done justice to the enormous resources of California and could not do them justice, a change of masters was imperative, and, while some of the means employed to bring about the change will certainly not bear the light of impartial investigation without revealing features which Mr. Clinch justly censures, we must not conclude that every act was reprehensible because performed by the conquering party.

To the always attractive figures of the early missionaries the best pages of the two volumes are dedicated. Great and noble figures they will always remain, whether they are Jesuits like Kuehne (not Kuehn, as Mr. Clinch has it), Sedelmair (not Siedelmeyer, vol. i., p. 83—the Sedelmairs are a well-known Bavarian family), Salvatierra, or Franciscans like Father Garcés (who, in our opinion, deserved a more ample notice than the few references in chapters v. and viii. of volume ii.), Junipero Serra, and others. They command the respect and admiration even of those who may be bitterly opposed to the Catholic Church and its monastic institutions. Mr. Clinch's narrative of the early efforts to discover and colonize Lower California and to explore the coast to the north, is noteworthy, and contains much that is valuable. In these first chapters of the first volume are embodied his conceptions of Spain's government and administration of her American colonies and of her "Indian policy." The fairness with which he treats these subjects is worthy of sincere commendation. We cannot refrain from calling special attention to the following passage (vol. i., p. 41):

"Deeds of violence and wrong to the weaker races unfortunately have marked the history of European colonization almost everywhere during the years since Columbus began his first colony. If those committed by the early Spanish conquerors, who for more than a century were the only representatives of Europe in colonization enterprise, have been more widely published than others, the chief reason is because they were more vigorously condemned by their own countrymen, without regard for national prejudices. In the sixteenth century the moral sense of the Spanish people revolted more keenly at cruelty and oppression of the Indians than did that of England or Holland in the seventeenth and eighteenth, when their colonizations began. The destruction of the natives of San Domingo and Cuba is familiar to all, while the like extermination of the Tasmanians, the Bosjesmen and Hottentots of South Africa, and even those of the old New England tribes, are hardly spoken of. It is mainly so because the Spanish historians held justice above national vanity, and denounced the misdeeds in strong language, while those of England or Holland kept silence on the atrocities of their countrymen. Neither England nor Holland has produced a Las Casas."

This could not be more truly expressed. Similar passages, equally forcible, might be quoted to show how well and honestly the author has carried out the task he has undertaken. Some flaws in the spelling of Spanish words, especially proper names, are not worth specifying.

JOHN LANE NEW YORK

The Nation

VOL. LXXX—NO. 2082. THURSDAY, MAY 25, 1905. PRICE TEN CENTS.

New Books of Notable Interest

TO STUDENTS OF PRESENT-DAY CONDITIONS

Dr. J. A. Fairlie's National Administration of the United States

This book is the first comprehensive and systematic work of the kind; it has been written from the primary records, and is equipped with a select bibliography covering all the most valuable and accessible sources. Its style is clear and it is admirably free from bewildering digressions.

"In view of recent complications and difficulties caused by a lack of definite understanding of the powers of President and Senate, this exposition by one who has carefully studied the subject, is most valuable as well as apropos."—*Detroit Free Press.*

Cloth, 8vo, 274 pp., $2.50 net (postage 18c.)

Gen. Henry L. Abbot's Problems of the Panama Canal

Gen. Abbot's book, while not exactly technical, being intended for the general reader who is interested in following the discussions in Congress, deals closely and from first hand knowledge with the scientific details of the Panama Canal question.

"The book should command attention by the author's familiarity with the subject—he was a member of the Comité Technique, and subsequently consulting engineer of the new Panama Canal Company—and the clear and concise fashion in which the subject is put before the reader."—*Brooklyn Daily Eagle.*

Cloth, 12mo, $1.50 net (postage 12c.)

Mr. Arthur K. Kuhn's *translation of* Professor Meili's International Civil and Commercial Law

By F. MEILI, Professor of International Private Law in the University of Zurich, Delegate of Switzerland to the Hague International Conferences. Translated and Supplemented with additions of American and English Law by ARTHUR K. KUHN, Member of the New York Bar.

There has been no very recent opportunity for jurists to acquaint themselves with Continental European theory and practice of International Private Law. Therefore, a new work dealing with the far-reaching changes made during the last half-a-dozen years is most timely and will be found full of suggestion and interest to both jurists and students of comparative politics or history.

Cloth, 8vo, $3.00 net (postage 18c.). Ready this week.

A NEW VOLUME IN THE CITIZEN'S LIBRARY

Professor Ross's Foundations of Sociology

By EDWARD ALSWORTH ROSS, Ph.D., Professor of Sociology in the University of Nebraska, author of "Social Control," etc.

Half leather, $1.25 net (postage 11c.)

A NEW NOVEL OF EXCEPTIONAL INTEREST

The House of Cards A RECORD

By **JOHN HEIGH,** Sometime Major U. S. V.

It is a study of the dominant man of to-day as the last fifty years have made him, of his absorption in other than public interests, and of the results of his indifference. The personality of the ex-major who tells the story is uncommonly attractive, for it is that of a keen observer, just at the age when the wit is ripest, the judgment mellowed, the horizon broadest. *Published this week. Cloth, $1.50.*

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

JUST PUBLISHED

Walker's Essentials in English History

$1.50

THIS volume was prepared for a year's work in the high school. The essential facts in the development of the British Empire are vividly described, and the relations of cause and effect are clearly brought out. The narrative follows the chronological order, and is full of matter which is as interesting as it is significant, ending with a masterly summary of England's contribution to civilization. The numerous maps give to every event its local habitation, and the pictures are reproductions of real objects, and serve not only to vivify the text but also to stimulate the historical imagination. In the appendix is given a brief bibliography for a working school library, as well as a more comprehensive bibliography of English history.

The Nation.

NEW YORK, THURSDAY, MAY 25, 1905.

The Week.

Mr. Roosevelt has again flinched before the "stand-patters." Late last autumn he was going to ask Congress to revise the tariff. He had set his teeth together and was determined to rescue the people from the protected and bloated monopolies. But Speaker Cannon, Representatives Grosvenor and Dalzell, and Secretaries Shaw and Wilson pointed out to him the error of his way. He wavered in his resolution, decided to postpone action, and finally did nothing. Thursday last the President was again in a state of terrific determination. He had issued an order that Panama Canal supplies should be bought of the lowest bidder. His obvious purpose was—to use the phrase of a "close friend"—"to make the hogs take their feet out of the trough." On Friday, however, he was less disturbed by the spectacle of hogs' feet in the trough. The "stand-patters" had also been heard from. The Administration announced that it would only charter, not buy, the desired vessels, and that it would purchase merely such supplies as were "immediately necessary." This will give the "stand-patters" a chance to rally to the preservation of our lives and liberties. In his willingness to pose as a man of putty in the hands of the protected interests, President Roosevelt has shown unusual devotion to duty. Nothing could be more nauseating to a man of his temperament than to appear publicly as the mere passive tool of monopoly and corruption. But, persuaded that the salvation both of his party and of the nation demands the sacrifice, he subordinates his personal desires to the welfare of his countrymen.

The speeches and observations on the tariff by Representative Grosvenor of Ohio have long been valued by tariff reformers as providing the complete and perfect *reductio ad absurdum* of that policy. Mr. Grosvenor's remarks on the purchase abroad of Panama Canal supplies show his facility in rendering such service to be in no respect impaired. "The country," so observes our philosopher, "would rather pay a little more for something that is made at home, furnishing employment for our workingmen, and giving them better pay than their neighbors abroad." If by "the country" Mr. Grosvenor means the Government, it is fairly evident that it would rather do nothing of the kind; its own action, in the Panama matter, proves the contrary. If he means the people of the country, one is tempted to propose the familiar test of offering to the buyer the same article at two widely different prices, explaining meantime that the higher price will enable the seller to give larger pay for labor. Every one knows what the result would be. Benevolent buyers would ask for very clear evidence of what was being done for the workmen of the favored seller, and equally clear evidence that the difference in price did not go into the manufacturer's own pocket. The average buyer would purchase the article wherever he could get it cheapest. The absurdity of this argument by the high-tariff advocates, when their own wives are rummaging counters of rival dry-goods stores to discover the lowest prices, is surpassed only by that of their sudden retreat, when cornered on this line of reasoning, to the exactly opposite argument that the American buyer does not pay a higher price because of protective tariffs.

"No split in the Cabinet" is the word which Republican organs are passing along; but everything depends upon your definition of "split." Secretaries Shaw, Wilson, and Metcalf, who are fiercer protectionists than McKinley or Dingley ever dreamed of being, are much disturbed over the President's Panama order. They see in it the beginning of that fight for tariff revision which they and Speaker Cannon were sure would rend the Grand Old Party asunder. Secretary Shaw's plan to retire was announced some time ago. Secretary Metcalf now finds that his private interests are pressing. Secretary Wilson must reach the same conclusion, unless he is persuaded to abandon the extreme "stand-patters." He cannot remain and be lukewarm in a contest in which the Administration needs all the support it can muster. Their places will inevitably be filled by men in sympathy with President Roosevelt and Secretary Taft. This may not be a split, but it is certainly what the Century Dictionary calls "a division or separation, as in a political party."

Rather tardily the President has come to the decision to accept no more free transportation from the railroads. He may well have been moved to such a course by the renewal of the fight on rate regulation. There has been an obvious impropriety in the President's enjoying hospitality from the very roads he proposed to hale before the Federal courts. Evidently, he now means to proceed with the investigation of discriminating rates unhampered by future obligations of this sort. While he is to be commended for acting upon this scruple, it should have been entertained before railroad regulation had become a capital issue in Congress. The spreading of free passes broadcast among legislative and executive officers, while not inevitably a measure of indirect bribery, rested upon a general easy-going tradition which lent itself readily to perversion. Clearly, a President should not do what a man of fine feeling would regard as beneath his dignity, and we fancy that no lawyer would solicit or accept a pass on a line against which he held a brief. We believe that to maintain the decorum of our highest office should not involve undue sacrifice to the incumbent, and we would cheerfully see Congress add enough to the pay of the President to permit him to travel extensively in a manner befitting his position.

After the gossip that had been rife for the last five months over the railroad rate-commission bill in Wisconsin, its actual passage on Thursday seemed almost an anti-climax. When the present Legislature was chosen in November, we were told that it would pass at the drop of the hat any measure that Gov. La Follette wanted. Then the tune changed; the Senate was in control of the other side, and the hope of any rate legislation at all would have to be abandoned. Next there was to be a compromise, the Governor getting his Railroad Commission, but his opponents remaining inflexible on the proposition that it should be elective instead of appointive. Now, in the fifth month of the session, the bill is quietly passed, substantially as the State Administration wanted it, except that rates objected to will remain in force pending appeal. Of course, the immediate importance of this action to the rest of the country is that it leaves La Follette free to go to the United States Senate whenever he chooses. Local politics may settle back into a more or less even routine again, but with several differences: bolting from a State convention will be a thing of the past, for there will be no more State conventions in Wisconsin so long as the primary law remains on the books; corporation taxation and rate regulation are no longer before the Legislature, and, finally, the powers that once ruled the Republican party in the State are beaten on their last stand.

Both parties in Ohio, it is now predicted, will declare in their platforms this year for railroad rate regulation. While the plank approved by Gov. Herrick relates especially to "the recommendations made by the President on this subject in his last message to Congress," for national legislation on in-

terstate commerce, the same principles would logically apply to State control of rates within a single State. As if to set examples to the national Senate, the State legislatures have been turning out railroad legislation this year with the utmost alacrity. In Washington, Montana, Wisconsin, and Indiana, rate commission bills have been passed, though in Montana the Governor interposed his veto. How these experiments may affect the national issue can only be guessed. To see their own officials struggling with the intricate and perplexing problems of rate fixation should give the people of the States concerned a good deal clearer notion of just what the proposed national reform involves, and should correspondingly influence their Senators.

The decision of the Venezuelan court in the case of the New York and Bermudez Asphalt Company brings nearer home a very ugly international complication. It appears that, according to the Venezuelan judicial procedure, the presiding judge of the Federal Court of Cassation first renders his decision. From his decision an appeal lies to the full bench, which, it is anticipated, will approve the forfeiture of the Asphalt Company's concessions. It has every right to do so, and any claim on our part that we may demand of Venezuela's executive that he shall upset the decision of his courts, or shall submit it to an arbitration, would be an international blunder of the gravest kind. To see how indefensible such a course would be, it is only necessary to put England in our place and the United States in that of Venezuela. Would not every American jingo be ready to fight at the drop of the hat if England should demand that Mr. Roosevelt go behind the decision of the Supreme Court because Mr. Balfour had grave doubts as to the honesty or the judicial quality of that court? If Venezuela submits to the Rooseveltian demand, she acknowledges herself a vassal state by all the rules of international law. Perhaps the regrettable Bowen-Loomis affair will incline the Administration to the wisdom of a second thought—if in Panamanian matters, why not in Venezuelan? Certainly the Government should not fail to remember that Great Britain, notwithstanding her imperialist policy, long ago adopted as a general rule that her subjects who invested in a foreign state did so at their own risk. Our policy of imperialism apparently affords the Trusts the right to use the Federal Government to pull their chestnuts from a foreign fire.

Those who look upon trades unions as the champions of the masses without regard to creed, race, or color, should take note of the action of the Amalgamated Association of Steel Workers at Detroit last week. Against the protests of President Shaffer, the Association postponed for a year the consideration of a proposition to organize the colored iron, steel, and tin workers of the South. The Southern white delegates objected on the familiar ground of the noxious equality which would result, and laid stress on the danger that, if the negro obtained a standing in the union, he could then come North, thus living up to the familiar Southern doctrine, that any one attempting to take the negro away in numbers is guilty of a serious offence. At the same time the colored brother must have no equality at the ballot-box or in social life, or in the trade unions. The benefits of organized labor, it thus appears, are not the inalienable right of all workers. Mr. Gompers has even, we believe, defined the union as essential to the liberty of the workingman; obviously, we must read liberty of the *white workingman*. It is in this spirit that the labor gospel is now accepted throughout the North, where most unions rigorously exclude colored men. President Shaffer evidently saw what a mockery this position makes of many union pretensions, for he declared that all men who are competent workers should be members of his association.

Race riots against negroes who take the places of Chicago strikers resulted on Sunday in the killing of two men and the wrecking of considerable property. The Chicago Federation of Labor adopted resolutions commending the "boldness, spirit, and humanity" of the striking school children who "left school, threw stones, and rioted in the streets" because non-union drivers delivered coal at the school buildings. To cap the climax, the Mayor and the Sheriff discussed the possibility that troops might be necessary to preserve order if the strike spread. The race riots only emphasize the selfish turbulence of the strikers, who are trying by violence to play the dog in the manger, willing neither to work themselves nor to suffer those who are willing. The formal action of the Federation as regards the schools illustrates the fact that not only service in the militia, but also upon Boards of Education, constitutes, to use the language of the Federation, "pseudo-plutocratic cringing" of "ignorant lackeys" to capitalism. The Mayor reminds one of what Mark Twain said of Louis XVI.—that he was very good at chasing public diseases, but poor at overtaking them. When gangrene sets in at the elbow, he is ready to amputate at the finger. If rioting spreads, he must think about asking for troops. Should the torch be applied to the city, he would probably be ready to discuss sending in a fire-alarm.

The annual address of President D. M. Parry of the National Association of Manufacturers was an appeal for that individualism which has been the dominant force in developing the American continent. He dwelt perhaps with too much emphasis on the word Socialism. The day has gone by when that term—so often used recklessly as a sort of curse upon all political and industrial movements of "the enemies of capital"—can of itself frighten people. Men who are more interested in things than in the empty names for them, have discovered that the lawlessness of a vast corporation may make for socialism more potently than the ignorant and savage conduct of a labor union. But the fundamental principle which President Parry lays down cannot be too often repeated. The rules of many of our trades unions are standing proof that the average workman has failed to grasp it; he does not realize that a restriction upon his skill and energy is a premium upon laziness and incompetence, a denial to him and his children of legitimate opportunities to develop intellectually and morally and to rise in the world. The system of individualism which, by opening the door of hope to the poorest boy in the land, has been such a stimulus to America, is incompatible with the theory of the closed shop.

The filing of charges against Frank W. Solon, superintendent of street cleaning in Chicago, for violations of the civil-service act has, according to the newspapers of that city, resulted in giving the politicians some serious "mental shocks." Solon is charged with receiving money for political purposes, with abusing his official position for the same reason, and with improper and immoral conduct in office. The Civil Service Commission which is to hear the case, will be told that the superintendent of street cleaning called a meeting of city employees and asked them to contribute to a campaign fund to help elect Judge Dunne, for, he warned them, "if Mr. Harlan, the Republican candidate for Mayor, is elected, you'll all have to 'walk the plank.'" Again, it will be explained that Solon discharged teamsters from his department who had not "come down" with their assessment, or whose political activity seemed to be decreasing. Solon's alleged "immoral conduct" consisted in "holding up" gamblers and other law-breakers for money to pay for the protection he assured them he could give by reason of his political influence. The charges seem to be of a rather serious nature, and yet the city "ring" is astonished that Mayor Dunne's young Commissioner of Public Works, Mr. Patterson, should have preferred them. Had Mr. Harlan been elected, they concede that some one might very well have raked up this civil-service law, but for one of their own—well, they're "all up in the air"!

By approving the "anti-mob" law passed by the last Illinois Legislature, Gov. Deneen has ranged his State beside Indiana and Ohio in active official condemnation of lynching. The bill, introduced by Representative Green of Chicago, defines a "mob," and provides that any one helping to compose such a gathering may be fined or imprisoned in the county jail. It provides that "any person or persons who, under the pretence of exercising correctional powers, actually inflict injury upon a person charged with crime, may be imprisoned in the penitentiary for a term not exceeding five years, being also subject to an action for damages." The new law gives the surviving heirs of the victim of a lynching the right to recover from the city or county where the outrage takes place damages not to exceed $10,000. Finally, the law provides that a sheriff who fails to stop a lynching shall be removed from office by the Governor, and reinstated only upon the presentation of satisfactory evidence that he did his best to protect his prisoners. In its main features, the new law is like that passed by Illinois's neighboring States, which, though failing to prevent lynchings, has discouraged the crime. Since 1882, 21 lynchings have occurred in Illinois, three being recorded in 1903.

Figures now available show that Baltimore's much ridiculed Municipal League was a genuine factor in the recent election in that city. In twenty-four wards, candidates for the City Council were voted for; in twenty wards the League recommended either the Republican or Democratic nominees, and in sixteen wards the candidates so endorsed made substantial gains over the party vote of 1903. Thus, of the twelve Republicans picked out by the League for support, eight gained from 249 to 968 votes apiece. Four lost, their losses ranging from 41 to 260. Among the Democratic candidates the result was even more promising. Every one of the eight men approved by the League gained support as compared with the vote of 1903; the figures here varied from 144 to 579. That there was a "Democratic tide" running this year in Baltimore, the detractors of the Municipal League have not failed to point out in order to explain the Democratic gains in these eight wards. The "reformers" merely reply by asking why, in spite of the tide, the eight Democrats opposed by the League lost votes? They are satisfied that the net gain of 5,000 votes in the twenty wards by their candidates meant much in a total of 64,000 ballots. In whatever light the result be viewed—whether the League merely happened to pick popular candidates in sixteen wards, or whether voters really trusted its disinterested judgment—Baltimore is pleased with the sort of men elected to her Council.

The chief business of the extra session of the New York Legislature will be the case against Justice Warren B. Hooker. This is a matter pressing for immediate action. Most of the charges against Hooker have been public property for more than a year, and the Jamestown Bar Association, the State Bar Association, and the Assembly Judiciary Committee have all found Hooker guilty of conduct unbecoming a judge. His usefulness in the position is obviously ended, and he should be removed with the least possible delay. This is unfinished work of an extraordinary kind, for which the legislators may properly be called together again. Gov. Higgins, however, is quite right in refusing to ask members to return to the routine tasks of the session. The present Legislature has had its day of grace, and its opportunity to deal with appropriations, taxation, gas bills, rapid-transit bills, and all the rest. The time for repentance is past, and the members should stand or fall on their records. The gas question, indeed, is extremely ticklish for both parties; any attempt to fasten on Tammany the odium for dollar gas may reveal still further the venality of the Republican machine. The chance to rescue the consumer from an extortionate monopoly, and to redress many other wrongs, should be left to another—and, we hope, better—Legislature.

Where the law attempts to set the price that a public-service corporation may charge, it is important that the prices charged for the same service in other places be taken into consideration. The Consolidated Gas Company is wholly within its rights in publishing a graphic comparison between the prices it exacts and the prices asked elsewhere. It would, however, lend weight to such a presentation if a comparison were made not only of prices charged, but of costs incurred in various towns. To convince the taxpayer that he is not unduly charged for light, he must be certain not only that he is served more cheaply than his neighbor in another place, but that he is not asked to contribute relatively more to a margin of profit than his distant cousin. It would be no valid excuse for exorbitant freight rates from Dakota to the seaboard that the cost per mile is less than the cost to the farmer of bringing the grain from the farm to the freight station. In the production of gas, for example, much depends on the cheapness of materials, especially coal, as well as on the area served. The mains necessary for a compact urban area may not cost as much as the mains supplying the scattered homes of a wide-extended village. What is a reasonable price for one locality may be outrageous if charged in another, and vice versa. The trouble about a table of relative costs is that they are not easily discovered and less readily verified, whereas a comparison of prices is easy to obtain and arithmetically clear. In the long run, it will prove that, while comparisons may shed light on the question of what prices the law ought to set, every case must eventually be decided on grounds of its own. It is the old saw over again, that "every tub must stand on its own bottom."

What is art? is a very practical, every-day question in the Customs Department, and it is answered with varying success. For example, the appraisers struck the white the other day when they declared Miss Mary Cassatt's etchings to be art—a decision which covers painter-etching generally—while last week they were less well inspired when then denied a rating as art to Gérôme's statuette, "Bellona." Possibly, some impressionist sits on the board, and merely expresses his distaste for Gérôme's eminently classical manner. The ready acceptance of an impressionist like Miss Cassatt gives some color to the view, but the probability is that the decision is based merely on the technicality that sculpture as defined in the Dingley act must be cut in stone or cast in metal. Now the "Bellona" is built up out of ivory and bronze, and presumably will be taxed as "manufactured ivory," or as an "article not otherwise enumerated." Thus is protection extended to such American sculptors as may practise the chryselephantine mode.

An amendment to the Separation bill —now before the French Chamber of Deputies—stipulating that the names of holidays should be secularized, is merely a straw indicating the strength of the anti-religious current in France. Compared with the Revolutionary calendar, which secularized the names of all the months, abolished the weeks in favor of decades, and established five "Sansculottides" national holidays, M. Richard's proposal is of the utmost modesty. He is still willing to reckon in terms of the Advent, and merely wishes to do away with those religious names which come home intimately to the average citizen. Thus, Christmas as "Family Day" will become as devoid of superstitious associations as New Year's, while the Fête of the Assumption, which has not even the warrant of history, will disappear in "The Feast of Harvest." Of course, there is no likelihood that a Government which has a very full programme of reforms already docketed, will undertake to purge the calendar of superstition. The proposal, however, illustrates the renunciation of the historical sense and the unrelieved doctrinairism which prevail in the ultra-Radical and Socialist circles of the French Republic. But it is the merest froth upon the wave of the larger movement.

A "CRIMINAL PHENOMENON."

Even as President Shea, despairing of the success of his moribund Chicago strike, was delivering his "frenzied" ultimatum to the President of the United States, the *Quarterly Journal of Economics* published an interesting history of the International Brotherhood of Teamsters, by Prof. John R. Commons. While this essay was evidently written before the strike had reached its acute stage, it gives an excellent account of the policies and methods of the teamsters' union, and throws no little light upon the real issues involved in the controversy.

While other things have contributed to its rapid growth, the organization has waxed strong largely because of two circumstances. The first is that a teamster occupies a peculiar strategic position in the structure of modern industry. The service which he performs is absolutely necessary to the ongoing of business, and a strike of one or two or ten men may paralyze the operations of large factories or stores employing thousands. Thus even a small union may create a disturbance out of all proportion to its numbers, and inspire such fear as to lead employers to accede even to unreasonable demands rather than run the risk of a strike. Add to this the unlimited possibilities of sympathetic strikes in aid of workmen in other industries, or other branches of the teaming industry, and we have a situation well calculated to impress the labor boss with an overweening sense of his own importance.

The second circumstance is that, as Professor Commons says, "the teamster's occupation is more exposed than that of any other craftsman." Every driver, it is obvious, "is an establishment of himself." In the crowded streets, with 30,000 teamsters organized, there is not much room for the unorganized. Actual or expected violence is looked upon by employers and teamsters as a matter of course. Blockades and obstructions, too, are even more effective than violence in preventing the non-union teamster from reaching his appointed destination, and so in making it useless for any one to employ him. In short, President Shea and his *confrères* have for some time undertaken to say who should or should not use the streets of Chicago, and who should or should not drive a wagon without having his skull smashed or running into an impassable blockade. Small wonder, then, that he adopts such a lordly air when a mere President of the United States comes into his domain, and that he invokes the shade of Ben Butler to warn Federal troops off the sacred preserves of the Brotherhood of Teamsters.

It should not be understood that none of the aims of the Chicago teamsters have been commendable; in fact, the union was distinctly in the right when it endeavored, two or three years ago, to substitute stated hours of labor and definite rates of wages for the indefinite terms upon which employment used to be based. But its attempt to drive from the streets of Chicago any teamster who would not pay dues to a *union* for the privilege of using highways built with the proceeds of public taxation, is too outrageous to admit of argument. This feature of its policy made the International Brotherhood of Teamsters a criminal conspiracy to obstruct the public thoroughfares and maim or kill such wayfarers as did not wear the union button.

Incidentally, the history of the Chicago teamsters exhibits most of the other features with which we have become familiar in recent years. Having raised wages beyond what other kinds of unskilled labor could hope to get, the teamsters' union sought to enforce the closed shop, or closed stable, and restrict admission to their labor trust. Then, too, the usual opportunities for graft appeared, when some unscrupulous employers saw that, by collusion with corrupt labor bosses, it would be possible to harass competitors and raise the prices charged to the public. The climax of high-handed arrogance was reached when a union succeeded in compelling Marshall Field and owners of other stores or office buildings to sign written contracts to burn coal instead of natural gas during the summer; the gas, presumably, being considered unfair since it was delivered through a non-union pipe line. In fact, Professor Commons is obliged to remark that it is only since an alleged reform effected in 1903 that "the teaming industry can be studied as an economic rather than a criminal phenomenon."

And this is the union which now complains to President Roosevelt that "for the last two or three weeks there has been a continuous howl for the Federal army"; and assures him that its members are so anxious "to protect the public peace and welfare" that, "without intending to be discourteous or suggesting a threat," they propose to follow the advice of Ben Butler and apply the torch in case the Regulars are sent to Chicago. Yet the license which Shea has enjoyed in the past enables us to understand his present state of mind. For some time he has been the virtual owner of the streets of our second largest city; and he is naturally impressed with the responsibilities attending such proprietorship. Not even the President of the United States has the right to prevent American citizens from pursuing a lawful calling that requires them to use the highways; and it was not strange that the teamster saw fit to warn a mere President to keep his fingers out of the pie. If Mr. Roosevelt reads Professor Commons's authentic record of the achievements of the International Brotherhood, he will probably wonder at his own temerity in making a bold front against such a potentate as Shea.

"BUYING WHERE YOU CAN BUY CHEAPEST."

"The free trade doctrine of buying where you can buy cheapest" is the scornful description of the Administration's Panama Canal-supply policy, given last week by Representative John Dalzell of Pennsylvania, the high priest of protection. "If not withdrawn," says Mr. James M. Swank, manager of the Iron and Steel Association, this hateful principle will be properly dealt with by people "who will bring the matter before Congress at its next session." We strongly suspect that when Congress does take in hand this odious suggestion that the buyer of necessaries lies under no moral duty to pay a high price when he can get what he needs for less, it will be found that the people at large have been doing some thinking on the subject.

It is not often that the real issue in the question of high protective tariffs is so squarely presented. We have, to begin with, the Government itself asserting the costliness of that policy. The Administration's plea for its own position, as stated by Secretary Taft, is quite unassailable. "If," said the Secretary in a public report given to Congress as long ago as last January, "the Isthmian Canal Commission are not bound by any restriction of Congress as to where they shall purchase machinery, material, and supplies, then it would seem to be their duty to construct the canal as cheaply as possible, and so to buy what they need where they can get it cheapest. This, however, is certain to produce, every time that a large contract is awarded to a foreign manufacturer or dealer, an outcry on the part of the American unsuccessful competitors. If Congress approves the policy of favoring American manufacturers and dealers, even if it increases the cost of the construction of the canal, then it seems to me only just that it should declare this policy by law and lay down a rule which the Commission can easily follow."

We need not stop to draw attention to the contemptuous language in which the attitude of the tariff-protected manufacturer is here referred to. The point of importance is, that the Secretary's conclusion cannot be contested except by arguing that the Government is under no obligation to keep down the cost of canal construction. If the Commission is not bound, in the absence of statutory requirements to the contrary, to buy its supplies wherever they can be bought at most advantageous prices, then it is under no restriction as to prices. If its duty is to reject the bids of a foreign manufacturer, on the time-worn plea that the higher home price is

promptly paid over to the laborer, it is equally bound to accept the higher bid as between two home manufacturers, when the costlier article is alleged to provide more handsomely for the workman. In to what maze of absurdity and trickery one must inevitably be led by a moment's concession of such a principle, we hardly need point out. There is absolutely no other position which a Government mindful of its duties can assume than that of Secretary Taft.

We lay stress on this sufficiently obvious phase of the situation because of the strong light which it throws on the whole high-tariff controversy. First, it illuminates the moral position of the protectionist legislator. Confronted with the Government's duty under existing law, Mr. Dalzell replies that "this is no reason why an Administration that came into power on a protection platform" should resort to expedients so distasteful. Our protectionist Speaker Cannon, answering Mr. Taft's assertion that Congress might have spoken if it wished the Government to restrict the Commission, retorts that Congress "did not intend to take any action"; "it never entered the mind of any member of Congress" that such plain dictates of public economy would be pursued by the Government when "the Democratic and Mugwump press is agitating a revision of the best tariff law known in our entire history." Here, we say, is the morality, or rather immorality, of high protection in a nutshell. The tariff first; economy of administration and honest observance of public trust may come afterward, if convenient. Much is gained, at any rate, when the real meaning of the high-tariff fetish is thus revealed by its own idolaters.

It is quite possible that, as Mr. Swank intimates, the "stand-patters" "will bring the matter before Congress at its next session," and it is perfectly true that a very small part of the requisite supplies can have been purchased before that time. But the Congressional "stand-patters" will have before them, then, no such simple task as they might have had if a restrictive law had been quietly slipped through in January. The clearness with which the issue has been raised, in the present controversy; the unassailable legal and moral position of the Government; the tortuous shifts to which opponents of that policy have been driven; and, more than all, the public assertion which has been wrung from them that high protection means an addition to the prices that already weigh so heavily on the community—these new factors in the case will put a quietus on efforts to smother the tariff issue under the familiar mass of technicality and sophistry. They will, for one thing, bring instantly to the front, in current discussion, the practice of our great steel manufacturers, who undersell European makers in foreign markets and straightway clap on a price, for American consumers, 40 per cent. above the foreign level. It is no organ of the "Democratic or Mugwump press," but the protectionist New York *Tribune*, which indulges in these warning words:

> "When the 'stand-patters' drive home to the people a realization of the fact that steel rails can be purchased abroad for the Panama Railroad at $20 a ton, whereas they would compel the Government to pay our manufacturers $33, though our manufacturers would deliver those same rails in Great Britain for $22 a ton which cost them at Pittsburg about $12 a ton, instead of winning sympathy for our traders so 'abused' by their own Government, they will awaken sympathy for our private consumers."

Inasmuch as it is our private consumers with whom the next Congress will have to reckon for its public actions, the force of the *Tribune's* warning is obvious. Perhaps their own household experiences may by that time have given them added interest in the "free trade doctrine of buying where you can buy cheapest."

CORRUPT BUT DISCONTENTED.

It recalls the days of the Boston Tea Party to read how indignant citizens of Philadelphia on Thursday stormed a committee room and their Common Council's meeting chamber, carrying halters and bawling "thieves" and "robbers" at the men who betrayed the city under the very eyes of the mob. But when the Boston tea was thrown overboard there had long been serious mutterings of discontent. Last week's outbreak in the City of Brotherly Love is all the more astonishing because that town has gone its way admittedly "corrupt and contented." Only a few crackbrained reformers, municipal theorists, and what not have up to this time been stirred to action by the tyranny of the Durham machine. Even the prayers of the clergymen for Mayor Weaver aroused nothing more than Homeric laughter. At any rate, however much one may deprecate the mob features of the recent outburst, decent men the country over were heartened and rejoiced to read that the Philadelphia worm had turned at last, that Durham and his band of plunderers had gone a step too far.

Unquestionably the temptation to a riotous demonstration was of the greatest. Two propositions were before Councils. One was made by a syndicate headed by Edward B. Smith & Co., responsible bankers, which offered to pay to the United Gas Improvement Company not exceeding twenty millions of dollars for its improvements of the lighting plant; to pay to the city for use of its plant an annual rental of $1,250,000 for the term of the lease, seventy-five years, and, in addition, one-third of the net profits during the first ten years, and one-half during the remaining sixty-five years. Furthermore, the syndicate offered to supply municipal lighting free of cost; to advance the twenty-five millions of which the city stands so greatly in need; to give the municipality a representation of one-third in the management of the plant. Finally, it stood ready to have the city direct whether its income should or should not be devoted to a reduction in the price of gas to consumers. No such liberal proposition was ever before made in Philadelphia. It was not even considered. True, the Councilmen, who marched home under police guard, listened to the speeches of men like ex-Judge Gordon and the former minister to Italy, William Potter, but their orders had been received. With astounding brazenness they testified to their corruption by voting for the proposition of the United Gas Improvement Company, giving it a seventy-five year extension of its lease for twenty-five millions, without any other compensation, and postponing 80-cent gas for the consumer until 1956—this on the pretence that the Smith syndicate had no standing.

Fortunately, the grabbers have not yet won their fight. Mayor Weaver will, as he openly declares, resist the measure. Then, no doubt, Councils will pass the bill over his veto. This has been the programme to date. Whether the Councilmen will dare to do so in the face of so deeply stirred a public remains to be seen. Every newspaper of standing in the city is against the steal; even the *Inquirer*, generally so subservient to the machine, advises Councils to drop the lease question—even while falsely asserting that the ring's bid is the better. It had seen the storm gathering, and had, perhaps, read from the portents a possible overthrow of Durham himself, incredible as that now seems. But if, as so many observers assert, political affairs must become very bad before the patriotic American will insist on a housecleaning, that period would seem to have arrived in Philadelphia. From this point of view it might be well for the "gang" to have its way and betray the taxpayers' interests. So dastardly an outrage would then remain for years to come a thorn in the side of decent Philadelphians, to rouse them to a sense of their shame.

In its broader aspects this Philadelphia scandal is not a whit different from similar occurrences in New York and other cities. The managers of many of our public-service corporations have cast away all restraint and hold themselves above the laws, statute or moral. License to purchase legislation or scandalous contracts appears theirs by divine right. The consumer, they argue, is sure to be benefited by monopolization and the carrying out of the schemes born of their wisdom; hence, any bribery they may resort to is legitimate and defensible. But there inevitably comes a time

when they overreach themselves. When the storm of public indignation breaks over them, none are more astounded than they, conscious as they are of their own benevolence and rectitude. Outcries for municipal ownership, the unfavorable action of a Legislature, fill them with amazement and with alarm for the community. They rend the air with cries of confiscation, with elaborate mathematical demonstrations that some other city a thousand miles hence is bled more severely. And all the time these corporation managers pitifully fail to see that the crop which they are harvesting is merely of the seed they sowed. Their pretensions make it possible for sound-minded leaders of public opinion to turn to municipal ownership, not because they desire it, but merely as a man of peace resorts to a revolver in dire extremity. The most pregnant issue in our cities to-day is whether the taxpayers or the corporations own them, precisely as the only burning question in many States is whether the railroads and the tariff-favored Trusts or the people shall be supreme. Upon this fact we have dwelt before and we propose to dwell again. The Philadelphia discontent is scarcely a more striking sign of what is under way than is the recent vote in Chicago.

A CENTURY OF BOUNDARY ARBITRATION.

A few days ago a company of American and Canadian engineers left Victoria to mark the recently determined boundary line between Alaska and British Columbia, and they will be followed shortly by several other parties. By 1906 the decision of the Alaska Arbitration Tribunal should be definitely translated into metal and stone, thus, for all time, so far as can be foreseen, delimiting the boundaries between the United States and British America. The monuments these surveyors are to set up may rightly be considered memorials to the cause of arbitration. At one time or another practically every foot of the boundary line has been in dispute. At certain periods both countries were aflame with anger over it, and hostilities seemed inevitable. It is, therefore, cause for national congratulation that this protracted boundary controversy has at last been peacefully concluded. Not war, but arbitration and diplomatic negotiation, are the means which were used to settle questions fraught with untold dangers to both England and the United States. The Alaska Tribunal was only the last of a long series of arbitrations beginning more than a century ago.

Curiously enough, as the document itself expressly states, the section of the peace treaty of 1783 describing the possessions of the United States and Great Britain was inserted with the intention of making impossible future disputes. A more productive cause of discord could hardly have been designed. Although the description was given with the greatest attention to details, it was impossible to interpret these geographically. Much of the territory had never been explored, and still less accurately surveyed. The commissioners attached no map to the treaty, and left no written record of their intentions. Their labors had hardly ceased before the disputes began. The eastern Maine boundary, according to the treaty, was the St. Croix River; but at that time there was no St. Croix River. There were two streams, whose mouths were fifty miles apart, either one of which might have been the one so named by the old French explorers. Again, the treaty left undefined the ownership of the islands in Passamaquoddy Bay, all of which, especially the Grand Manan, were greatly desired by both Nova Scotians and New Englanders.

These problems were, however, simple compared with the description given of the Maine boundary. This was to extend northward from the source of the St. Croix to certain "highlands, which divide the rivers that empty themselves into the River St. Lawrence from those that fall into the Atlantic Ocean; thence to the northwesternmost head of the Connecticut River; thence along the middle of that river to the forty-fifth degree of latitude; thence, by a line due west, until it strikes the Iroquois or Catarquy." What "highlands" were intended? There were several ranges that might, under certain conditions, fit the description. What was the Atlantic Ocean? Did it include the Gulf of St. Lawrence, the Bay of Fundy, the Bay of Chaleurs? What was the "northwesternmost head of the Connecticut River"? There were three different streams, any one of which might have been indicated. Even the "forty-fifth degree of latitude" produced ill-feeling; an accurate survey, it was said, would place many Canadian villages on American soil. The line through the St. Lawrence and the Great Lakes to the Lake of the Woods was also described with the utmost disregard of all known geography.

Here, evidently, were causes enough for strife. Were present-day boundaries of Europe as loosely drawn, we can well imagine that they would be straightened out with the bayonet. Our grandfathers, however, although they occasionally lost their heads, took up the disputed points one by one. John Jay, in his famous treaty of 1794, provided a commission to discover anew the St. Croix River. This met in Halifax in 1796. It found in the French chronicles sufficient evidence to identify the old stream, a certain fort on a certain island in the mouth of a certain river being described. The arbitration commission found the island, with the remains of the fort, in the mouth of the Schoodiac. Since that day it has been the St. Croix. The treaty of Ghent provided for three boundary commissions: one to apportion the islands in Passamaquoddy Bay, one to delimit the northeastern boundary, and the third to extend the line through the St. Lawrence and the Great Lakes to the Lake of the Woods. The first met at Albany in 1817, gave Moose, Frederick, and Dudley Islands to the United States, and the rest, including the Grand Manan, to Nova Scotia. The third commission met soon afterward, and had no difficulty in marking the line through the St. Lawrence and Lakes Erie, Ontario, and Huron. It disagreed, however, in the attempt to trace the boundary through Lake Superior to the Lake of the Woods, and temporarily abandoned work. The commission on the Maine boundary met in 1827, but accomplished nothing. The King of the Netherlands was selected as arbitrator in 1831. His award was repudiated by the United States on the ground that he had exceeded his authority, disregarded the treaty of 1783, and marked an arbitrary line of his own. For years the peaceful settlement of the dispute was despaired of. In 1842, however, Mr. Webster and Lord Ashburton held their famous conferences in Washington, the result of which was the present boundary. At the same time they drew the line through Lake Superior to the Lake of the Woods, and also selected the forty-ninth degree as the dividing line from the latter point to the Rocky Mountains, thus confirming the boundary provisionally determined in 1818.

Nothing now remained but the Oregan boundary; and that, after constantly threatening war and furnishing one of the shallowest of campaign phrases —fifty-four forty or fight—was peacefully settled a few years later. This settlement, however, left undefined certain islands in the San Juan de Fuca Straits, and the question of their ownership was submitted to the German Emperor in 1871, with satisfactory results. The long chapter of arbitration and negotiation was finally closed by the Alaska arbitration, and an unbroken succession of tablets and monuments will soon extend from the Maine coast to Puget Sound and along the Alaskan mountains, enduring evidence, it is to be hoped, that Britons and Americans agree in loyalty to that peaceful law of nations toward which the history of this single border has contributed so many illustrious precedents.

THE ROYAL ACADEMY AND THE NEW GALLERY.

LONDON, April 29, 1905.

"What have you found?" I asked a critic late in the afternoon of Press Day at the Royal Academy. "A few Sargents—and nothing!" I may have passed over a few excellent things hidden in odd corners, but an

exhibition can be judged only by what can be seen, and I have come away from the Academy with the same impression as the critic I have quoted. That Mr. Sargent should stand out so conspicuously helps, I think, to explain how commonplace the rest of the exhibition is, for Mr. Sargent is anything but at his best. Whether he has painted so many portraits that he has ceased to see, or feel, character; or whether prolonged success has made him indifferent to the quality of the work he produces and displays to the public, it is hard to say. But, certainly, in his most important canvases this spring his interest and cleverness are squandered almost wholly upon draperies and accessories, while the people to whom they should be subordinated dwindle into lay figures. He always has had a tendency to leave arrangement in his portraits to chance. Sometimes chance has been kind, as in the case of the "Misses Hunter," where it furnished him with an ingenious problem to work out and an amusing design. But chance has betrayed him cruelly in the large portrait group of "The Marlborough Family;" and neither the historical traditions and an impressive setting nor the combined attractions of the members of the family have stirred his imagination—if he may be said to have any—even to the sham classical composition he found for his three sisters in white of two years ago. The Duke and Duchess, with their two sons, are grouped on the steps at the end, apparently, of a hall at Blenheim, just where, flanked by two banners, the bust of the Marlborough who made the fortunes of the family looks down from the wall above. The perspective is of the stage, stagey; the banners are in a relief that recalls the old stories of the fly on the curtain or the fruit the birds come to peck at. The head of the Duke is carefully modelled and finished; he wears his ducal robes with an appearance of stateliness. But the Duchess, posing on a higher step, is a simpering doll, a mere peg whereon to hang a gorgeous array of millinery. The boys are little more than sketched in—one, the older of the two, vigorously enough, it is true, but, standing close by the side of the more finished figure of the father, he introduces a note of restlessness, he produces an effect of haste, as if Mr. Sargent had been working on time, and time was up before he had got to the end of his task. This effect is heightened by the treatment, suggesting the scene painter, of the cold gray walls and columns of the background.

Nor is Mr. Sargent happier in his large "Countess of Warwick." Like his "Duchess of Sutherland" of last year, it makes one wonder whether all the character he now wants to see in the ladies of rank who sit to him, is in the splendor of their clothes and the artificial elegance of their surroundings. The Countess's draperies are regal in their magnificence, and rendered with all Mr. Sargent's skill; the dress of the small boy perched on the pedestal at her side is in keeping with them; and the landscape beyond is as purely a convention as any ever contrived by Reynolds or Gainsborough. But the Countess is no less a puppet than the Duchess of Marlborough, though her head is tilted back at a tragic angle, and her face wears an expression of tragedy, or martyrdom, or what the reader of the old-fashioned "penny novelette" might have called "haughtiness." I can scarcely understand Mr. Sargent's intention, but the whole attitude strikes me as no less an affectation than the masquerading of Lely's and Kneller's shepherdesses. I can almost fancy he was trying to outdo seventeenth-century posing by presenting her as a fashionable Hagar, defending an extremely well-clad, well-fed Ishmael from visionary dangers. Again, in a portrait of a colonial official, Sir Frank Swettenham, at the New Gallery, Mr. Sargent has been too absorbed in the accessories it amuses him to paint—flamboyant gold and scarlet draperies, a huge globe, a brilliant white uniform—to spare much interest for the man in the uniform. But worse are the portraits of women, at both the Academy and the New Gallery, which look as if they strayed from a Book of Beauty rather than from Mr. Sargent's studio. The only one of his nine portraits, divided between the two shows, that gives a genuine study of character and has something of dignity and reticence, is the "Señor Manuel Garcia," which is very likely the only one he painted for his own pleasure.

Mr. Sargent might be more unsatisfactory and he would still carry off the honors, for the simple reason that he has next to no competitors. Most good artists reserve themselves for other shows, and, as a rule, the portraits now at the Academy and the New Gallery are worth scarcely a glance. One of the exceptions at the Academy is the last large canvas by Charles Furse, who died a few months ago: "Cubbing with the York and Ainsty: Children of the Master, Lycett Green, Esq." It is a group so ambitious in size and subject that most British painters would have fought shy of it. The four children, mounted on their horses, fill the foreground except for a little space to the right, where the hillside falls away, giving a glimpse of the huntsman in his red coat with the hounds, and, beyond, a wide distance. The picture is without atmosphere, it is flat, and more suggestive of the studio than out-of-doors. But it is painted with freshness and vigor, it has animation, it has life, which is just what most of the pictures at the Academy have not got. Another exception is the "Equestrian Portrait of a Boy," by Mr. George W. Lambert, which looks remarkably good, though I hesitate to say anything more positive about it; the hanging committee, with their customary discretion, having skied it just on one side of the "Marlborough Family." There are also two portraits, one in each show, by Mr. George Henry, both of women, and both a distinct attempt at a fine arrangement of color and a decorative design.

Mr. Lavery and M. Blanche are at the New Gallery, but their portraits this year are not very notable, unless it be by comparison with those, for example, by Mr. Herkomer, who, whether painting Bavarian town councillors or British men of note, appears to exult in the vulgar; or those by Mr. Ouless and Mr. Cope and other Academical portrait painters, who see things with about as much distinction and individuality as a camera; or those by the many imitators of Mr. Sargent and revivers of eighteenth-century conventions, who have already tumbled to the depths of emptiness to which imitation and revival invariably lead.

The landscapes, for the most part, are as discouraging. Mr. Clausen, one of the rare few, seldom fails at least to be interesting, and, as an Associate, he is sure of a place on the line, where he escapes the fate of the unfortunate outsider whose work may be as good, but, if hung high or in remote corners, is swallowed up in the sea of commonplace. It is like a breath of fresh air let into a close room to come upon Mr. Clausen's "June Afternoon," a study of the play of light and shadow over a great expanse of open, softly rolling country, as it stretches away for miles and miles under a sky swept by the fleecy white clouds of an English summer day. It is barren of incident in the ordinary sense; it depends on the incident of light and atmosphere; and nothing could be truer than the sudden brilliance of the luminous green where the sunlight falls, than the tender blue of the shadows. His "Ploughman's Breakfast—November," the impression of a very different effect, is marred by the curious glitter of sunlight on his foliage, which destroys all pictorial unity, and which is becoming almost as confirmed a mannerism with him as the violent crude flicker of sunshine is with Mr. La Thangue. I hesitate, however, to find any fault with Mr. Clausen, for his landscapes do hold one's attention, even when, as this year, they are little more than experiments; and of how many others can as much be said? Mr. Edward Stott, trespassing on Mr. Clausen's preserves, has a couple of studies of the effect of light in a shadowy barn, by day, with the sun shining through window and crevice; by night, the dim glow of the new moon mingling with the pale radiance of a shepherd's solitary candle. That an exhibitor at the Academy should put himself down to observing anything in nature, instead of turning out the Academical machine, is to his credit. But Mr. Stott has often made more pictorial uses of his studies. I might mention, too, Mr. Arthur Lemon's white oxen in a cool Tuscan landscape, with beautiful blue and purple depths in the distance, and M. Thaulow's quiet "Night in Flanders." And I am grateful to Mr. Alfred East for devoting some thought to selection and design, even if this virtue is counterbalanced by his prosaic vision and the dry, lifeless quality of his paint. But he is about the only Academician or Associate who shows any sign of an artistic intention in his landscapes, unless I count as artistic intention Sir Ernest Waterlow's bold invitation to comparison with Turner by painting the Thames from Richmond Hill—to his own inevitable discomfiture.

The season would be without sensation but for the sculpture, and herein not because of the merit or want of merit in anything shown at the Academy, but what some have declared the stupidity, others the crime, of the Academicians in not recognizing merit when submitted to them. A statue of "Lycidas" by Mr. Havard Thomas was sent to the Academy; it had already made a stir among certain artists, Mr. Sargent having given it the seal of his approval; but the Selecting Committee withheld theirs, and rejected it. There was time to transfer it to the New Gallery, where it was accepted, curiously, for the New Gallery has degenerated into a mere annex to the Academy, neither better nor worse. But there, anyway, the statue can be seen, while all the papers, even such old friends

as the *Telegraph*, the *Times*, and the *Morning Post*, are busy denouncing the action of the Academy, and rumors are flying here, there, and everywhere of dissensions in the Academic ranks and of the threatened resignation of Mr. Sargent and Sir William B. Richmond. But the denunciations of the press are not very dangerous, running as they do to the sentiment dear to the Briton; the question of Mr. Havard Thomas's bread and cheese, and the comfort of his wife and children, being dragged promptly into the argument, and acquiring far more importance than the question of the excellence of his work. Nor is the threat of resignation more alarming. When, in the old days, Phillips, the Academician, said he would resign if Whistler's picture was not hung, the picture was hung. To-day, the Academy knows it has but to pursue its time-honored policy of sitting tight, and, no matter what it accepts or rejects, there will be no resignation.

As for the statue: it is the nude, life-size figure of a man, modelled in black wax. He stands, with hands upraised, his head slightly bent, his eyes looking downward. The pose of the legs is clumsy, the movement of the arms is angular, and the long, thin fingers of the awkwardly extended hands attain a prominence out of all relation to the rest of the figure. These are serious defects. But the statue has character. The athletic legs, the nervous back, the small head well set on the shoulders, are the work of a sculptor who has known how to use his own eyes. It may not be a masterpiece, but it is an admirable study, it is interesting and suggestive, as sculpture approved by the Academy never is. There is nothing to equal it at the Academy, where Mr. Alfred Gilbert is unrepresented this year, and where the level of mediocrity is unbroken save, perhaps, for a lion in bronze by Mr. Swan, busts by Mr. McGill, and one or two small bronzes by M. Frémiet, who, should he ever visit the Academy, will wonder how he came to be elected an Honorary Foreign Academician.

Two or three years ago, the Academy showed some inclination to enlarge its definition of the "Arts" it is supposed to encourage, by including decorative work among them. But this, evidently, was a passing inclination. There is little, if any, decorative work except the enamels by the school of enamellers Mr. Alexander Fisher seems to be training after—a long way after—him. But I notice that while the Academy allows his followers, mostly ladies, to exhibit, Mr. Fisher himself reserves his enamels for the New Gallery. I have said nothing of the black-and-white, because there is nothing to say. N. N.

COUNT LAVALETTE'S MEMOIRS.—I.

PARIS, May 1, 1905.

There has just appeared a volume on the Napoleonic period, the 'Memoirs and Recollections of Count Lavalette,' former aide-de-camp of Napoleon, and Director of the Post-Office during the First Empire and during the Hundred Days. These Memoirs are reprinted from an edition which appeared after 1830, and which was well forgotten. Count Lavalette died a short time after the Revolution of 1830; he wrote his memoirs in great part during his exile, at Eichstätt and Augsburg, in Bavaria; they were finished in Paris and in the Count's country house at Sèvres.

Lavalette was born in Paris in 1769, and left college in 1788. He witnessed the opening scenes of the Revolution, the taking of the Bastille, the disorders which accompanied the murder of Foulon, on the 5th and 6th of October, when the people went to Versailles and brought the King and the royal family back to Paris. He was a royalist in his sentiments; and when the Revolution became decidedly hostile to the King, he abandoned Paris and enlisted as a private in the army. He joined the army of the Rhine at the time of the sentence and execution of Louis XVI., and went soon afterwards to Worms, with his regiment. "The war," he says, "was in full activity. I read the papers every evening, and when I heard that the Army of the Rhine had had an engagement, I burned with impatience; it seemed to me that I had arrived too late. All the ideas which had tormented me in Paris vanished; the happiness of fighting for my country filled all my thoughts." His colonel, M. de Loriol, was an old and austere man, not accustomed to have plebeian officers in his regiment. "He received me coldly, assigned me to a company, and sent me away immediately. I went to my new captain; the colonel's reception had been severe, the captain's was impertinent. He came from the King's regiment, where he had served as sergeant." Lavalette gives a short account of Dumouriez's defection; of Custine's retreat, of his trial and condemnation; of his successor, Alexander Beauharnais, and of Pichegru.

In the campaign of 1794, Lavalette became attached to General d'Hilliers, and, after the campaign, followed him to Paris, where he became acquainted with General Bonaparte, whom Barras had distinguished at Toulon, and who took a prominent part in the 13th Vendémiaire, when he fired his guns on the national guards.

"The royalists," says Lavalette, "pretended that this insurrection of the Parisians was a generous effort in favor of the Bourbons; I affirm that to be untrue. I was advantageously placed for following the play of passions and intrigues which brought on this unfortunate catastrophe of the 13th Vendémiaire. . . . I found no desire in the multitude, nor among the chiefs, for the return of the Bourbons. The death of the King was detested by all sensible men; but the people loved liberty."

When Barras presented to the Convention the officers who had saved it, General Bonaparte was among them; at the moment when Barras in his speech pronounced his name, those who were about the General tried to make him advance to the front, but he repulsed them with a confusion and an ill-humor which pleased Lavalette. "There was," he says, "in this action less of pride than a delicate sense of propriety; he felt ashamed to be praised for such a victory." It is true that he had not a prodigious esteem for those in whose favor he had fought and who were applauding him. Bonaparte was commander-in-chief of the first military division and of the city of Paris. His first measure was to disarm all the citizens of the capital. It was on this occasion that he became acquainted with the widow of General Alexander Beauharnais (who had been guillotined two days before the fall of Robespierre, on the 7th Thermidor). Bonaparte married her, and, very soon afterwards, was sent to Italy, to command the army. Lavalette arrived in Milan after the battle of Castiglione.

His general, D'Hilliers, was made Governor of Lombardy; but he himself wanted active service, and succeeded in entering the staff of Bonaparte. His comrades were Junot, Marmont, Duroc, Lemarois. He shared in the famous campaign which ended with the conquest of the Austrian possessions in Italy and the recognition of the French Republic by Austria.

Though he was occupied chiefly with military matters, Bonaparte kept an eye on the affairs of France and on the Directory. He sent Lavalette to Paris in order to get exact information. "See everybody," he said to him, "avoid party spirit, find out the truth, and give it to me, divested of all passion." The five members of the Government were Barras, Rewbell, Carnot, La Réveillère, Lépaux, and Barthélemy. The first five had been members of the Convention; the first three had been regicides. Carnot told Lavalette that things could not go on as they were going. "France holds in horror all that recalls the deplorable epoch when the Convention was brought to such cruel extremities; there is an irritation of mind which, if no attention is paid to it, will quickly end in disgust of a republican government. . . . France cannot be governed like a club."

Lavalette saw more of Barras, who was at the time the most violent member of the Directory and a personal enemy of Carnot. He was meditating a *coup d'état* against the faction suspected of royalism. Talleyrand was Minister of Foreign Affairs; he was a cold spectator of the dissensions of the Directory. "All that interested him," says Lavalette, "was the preservation of his office and the rapid reëstablishment of his fortune, which former disorders and events had destroyed." Lavalette saw Mme. de Staël for the first time at his house.

"During the whole dinner, her eulogy of the conqueror of Italy had all the warmth, the disorder and the exaggeration of inspiration. On leaving the table, the company went to a room where was a portrait of the hero; and as I stepped back to let her pass, 'How could I pass,' she said, stopping, 'before an aide-de-camp of Bonaparte?' My confusion was so visible that she became confused herself, and everybody laughed, even the master of the house."

Barras found in Augereau the instrument of the *coup d'état* which bears in history the name of the 18th Fructidor. Lavalette sent a courier to Bonaparte to inform him of it, and, before leaving Paris himself, paid a visit to Augereau. "His head had been turned; he spoke to me somewhat lightly of the general-in-chief, and of the 18th Fructidor with as much enthusiasm as he might have done of the battle of Arcole. 'Do you know,' said he, 'that you deserve to be shot for your conduct? Be quiet, however, and count upon me.'" Lavalette felt that he had better return to Italy without delay.

On his arrival in Milan he at once saw Bonaparte. The General's opinion of the members of the Directory had long been fixed; he did not approve of their harsh action against the representatives who were opposed to them. "Use force when it is necessary; but, when you are the master, justice suffices." The General was at the time preparing his expedition to Egypt; he spent most of his evenings with Monge,

the mathematician, who brought him maps and documents. He knew that the Directory was getting ready to sign a treaty of peace, but the negotiations were delayed, and Bonaparte, in order to hasten them, left for Rastatt, in company with Lavalette, Marmont, Duroc, and Bourrienne. His aide did not linger there during the sittings of the Congress, which had met to settle some difficult diplomatic questions, but went to Paris, where preparations for the Eastern expedition had begun in great secrecy. During his stay in the capital Lavalette was married to a niece of Bonaparte, Émilie Beauharnais; but the marriage had hardly taken place when he had to leave with his general for the East. After the capitulation of Malta, he received a mission to accompany to the Adriatic the grand-master of Malta and his staff; on his return he visited the fortress of Corfu. He arrived before Abukir on the eve of the great disaster to the French fleet, and joined Bonaparte at Cairo. He fought at his side at the battle of the Pyramids, at the battle of Mount Tabor, at the siege of Acre.

Lavalette followed his general when he left Syria in secret, and arrived in Paris with him. France was awaiting Bonaparte, in whom had centred all the expectations and hopes of those who were disgusted with the arbitrary and anarchical government of the Directory. The First Consul, soon after the 18th Brumaire, sent Lavalette to Dresden and to Berlin on diplomatic missions; an armistice was signed with Austria, and Lavelette came back to Paris. He was anxious to take his place again on the staff of the Consul, but Bonaparte's intention was to give him a place in the administration. He was appointed director of the Post-Office. "I entered on this function," he says, "with disgust, but I fulfilled my duty in it for thirteen years, with a devotion and a zeal which did not suffice to make me happy and for which I was cruelly punished in 1815." In his new post, Lavalette was a mere witness of the great events which filled the Imperial period, and has not much to say which does not belong to general history. His memoirs pass rapidly over the campaign of Austerlitz, the campaign of 1809, Napoleon's divorce and marriage with Marie Louise, the birth of the King of Rome; over the rupture between France and Russia, the campaign of 1812, the conspiracy of Mallet, the disasters of the Russian campaign.

On Napoleon's return from Russia, he had frequent conversations with him, and admired his prodigious work in reconstructing the army, in forming and organizing a national guard. His memoirs become more detailed when he approaches the great crisis of 1814 and when he speaks of the intrigues of the Royalists, directed by Talleyrand, of the Council of the Regency, the removal of the Government to Blois, the battle before Paris and the capitulation of the capital, and of the abdication of Napoleon at Fontainebleau. The Hundred Days period, the invasion of 1815, and the second return of the Bourbons bring us to the dramatic part of Lavalette's life, which deserves special mention. The story of his condemnation to capital punishment and of his romantic escape is one of the most famous of the Napoleonic period.

Correspondence.

SUPREME COURT DECISIONS.

To the Editor of The Nation:

Sir: In your strictures upon the decision of the Supreme Court of the United States in the Ju Toy case, your article closes with the significant words: "The decision is unworthy of the Court." In my recollection as a reader of the *Nation* from its first publication until the present time, I do not remember it expressing in so pithy and direct a manner its contempt for a decision of the highest tribunal of the land. You are to be congratulated and encouraged for facing the possible consequences of the severe criticism applied involving contempt. To the lay mind, late decisions of State and United States Supreme Courts, in cases of theft, graft, and criminal process, and again in others tending to vitiate the privileges, rights, and protection of individuals under the existing laws, have left a doubt as to their force or proper justification.

The so-called trained legal mind may respect these opinions with an inherent or acquired sense for technicalities, which is apt to pervert the intent of the law, and consequently the very basis and ends of justice.

Respectfully, Henry M. Mendel.

Milwaukee, May 13, 1905.

NEGLECT OF CANADA.

To the Editor of The Nation:

Sir: Will you allow me to draw your readers' attention and your own to the very scant and shabby treatment Canada has received at the hands of the editors of the 'Historians' History of the World'?

The only Canadian historians from whose works extracts are given, and the only ones mentioned in the bibliographical list, are Bourinot, Bryce, and Roberts. Now I do not wish to disparage in any manner whatever those Canadian writers, but, as you are aware, Messrs. Bryce and Roberts's books are one-volume histories written for the use of schools. As for Sir John Bourinot, his works, while showing wide reading and much industry, do not rank as high as the 'History of Canada' of Kingsford and Garneau, for instance. I may add that the two books of Sir John Bourinot, 'The Story of Canada' and 'Canada under British Rule,' are merely text-books for college and university purposes.

The editors of the 'Historians' History of the World,' you will admit, should have mentioned both Kingsford and Garneau and quoted from their works, which are to-day the standard histories of English and French Canada respectively. Kingsford's work is in ten volumes, and is valuable for its wealth of documents, painstaking research and abundance of detail. Like Garneau's history, it only comes down to 1840. Much praise has been bestowed upon its author, and it is considered to-day one of the standard works on Canadian history. On the other hand, Garneau has always been regarded, ever since he first published his 'Histoire du Canada,' as the "national historian of French Canada." A noted scholar and professor (one of your contributors) has described his work as "the best sketch of New France published by a Canadian during the nineteenth century" (Larned: "Literature of American History").

May we indulge the hope that, in a later edition, justice will be done to a country whose great future so many have predicted and whose glorious past every trustworthy historian has extolled?

Thanking you for your courtesy, I remain, dear sir, yours very truly,

Hector Garneau,
Chief Secretary to the Minister of Inland Revenue.

Ottawa, May 10, 1905.

MELIARÁKES.

To the Editor of The Nation:

Sir: About a week ago the news was received here from Athens of the death of a man who deserves commemoration in your columns, Antónios Meliarákes, one of those many Greeks who are now looking back, wistfully and not in vain, to the ancient glories of their race. He was an historian, able, zealous, and conscientious, and one of those writers of Modern Greek who are endeavoring to reinstate as far as possible the classical idiom. For this reason, none of the many scholars who will find his works valuable need be shy of them on account of ignorance of the Greek language as now spoken. He will be easily intelligible to any classical scholar who will take the trouble to familiarize himself with a few of the modern departures, such as the periphrastic formation of the future tense.

Meliarákes was the author of the fullest and best history of the Empire of Nice (1204-1261), and of the Despotat of Epirus (1204-1469). In addition to these larger works he also wrote geographical accounts of Corinth and Argolis, Andros and Ceos, Amorgus, Cephallenia, and Ithaca, as well as an historical sketch of the Cyclades down to the year 1204. At one time he received a grant from the Greek Government to assist him in his researches, but he soon became the victim of one of those vicissitudes of partisan Government which have so often in our day brought contempt upon parliamentary institutions. The grant was withdrawn under a subsequent ministry, apparently for no other reason than that it had been the gift of a hostile party. In spite of this discouragement he labored on without interruption; and at the end of too short a life—he was, I believe, about sixty years old—left behind him a legacy of rare value to Greek historiography, and regret that he was not spared to accomplish more. H. Edmiston.

Rome, May 4, 1905.

Notes.

An entirely new edition of 'Lippincott's Pronouncing Gazetteer of the World,' under the supervision of Prof. Angelo Heilprin, is expected to be ready for publication in the early autumn.

The illustrated 'History of the Third Pennsylvania Cavalry in the American Civil War,' compiled for that organization's Association by a committee of which Col. William Brooke Rawle was chairman, and printed in Philadelphia by the Franklin Printing Co., will be ready on June 1. The edition,

limited to 1,000 copies, is half open to the general purchaser, who may address John C. Hunterson, Treasurer, 311 Wharton Street, Philadelphia.

The Italian Government in March appointed a committee to superintend the publication of the writings of Leonardo, after the manner of those of Galileo. Professors Blaserna, Beltrami, and Piumati are members of this committee.

The attraction of the Low Countries for foreign tourists is reflected in the fourteenth English edition of Baedeker's 'Belgium and Holland,' including Luxembourg (Scribners). For this busy and densely populated territory the maps are noticeably numerous.

The volume entitled 'Europe and the Far East' in the Cambridge Historical Series (whose scope is from the end of the fifteenth century to the present time) is from the pen of Robert K. Douglas, Keeper of Oriental Printed Books and MSS. at the British Museum, and Professor of Chinese at King's College, London. Published last year, here by Macmillan, amid the clash of arms, it rightly ended with a chapter on the causes of the now year-long war between Russia and Japan. For this and for the antecedent period it will be found handy for reference, and it is more or less documentary; but it is clearly written with British bias and national jealousies and antipathies. Russia's sins are not overlooked; but the respective parts of Germany, Great Britain, France, and Japan herself in the grab game on the Chinese and Korean mainland are recorded without reprobation. The massacre of Chinese at Blagovestchensk is not deliberately misrepresented, but conveys an impression not wholly just to Russia; there is even a sense of contradiction between the narrative of this event on pages 359, 360, and the reference to it on page 415. The folded map is but a poor thing.

Prof. Marshall Ward of Cambridge, England, has set himself about an interesting task. This is no less than the preparation of a series of six books on Forest Botany which shall be readable, abreast of the times, and comprehensive. The plan which he has adopted appears to involve no end of duplication. He starts out with buds and twigs for his first volume, and then takes up leaves. Next he is to consider in succession inflorescences and flowers, fruits and seeds, seedlings, and, lastly, general characters. In the current volume, number two of the series ('Trees: Leaves'—Cambridge University Press; New York: Macmillan), Professor Ward deals in an attractive manner with the anatomy, physiology, and adaptations of the leaves of trees. To show how far he is from following the conventional methods of treatment, we may mention that when he comes to the question of the work of the leaf, he is not satisfied with giving merely the dry details of absorption of gases and of chemical action under the influence of the sun's rays, which are always puzzling to a beginner. He imagines a very minute intelligent being entering the leaf, winding his way through the labyrinth of cells, and recording his impressions of what is going on; finally, this personally conducted "party," if we may say so, emerges from the leaf chock-full of knowledge. We all remember the ingenious device by which a person having only two dimensions, and living in a world called "Flat-land," gets an idea of three dimensions by means of a fold or crumpling of his flat environment. By parity of reasoning, we who live in a world of three dimensions can catch a glimpse of four and more dimensions by some of the odd happenings in our surroundings. Professor Ward has done even better than this. He accompanies his infinitesimal student through a long journey whereon he sees hosts of contradictory things happen, and as a guide he manages to straighten them out. The book is not only an excellent text-book in Forest Botany, but is a capital study in pedagogy as well.

In a convenient handbook entitled 'Experiments with Plants' (Macmillan), Professor Osterhout of the University of California has given us hints for the experimental study of living plants by means of the very simplest apparatus. Professor Ganong, in his 'Teaching Botanist,' has indicated a good many of the simple appliances which serve every purpose in plant physiology. Professor Osterhout goes farther in this direction, and suggests innumerable contrivances which are to be made off-hand in any house, and with which the plant can be severely cross-examined. It is a real pity that the drawings in some cases are so poor, for in these days of photographic processes there is little excuse for such coarseness. The text is, for the greater part, extremely clear and interesting, and needed only rather better illustrations to come into the very first rank of attractive text-books. As it is, it is one of the most helpful laboratory handbooks, and it deserves wide employment in all classes of plant-laboratories. Among the most interesting chapters is one devoted mainly to the striking results obtained by Mr. Burbank of California, the successful plant-breeder, who may be fairly called the Edison of horticulture.

Under the alliterative title of 'Famous Fighters of the Fleet,' and in very attractive shape, the Macmillan Co. present the stories of six British naval engagements, selected in the main with a view to link together a particular "fighter" whom the author, Mr. Edward Fraser, especially admires, the ship that took him into action, and the other vessels which, in their turn, either before or after, have borne the same historic and honored name. The battles, with their attendant circumstances, are accurately and graphically described. To some, the bald figures of size, speed, gun-power, and armor resistance of the modern successors of the grand old men-of-war of the past will be not only instructive but interesting, so ingenious are the author's homely comparisons. Most readers, however, will skim lightly over the statistical feature to lose themselves, boylike, in the smoke of battle, the crash of falling spars and the thunder of opposing cannon. The story of the *Undaunted*, too thrilling not to be universally known, is exceptionally well told, as it deserves to be, for there is nothing finer in all naval history. There is a rhymed account of the *Royal Sovereign* off Belleisle in 1795, where "they did their level best." Other chapters give the duel between the British *Monmouth* and the French *Foudroyant* in 1758, Rodney's defeat of De Grasse in 1782 (happily a year too late to affect American independence), the *Téméraire* at Trafalgar and the *Condor* at Alexandria in 1882. While some other episodes suggest themselves as even more worthy of Mr. Fraser's careful study and agreeable narration, it may not be denied that these are all capital yarns, chock-full of salt, sulphur, and saltpetre.

Mr. David Cumming, author of a 'Handbook of Lithography' (Macmillan), calls it "A Practical Treatise for all who are interested in the process." It is not clear from this, nor from the book itself, whether he has intended an introduction to the subject for the lay reader, or a guide to the professional lithographer. For the former the book has too many practical details, and the author refers constantly to technical processes and mechanical apparatus which no one but a professional lithographer could possibly understand. If the book is intended for him, much of the general explanatory matter seems superfluous. Readers of either class will be hindered by the style, which is neither facile nor clear. The book contains, however, much useful information, and covers the wide field of lithography in considerable detail. To name only the most important of his subjects, the author treats of lithographic stones, inks, and papers; the many possible manipulations of the process, particularly that of "transfers"; lithographic printing and presses; and the colors and processes of chromolithography. Everywhere there is a careful description of the materials and apparatus employed.

A little volume of masterpieces of German prose ('Musterstücke deutscher Prosa zur Stilbildung und zur Belehrung'), edited by Prof. Dr. O. Weise and published in Leipzig by B. G. Teubner, has just reached a second edition and been slightly enlarged. It may be recommended for use in our own secondary schools. Such manuals are rare in Germany, the author tells us. Each piece is succeeded by some bibliographical indications, and by an analysis of the style. The arrangement is broadly historical (in the sequence of events) and miscellaneous. Perhaps one-half the writers quoted from would be unknown to our public, and some have little fame at home; but the great lights from Goethe to Bismarck are fairly represented.

Companionable with the foregoing, but containing an admixture of poetry, is Prof. Othon Guerlac's 'Selections from Standard French Authors' (Ginn & Co.). The arrangement is in two parts, not temporally distinct, and almost all the writers are famous on both sides of the Atlantic. The brief biographical introductions and grammatical notes are judicious, and there is a copious vocabulary.

The question of an artificial separation of a public library's "lumber" from its live stock, as broached by President Eliot some time ago, is illuminated by recent experience of the overcrowded John Crerar Library in Chicago. Three of the librarians united in picking out 20,000 volumes as least likely to be called for, and storing them in the Newberry Library. The Librarian reports that "they have been wanted so many times already as to prove that any such selection is an evil."

A noteworthy addition to the educational institutions of India is the Agricultural College at Pusa, the foundation stone of which has just been laid by Lord Curzon. In his address he said that it was due to the munificence of Mr. Henry Phipps of this city, who gave him $150,000 "to do what you

like with for some public purpose for the good of the Indian people." There are 1,280 acres of land belonging to the college, on which almost any crop can be grown, and there will consequently be provision for instruction in the classroom, research in the laboratory, and experiment in the field. It will be the centre of the application of science to Indian agriculture, and, it is hoped, will eventually lead to the establishment in each province of a properly organized and equipped agricultural department.

The Greenland Biological station which has been planned for a long time, and is to be established on the island of Disko, is now an assured fact. *Petermann's Mitteilungen* announces that Judicial Councillor Holck of Copenhagen has given the 35,000 kronen necessary for the foundation, and the Danish Government has agreed to maintain it.

A new Bibliographical Society has been organized in Florence, which, together with the Istituto delle Carte, which it has established, intends to constitute headquarters for the support of all kinds of learned researches in Italian archives and libraries. In particular, it purposes to offer its services to savants in the collection of bibliographies for their work, in securing material such as copies of archives, photographs, and the like. The head of the society is Prof. Dr. Palmerini of the Florence Museum of Arts.

The Organization Committee of the Fifteenth International Medical Congress, to be held in Lisbon from the 19th to the 26th of April, 1906, has published an official bulletin, giving full details up to date as to the programme and work of the convention. Already 188 papers have been announced, in addition to a number of addresses. All the papers are to be printed before the convention assembles, and must be in the hands of the secretary by the end of next September. The official language is French, but in full convention German and English may also be used. The work is distributed in seventeen sections. The membership fee is $5, to be sent to the General Secretary, Dr. Miguel Bombarda, in Lisbon.

A brilliantly lighted photograph of the late Joseph Jefferson, in easy pose and altogether characteristic, ranks with the best of those we are accustomed to receive from Mr. F. Gutekunst, Philadelphia, as death draws upon his store of portraits of American worthies. The plate is large (14x18), and rich in color with clear blacks.

—After an interval of four years the 'Calendar of Letter-Books preserved among the Archives of the Corporation of the City of London at the Guildhall,' and printed by order of the Corporation under the editorship of Dr. Reginald R. Sharpe, proceeds with Letter-Book D (the so-called "Red Book"), 1309-1314—but there is later matter respecting the election of mayors and sheriffs, and the forms of oaths administered to municipal officers—and Letter-Book E, 1314-1337; that is to say, during the reigns of Edward II. and III. The special interest of D lies in its containing the earliest record of admissions to the freedom of the City by "redemption" and through apprenticeship, a freedom attended with important trade privileges in and out of the City, and with certain immunities from arrest. "Even a bondman fleeing from his master," says Mr. Sharpe, in his interesting introduction, "could not only shake off his bonds if he succeeded in finding refuge within the City's walls undisturbed for a year and a day, but he oftentimes acquired the rights of citizenship." The purchase (redemption) of admission was conditioned on foregoing the wearing of a beard "of more notable prolyxyte or length" than the ordinary—a prejudice which "to a certain extent may be said to have continued [especially in the case of high City officials] down to the middle of the last century." The "courtesy of London" (4 lbs. to the cwt. exacted of the vendor by the purchaser) appears to have been abolished in the period of D. Again, by ordinance of 1311, citizens were assessed in the ward where they lived, and not where their goods and chattels chanced to be; and aldermen likewise in the wards of their family residence, rather than in those they represented. Along with the trade and municipal items in Letter-Book E there is much of a political cast touching the King's interference with City liberties. The indexes point the way to profitable browsing in these annals.

—An essay on the 'Early History of the Law Merchant' (Cambridge [Eng.] University Press; New York: Macmillan), by W. Mitchell, is of much interest for any one at all attentive to legal history and the development of legal theory. Originally, it was the Yorke Prize Essay for 1903, and well deserved preservation; though not a treatise, it presents a systematic treatment of a subject at once little understood and very important, and is the fruit of original research as well as of a careful examination of authorities so unfamiliar that it is safe to say that most lawyers do not know their names. The author's view is that the Law Merchant was in its origin a personal law, the law of a special class, based largely on the usages and customs of the merchant class, and often administered by the merchants themselves. How this law spread with the spread of commerce until, at many points, it superseded the ordinary civil law to which it was originally an exception, is here explained. We all have a rather hazy conception of the process; Mr. Mitchell is fortunate in bringing before the reader vivid illustrations of it. It is in the markets and fairs of the Middle Ages that we find the earliest recognition of the rights of the "*bonâ-fide* purchaser"; it was by the custom of merchants that he was first afforded protection. An English case cited by Mr. Mitchell brings out the conflict between the Common Law and the Law Merchant in a curious way. Down to the end of the seventeenth century the view that the application of the principles of the Law Merchant was a legal privilege to which the merchant alone could lay claim, was maintained by English judges, and it was not until 1692 that the plea that the acceptor of a bill of exchange was *not a merchant* was held a bad defence; the rule that if gentlemen accept bills they must pay them is very modern. The author draws an interesting parallel between the Law Merchant of mediæval times and modern international law.

—'From the Monarchy to the Republic in France,' by Miss Sophia H. MacLehose (Macmillan), is the continuation of 'The Last Days of the French Monarchy,' by the same author. In a volume of rather more than four hundred pages, Miss MacLehose sketches the progress of the revolutionary movement from the period when Loménie de Brienne was still minister until the storming of the Tuileries. Her narrative—and the book is one of narrative rather than of criticism or discussion—has the merit of resting upon a sound knowledge of the chief sources, supplemented by a study of the best monographs. No attempt has been made to follow the course of events in the provinces. The action centres wholly at Versailles and Paris during the days of Mirabeau, Lafayette, and Danton. For the leaders of the Constituent Assembly Miss MacLehose has words of warm sympathy and admiration, though when, in her concluding paragraph, she looks forward from the summer of 1792, she is willing to admit that France could not help accepting the Jacobins in preference to a discredited king. "If she chose wrongly, she paid dearly for her errors, but she issued from the fierce fire of democratic tyranny and of war, maimed and crippled for the moment, it is true, but fitted at length to enjoy the benefits for which Mirabeau and Mounier, Barnave and Lameth, Danton and Vergniaud, each in his own fashion, prepared the way." Most writers on the Revolution take up a strong position in favor of either the Constituent or and Convention. Miss MacLehose stops short on the eve of the Convention, but it is quite clear from the foregoing passage and several others that she is rather eclectic, willing to give each of the great parties credit for having contributed something to the upbuilding of French freedom. Altogether, the book is temperate in tone and well written. We must also commend the good judgment which has been shown in the choice of illustrations.

—A dissertation for the Jena doctorate, by Jacob N. Beam, instructor in German at Princeton University, deals with 'The First German Translations of English Comedies in the Eighteenth Century.' It illustrates the beneficent tyranny of Gottsched, at whose suggestion nine English comedies of the Restoration type were translated between 1748 and 1757. Gottsched's artistic principles forbade him to regard English comedy as worthy of imitation. He set his disciples to translating these, partly to exercise their pens, partly to widen their horizon, and largely as dreadful examples. Dr. Beam does not pretend that these nine translations, which were not made with much accuracy or conspicuous literary felicity, and were soon forgotten, had more than a barely traceable influence upon the indigenous dramatic literature. But it is significant that between 1748 and 1757 five German cities should have contained men who were alive to the importance of introducing English dramatic liberties to the German public. German romanticism is once more shown to be attached, though by a slender filament, to the English mother-plant. Dr. Beam judges from the translators' carefulness to preserve an English flavor, that their deliberate purpose was to acquaint German readers with examples of English manners, and especially with English dramatic procedure. He has collected his material with industry and handled it with reserve, not attempting to make more out of it than the facts warrant. He makes the interesting remark,

however, that the daughter of one of the translators, Michaelis, married August Wilhelm von Schlegel, and helped him translate Shakspere. The originals were Ravenscroft's "Anatomist," Vanbrugh's "Provoked Husband" and "Relapse," Cibber's "Careless Husband," Granville's "She - Gallants," Steele's "Conscious Lovers," Hoadly's "Suspicious Husband," and Congreve's "Love for Love" and "The Way of the World." The thesis is to appear in Litzmann's *Theatergeschichtliche Forschungen*.

—Prof. J. Jastrow, of the Berlin University, was commissioned by the Corporation of the Senior Merchants of Berlin to visit the St. Louis Exposition and to report on economic conditions in the United States. The result of the observations which he made during his three months' journey was published in the 'Berlin Year-book of Commerce and Industry,' and is now reprinted in a pamphlet of 128 pages ('Bericht über eine volkswirtschaftliche Studienreise durch Nordamerika,' Berlin: Georg Reimer). Within the narrow limits at his disposal, Professor Jastrow has managed to treat a great variety of topics under eight separate rubrics, and has treated them with great intelligence. That he should have covered so much ground in so short a time and should have collected so much reliable information, redounds greatly to his credit. In the first section of his report he points out some of the drawbacks in the administrative department of the St. Louis Exposition, and expresses some general veiws on international expositions and on what ought to be their future tendencies. He believes that their continual expansion since 1851 reached its limits at St. Louis, and that henceforth they should be conducted on a smaller and more specialized scale, attaching more importance to serious scientific purposes and relegating trivial amusement to the background. He next takes up the subject of the higher education of business men in this country, which is of especial interest to the audience he addresses, inasmuch as the corporation he represents intends to open a commercial university in Berlin next year. He seems to have formed a somewhat exaggerated estimate of the prevalence of college-bred men in our business community, although he is no doubt right in saying that the liberally educated men in our business world owe their culture not to the special institutions for commercial training, but to their participation in the general courses in our colleges and universities. He makes the surprising statement that in Germany there is no institution for a higher general culture than the German Gymnasium offers, inasmuch as the German universities have, during the past generation, abandoned all functions except those which pertain to a system of professional schools. He seems to imply that the German universities aim merely to train lawyers, doctors and theologians, while an American college turns out educated men. Other subjects treated by Dr. Jastrow are public accountants and auditors, chambers of commerce, American legal literature, etc. In the main his views are just; and where he makes mistakes it is partly due to the short time allowed him for so much work, and partly to the German point of view, which leads him to take some things seriously without making allowance for the element of "fake."

—The most important recent happening on the field of Norwegian literature is the publication of a two-volume collection of 238 letters from Henrik Ibsen, 1849-1900, encompassing more than half a century of literary activity. The extremes of this period are very sparsely represented, while for the central period, the twenty years from 1865 to 1885, we have a running commentary on contemporary happenings and men, as well as on Ibsen's own works, revealing to us the great dramatist in a light entirely different from that obtained by merely reading or seeing his plays. The collection has been edited and provided with an introduction and notes by a Norwegian scientist, Halvdan Koht (to whom has also fallen the task of bringing to completion that great national work, Halvorsen's Dictionary of Norwegian Authors), and a German man of letters, Dr. Elias. The letters are from Ibsen alone, and he himself, in a letter to George Brandes, dated Christiania, December 30, 1898, characterizes this mode of editing letters as very unsatisfactory: "But then I miss *your* letters, which I should very much have wished to have there. For it is never conducive to the understanding of a dialogue only to have the speeches of one person while you have to guess those of the other." Of greatest interest are the letters addressed to Björnstjerne Björnson and to George Brandes. The relations between the two dioscuri of Norwegian literature have always been something of a riddle, and it will be a revelation to many that there has at any time been not only such a close personal relation, but such real intimacy between the two authors, as appears from the following passage in a letter of Ibsen's dated Rome, September 12, 1865: "Thanks also for this [that you have been filled with anxiety on my account]! Taking one thing with another, the utterly great thing, the unqualifiedly *greatest* thing for me and my life career—that I met and really found you—I can never repay except by a devotion which neither my friends nor your enemies shall ever disturb." However, this very letter shows that influences were at work trying to separate the two poets, and not unsuccessfully, as appears in several places in the present correspondence. Thus, in a letter of Ibsen's to his brother-in-law, J. H. Thoresen, dated September, 1872: "People who allow Björnson and Jaabæk to be at large, are fit subjects for the State's prison." But in August, 1882, he again writes to Björnson, on occasion of the twenty-fifth anniversary of his career as an author: "Your works hold the first rank in the history of literature and will always do so. But were I to decide what should be written on your monument, I would choose these words: 'His life was his best poem.' And this, in one's life career to realize one's self, is, I think, the highest that a human being can attain. This task we all have, but most of us bungle it." Of great interest are Ibsen's letters to his publisher, Frederick Hegel, because they reveal him to us from an entirely new side, that of the business man. We see him here as the shrewd investor who discusses the present and prospective value of Government bonds and steamship shares as keenly as any stock operator, and who to a nicety studies the best time for publishing his books. Of love letters there are none, only a previously unpublished poem of January, 1856, addressed to "The Only One," Miss Susanna Thoresen, who afterwards became his wife. A complete translation of the letters will shortly be published by Fox, Duffield & Co.

TWO BOOKS ON CLASSIC ART.

A Grammar of Greek Art. By Percy Gardner, Litt.D. (Handbooks of Archæology and Antiquities.) Macmillan. 1905. Pp. xii., 267.

A Handbook of Greek and Roman Sculpture. By Edmund von Mach, Ph.D. To accompany a Collection of Reproductions of Greek and Roman Sculpture (the University Prints). Boston: Bureau of University Travel. 1905. Pp. xi., 419, lx.

The title of Professor Gardner's book is explained by the author in the first paragraph of the introduction:

"Just as the poetry and prose of the Greeks is expressed in a particular language, the words and grammar of which must be studied by those who would understand the literature, so works of Greek painting and sculpture also are composed in what may be called a particular artistic language. The words of that language are the strokes of the brush and the chisel; but these are put together in order to embody Greek ideas in ways which are distinctive and not like those adopted by any other people; certainly unlike those of modern art. The object of the present work is to set forth, as simply and directly as possible, what these ways are; to define, in fact, the grammar of Greek art, and so render more intelligible the works of painting and sculpture which have come down to us from Hellenic antiquity."

Incidentally, Professor Gardner discusses details of technical execution and of the history of Greek art, but his chief concern is with the principles and relations which are more or less unconsciously observed by the Greek artists, just as grammatical principles are unconsciously observed by those who speak or write their own language. So "the simple laws of relation to material, of relation to space, of balance and proportion" are compared to the accidence of a language, and "the relation of scene to scene, of picture to myth and to literature, of sculpture and coin to history" is compared to syntax.

The discussion of the underlying principles of Greek art can be conducted with profit only by one who is intimately acquainted with the extant remains of that art and also with Greek literature. Moreover, since the basis of grammar, whether linguistic or artistic, is psychological, the author of a grammar of Greek art should be by natural endowment and by training something of a psychologist. All these qualifications are united in the person of Professor Gardner, with the result that in this little book we have for the first time a reasonable and satisfactory (though by no means exhaustive or complete) treatment of the principles that underlie the creations of the Greek architects, sculptors, and painters. Professor Gardner lays great stress upon the idealism of Greek art. It has been maintained that some, at least, of the artists of the great days of Greece were realists, but Professor Gardner is quite right in his contention that this is not the case. The Greek artist was concerned with types, not with individuals, with the permanent and fundamental, not with the occasional and accidental. This does not mean that the Greek artist did not study nature, but that he was not led away into servile

imitation. He made the knowledge gained by the earnest study of nature subordinate to the rules imposed upon him by his own will and the taste of his fellow-citizens and patrons. It was only after the rise of the Macedonian Empire that realism in the modern sense entered into Greek art, and even then it did not become predominant. The discussion of idealism and realism (pages 9-16), not even a summary of which can be given here, is one of the most characteristic and interesting passages in the book before us. It may not be strikingly original, in the sense that the ideas expressed are entirely new, but here one finds set forth with perfect clearness and simplicity ideas which are elsewhere obscured by useless verbiage. In fact, simplicity is one of the most marked characteristics of the style of the whole book.

The chapter on ancient critics of art contains lucid explanations of the terms symmetry, rhythm, ethos, and pathos, as applied to the works and schools of Greek art along with the discussion of the ancient critics' point of view. So, too, in the chapter on dress and drapery, while the historic development is briefly sketched, the Doric and Ionic costumes are carefully explained with the aid of diagrams, and in another chapter the forms of vases are described and illustrated. Such matter-of-fact details afford little opportunity for a display of learning or originality, but they are not omitted, because a knowledge of them is essential for the understanding of the principles that governed the Greek artist in his representation of drapery or his adaptation of his painting to the vase.

The dominant qualities of Greek art are idealism, which leads to the creation and preservation of types; love of symmetry and rhythm, which leads to the orderly arrangement of figures, groups, or architectural members; simplicity of thought, which leads to simplicity of expression; and self-restraint, which causes the artist to seek variety within the limits imposed by tradition, rather than to attempt bold and startling innovations. The greater part of this book is devoted to showing how these principles appear in their application to architecture, sculpture, painting, and vase decoration, and how they affect the relation of art to literature. A final chapter treats of coins in relation to history. The writings of Brunn, Robert, Löwy, and J. Lange have evidently been of much assistance and are often cited, but neither they nor the other writers to whom reference is made have employed their investigations of special subjects for the explanation of the general principles of Greek art.

There is little in these chapters that merits criticism, except in so far as appreciative praise is criticism. The principle underlying the treatment is sound, so that the only questions remaining are whether the best examples have been chosen and whether the examples chosen are skilfully treated. In both respects it seems to us that Professor Gardner has been successful. We might wish that certain things in which we are especially interested had been discussed instead of certain others, but certainly the examples chosen serve their purpose. In a larger and more exhaustive book, which it is to be hoped will some day be written, a greater number of examples could be treated to advantage.

It seems to us that Professor Gardner lays too much stress upon the difference between Doric and Ionic art. He says (p. 78): "The work of the Dorian schools contrasts with that of the Ionians in that its motive was almost entirely athletic and military, while that of the Ionians was more decorative and soft." Are statements like this justified by the facts, or, rather, by our knowledge of the facts? The early "Apollo" figures, which may not be athletic or military, but which certainly are not especially decorative and soft, are by no means all Dorian; the Heracles struggling with Triton, from Assos, is not Dorian; nor is the Athenian pediment group of Athena and the giants. Is it not largely a matter of chance that we possess the warlike pediment groups from Ægina and no similar figures from any Ionic city? The school of Argos, or at least Polycleitus, was especially famous for statues of athletes, and probably succeeded in making better athlete statues than were produced elsewhere; but whether other schools produced fewer such figures we do not know, and certainly Myron's art had no excess of softness. Pythagoras of Rhegium, who was famous for his athletes, can hardly be used as an argument, since he was Ionian by birth and Dorian by education. Is not the theory that Dorian art was radically different from Ionian art based chiefly upon the knowledge that the Spartans were predominantly warlike, and supported by the chance preservation of the pediment groups from Ægina?

The difference between Doric and Ionic art is, however, not a matter which affects the main purpose of Professor Gardner's book, whatever its importance in itself. There are other points also on which disagreement is possible, but they do not affect the value of his Grammar, which should be read by every one interested in the study of Greek art. The beginner will find in it not only a number of essential facts clearly set forth, but also broad, general principles by means of which he can correlate the facts acquired from the study of monuments and from other books. The specialist, on the other hand, though he may find no facts, and perhaps even no theories, with which he is not already acquainted in detail, cannot fail to be interested in this portrayal and discussion of principles.

Dr. von Mach's book is not a 'Handbook' in the ordinary sense of the word, but a descriptive catalogue of five hundred plates and forty-five text illustrations representing works of Greek and Roman sculpture. The subjects for representation are well chosen, for nearly all the most important works are included; and if among the works of secondary importance some are wanting which we are sorry to miss, there are few which we should care to remove from the list of those published. The description and discussion of each work is preceded by a note giving the material, place, and date of discovery when known, museum or other collection in which the work is now preserved, and some bibliographical information. We have not attempted to verify statements of fact, and assume that they are generally correct. We notice, however, that two bronzes, plates 34 and 35, in the National Museum at Athens, are assigned to the Acropolis Museum. Dimensions are not given. The arrangement is generally chronological. A book of this kind possesses one great advantage as compared with the catalogue of a museum, because the author is not confined to the works preserved at any one place, but can select for discussion the works which seem to him most important and interesting. Since the selection is in this case well made, the book, with the accompanying illustrations, is likely to be useful—not to take the place of histories of Greek and Roman sculpture, but to supplement them. It would be more useful, and certainly more attractive, if it were free from certain defects.

In his preface the author says: "In the case of marble statues, most recent books state the kind of marble of which the statues were made, Pentelic, Parian, Carrara, etc., basing their remarks on the investigations of Lepsius. The author has often had occasion to doubt the accuracy of these investigations, and has, therefore, refrained from quoting them." This is in some cases an excess of caution. The small figures identified by Brunn with the gift of Attalus to Athens are made of a coarse-grained, not very perfectly crystallized, marble, which can hardly have been derived from Italian or Attic quarries, and is identical with the marble used at Pergamon. To say that the figures are made of marble gives little information, while the fact that the marble of which they are made is like that used at Pergamon creates a presumption that they were actually made at Pergamon, probably before the (apparently bronze) figures that adorned the Athenian acropolis were sent across the Ægean. If this is correct, the marble figures are not merely in design, but in actual carving, Pergamene work of the time of Attalus. Only in one case does Dr. von Mach lay stress upon the kind of marble used. His argument for the late date of the Medici torso is based mainly upon the statement that it is made of Carrara marble.

In his discussion of the "Farnese Bull" (p. 296), the author states that Pliny (xxxvi. 34) says the group by Apollonius and Tauriscus was made *ex uno lapide*. If it was worth while to quote Pliny in Latin, it was worth while to quote him correctly. His expression is *ex eodem lapide*, and the context makes it possible to understand that what he wished to call attention to was the fact that the rope by which Dirce was to be fastened to the bull was of marble, not, as might have been expected, of bronze. This interpretation is at least as probable as Dr. von Mach's suggestion that Pliny meant that it looked as if the whole group were of one block.

The number of misprints, not all of which seem to be due to the printer's carelessness, is unusual. A few of them may be worth noting. Page 35, for "Kopp" read "Koepp"; pages 5 and 47, for "Kekropes" read "Kerkopes" (though we should prefer Cercopes); page 49, for "devise" read "device"; page 50, line 1, for "48" read "7"; page 51, for "Hippoleta" read "Hippolyta"; page 64, note, for "Tenagra" read "Tanagra"; pages 85, 86, 97, 110, and 117, for "apotygma" read "apoptygma"; page 88, for "credibly" read "creditably" (and even then the sentence is hardly English); page 95, for "Kerynetan" read "Kerynitian"; page 99, note, for "verticle" read "vertical"; page 104, for "paring off argument against argument" read "pairing," etc.

Some of these "misprints" seem to be

due to ignorance of Greek, others to defective English. It is a pity that the manuscript, at least, if not also the proof, was not read by some one whose mother tongue is English. Perfection of style is attained by few writers, and is hardly to be expected in a catalogue written by a foreigner. Certainly Dr. von Mach's style leaves much to be desired. It is charitable to suppose that the impression conveyed throughout the book, that the author considers himself the only real authority on the subject of Greek sculpture, is due rather to his inability to express himself gracefully than to overweening conceit. It is doubtful, however, if the mantle of charity can cover his occasional reflections upon the Boston Museum of Fine Arts, an institution to which he, in common with all students of ancient art in New England (not to say in the United States), is deeply indebted.

Our criticism has been confined mainly to details, as is natural in dealing with a catalogue, and might be greatly extended. For discussion of principles, the author refers constantly to his book, 'Greek Sculpture: Its Spirit and Principles.' Any one familiar with that book will know what to expect in those parts of the present work in which broad questions are discussed. While we cannot recommend Dr. von Mach as a perfectly wise guide to such as wish to know Greek art, we are glad to express our belief that the University Prints, accompanied by his handbook, will be of great service to the student. The value of the catalogue is increased by indexes and a good bibliography.

LETTERS OF A DIPLOMAT'S WIFE.

Italian Letters of a Diplomat's Wife. By Mary King Waddington. Charles Scribner's Sons.

In her first book ('Letters of a Diplomat's Wife') Madame Waddington dealt with subjects of more universal interest than these earlier letters can afford. Her description of the Russian Coronation of 1883 is a vivid account of a great pageant; and the letters from England have to do with persons of whom every one knows and in whom every one is more or less interested. To English-speaking people in general the great Italian names mean less. Yet the Italian letters hold their own. The writer is keenly observant, with a remarkable memory for the details of a scene and a certain instinct for the right descriptive phrase; and in her rapid and off-hand way—strictly the manner of a person writing each day's experiences to members of her own family—she gives a series of entertaining pictures. The social functions which she describes, with many acute comments on the personages of Roman society and on Italian characteristics, are varied by delightful excursions in the environs of the city. She loves the Campagna, and we see it in all weathers and in all lights. There is an entertaining account of a visit to Naples and Capri, some ten years earlier, and one marvels at the memory which, after such a lapse of time, can recall the minute details of scenes and persons.

Scarcely anything in the book is more entertaining than the opening. M. Waddington, who had been Premier for somewhat less than a year, had just resigned. His career as a statesman began in middle life, when he had already attained eminence in the field of archæological research; and he had, as will be remembered, especially distinguished himself, as the Plenipotentiary of France at the Congress of Berlin, by the tact and dignity which he displayed in a difficult situation. It was he who took the initiative in guaranteeing religious liberty in Rumania and the Balkan States, in addition to securing Tunis for France. As Premier, between a democratic Chamber and a conservative Senate, he found the position untenable. His wife writes: "Of course, ever since the opening of the session in November, it was evident that he couldn't stay. He and his ministers were hardly ever agreed on any point, and it wasn't worth while for him to spend his energy and intelligence in trying to carry out a policy which neither the Chamber nor the country apparently desired."

The American wife, while identifying herself with her husband's country, was, by virtue of her foreign birth and education, sufficiently detached to preserve a sense of proportion as well as a sense of humor. "W.," she says, "doesn't like my jokes—thinks they are frivolous." This was apropos of a "friend and compatriot, . . . very dressy and very foolish," whom she met in Florence. "She was glad to see me, was sure I was enjoying the change and rest after my 'full life'; then, 'Did you live in Paris?' I felt like saying, 'No, French Cabinet ministers usually live in Yokohama,' but I desisted from that *plaisanterie* as I was sure she would go away under the impression that W. had been a member of the Japanese Cabinet." One quite sees the poor lady, dressy and foolish.

All the description of the transition from public to private life is most amusing. "L'oncle Alphonse," the next-door neighbor, "*ancient* diplomatist under Louis Philippe," keeps them well informed of what is said on "the other side." "He is quite a royalist, a great friend of the Orleans princes, and a great deal at the club, where they always call him 'l'oncle du gouvernement'—and when the *gouvernement* makes a 'bêtise' (which sometimes happens), they criticise freely, and he tells it all to us. I fancy he always defends W. in public—but, of course, in private pitches into him well."

The change seems to have been a relief on the whole, and the journey to Italy a joy. M. Waddington, who, oddly enough, had never been to Rome before, was as resolutely bent on sightseeing as any tourist—always with an eye to his specialty of coins and inscriptions; but, of course, persons of their consideration were bound to be much in society, and society in Rome, with its sharply drawn line between Black and White, was exceedingly interesting. The Protestant ex-Premier of republican France was much sought after by Blacks as well as by Whites, and, among other experiences, exchanged views with the head of the Roman Church, apparently with pleasure on both sides. The account of the interview is worth quoting, although too long to give entire.

"There were three red and gold armchairs at one end of the room. . . . The Pope [Leo XIII.] sat on the one in the middle, put me on his right and W. on his left. He is a very striking figure; tall, slight, a fine intellectual brow, and wonderfully bright eyes—absolutely unlike Pio Nono, the only Pope I had ever approached. . . . He asked W. all sorts of questions about home politics, and the attitude of the clergy, saying that as a Protestant his opinion would be impartial (he was well up in French politics, and knew that there were three Protestants in W.'s ministry: himself, Léon Say, and Freycinet). W. was rather guarded at first (decidedly 'banal,' I told him afterward), but the Pope looked straight at him with his keen, bright eyes, saying: "Je vous en prie, M. Waddington, parlez sans réserves.' We stayed about three-quarters of an hour, and the talk was most interesting. . . . Evidently he had been curious to see W., and I think he was pleased. It was quite a picture to see the two men—the Pope dressed all in white, sitting very straight in his arm-chair, with his two hands resting on the arms of the chair, his head a little bent forward, and listening attentively to every word that W. said. W. drew his chair a little forward, spoke very quietly, as he always does, and said all he wanted to say with just the same steady look in his blue eyes."

M. Waddington's audience with King Humbert seems to have been less interesting:

"There were long pauses in the conversation—he leaning on his sword, with his hands crossed on the hilt as his father always did. . . . He talked less politics than the Pope; said France and Italy, the two great Latin races, ought to be friends, and deplored the extreme liberty of the press; knew also that W. was in Rome for the first time, and hoped he would have fine weather. He did not ask him anything about his interview with the Pope."

Their visit to Queen Margherita proved more entertaining. Here, as everywhere, she appears to be one of the most engaging of royalties. The conversation was "not at all the banal talk one expects to have with sovereigns—in fact, I quite forgot we were having a royal audience. It was a very pleasant visit to a charming woman, in a pretty room with all sort of beautiful pictures and 'bibelots' about." Later, Madame Waddington writes from Milan: "They certainly love their 'Margherita di Savoia.' There are pictures of her everywhere, and some one told us that all the girls in Monza are called Margherita."

Between Madame Waddington's own memories of Rome in the late sixties (her brother was the last minister sent by the United States to the Pope) and the recollections of the people whom she met, we get glimpses of the city in various periods. Within the memory of one of her friends, Rome under the Pope had been so patriarchal that "there were only two newspapers, each revised at the Vatican, and nothing allowed to appear in either that wasn't authorized by the Papal court; also the Government exercised a paternal right over the *jeunesse dorée*, and when certain fair ladies with yellow hair and elaborate costumes appeared in the Villa Borghese or on the Pincio, exciting great admiration in all the young men of the place (and filling the mammas and wives with horror), it was merely necessary to make a statement to the Vatican. The dangerous stranger was instantly warned that she must cross the frontier." In those days one made the journey along the Riviera once in a lifetime in an old-fashioned travelling carriage, and carried one's own bedding and even one's own family physician. When Madame Waddington went back to Rome in 1904 she went flying over the Campagna in an automobile.

In the second part of the book—"Italy Revisited"—we find, besides the automobile, a new Pope, a new King and Queen (but also Queen Margherita, as well beloved as ever), more audiences, more fêtes, more drives over the Campagna, skies still blue, a world still interesting and amusing, a little deeper sentiment in the remembrance of *tempi passati*, and always the unflagging interest of the lover of nature and of human nature.

The book has its defects. It is true that one would not wish to suppress all irrelevant details any more than one would want one's plum-cake to consist only of a handful of plums; but, when all allowances have been made, there are still passages which might as well have been edited away. Of the detail of dress there is perhaps a trifle too much, unless, indeed, it forms part of a picture, as it always does in the case of a spectacle or of a personage; but that is where dress becomes costume. The mixture of languages, too, is sometimes jarring. In the Russian and English letters the writer was in a French Embassy, and it seemed perfectly natural that she should write as she thought—in a mixture of the two languages, using whichever one happened to come uppermost. But in the Italian environment the effect is less pleasing. In editing the letters (since they were edited by the author), some of the French expressions could have been translated without the slightest loss of force—and of course those are the only ones which can reasonably be objected to. Italian titles should have been given either in Italian or in English. It seems unnatural to put them into French. The typographical errors are noticeable, particularly in the Italian words, although neither English nor French words have escaped. The most striking instance is in the case of Monsignor Bisleti, who always appears as Bicletis. These faults are annoying, but, after all, what we absolutely demand in a book of this kind is that it shall be interesting; and interesting the book is, and full of the atmosphere of Italy.

HONORÉ DE BALZAC.

Honoré de Balzac: His Life and Writings. By Mary F. Sandars. Dodd, Mead & Co. 1905.

Balzac: L'Homme et l'Œuvre. Par André Le Breton. Paris: Armand Colin. 1905.

In Miss Sandars's work is presented, for the first time, an exhaustive account of Balzac's life. There exists no adequate biography of him in French, for the familiar monographs of Biré, Gautier, Gozlan, Mme. Surville, Werdet, etc., are either fragmentary sketches, or impressions of persons indifferent to documentation because of the vividness of immediate recollection; while the advantage of a near view mars the chance of judicial perspective—surely, the only aspect for which our generation can seriously care. Since the publication of Mr. Frederick Wedmore's 'Life' (1890) and Miss Wormeley's 'Memoir' (1892) various new sources of information have appeared. Much of this earlier writing was too uncompromisingly polemical in tone, or aimed at contributing to literary martyrology without so much as a whisper from the *advocatus diaboli*. Miss Sandars has no special pleading to deliver, save perhaps against the Polish lady who ultimately became Mme. de Balzac; incidentally, the biographer bends her energies to showing the discrepancy between the waywardly artistic temperament and the exactions of unreasonable social convention in the demand that even an artist shall fulfil his lawfully made contracts. Balzac is thus made to appear not, it must be admitted, in vigorous colors, still less with the saintly radiance about his brow, but as a Titan struggling under the load placed on him through a combination of circumstance and character.

The story is told simply, directly, with sympathy, and not infrequent humor. Of the general fairness of judgment in this work, there can be no better example than the discussion of Balzac's incessant difficulties over money. Miss Sandars shrewdly recognizes (p. 298) "the puzzling veneer of practicality always observable in Balzac's mad schemes"; an expression which seems to explain at once why his projects seldom failed to attract for a time those who lent an ear to them. One might plausibly go further still, and contend that his supreme gift of penetrating insight into the very heart of practical business, while ignoring the infinitely complex modifications of external circumstance, was in reality but a manifestation of the same genius which created characters so intensely true in fundamentals, and yet so totally improbable when confronted with the actual that we shoulder in our daily pursuits.

When dealing with Balzac's many women friends, Miss Sandars seems to take up an attitude which masculine vanity commonly arrogates to itself as an appanage or monopoly. Her treatment of these delicate relations is singularly free from the bias of sex. As many readers doubtless know, the three women who played the chief decisive parts in the drama of the novelist's life were Mme. de Berny, Mme. de Castries, and the Polish Countess Mme. Hanska—each in her own way furnishing Balzac with "copy," as well as affecting or modifying his views on life and its responsibilities through the subtle and tenacious influence to which the artist is of all men perhaps the most prone to succumb. In the case of the two Frenchwomen, the contrast is sharply drawn between the self-sacrificing and the self-seeking disposition; while in discussing the interesting (yet eventually fatal) relations with the Slavic enchantress, Miss Sandars inclines to the view that the elusive nature which drove Balzac through capricious stages of elation and depression, both cramped his productive power and really shortened his life. It is unfortunate that measures of prudence should have driven him to destroy Mme. Hanska's letters; otherwise we might have gained fuller comprehension of the long passion for a somewhat insubstantial-seeming woman, not infatuated enough readily to forego social position for the sake of lasting alliance with a genius. Miss Sandars examines the long story without the slightest attempt at etherealizing; and instead of assuming, without proof, that Balzac's exuberant letters were subsequently garbled for publication, she shows that the quasi-lyrical exaltation of their tone imposed on the lovers the conventional method of caution in dispatch and delivery.

Although this work purports to examine Balzac's writings, the space given to purely literary criticism is meagre; the result is undecisive, for beyond the conventional use of such terms as "realist" and "pessimist," with a few casual remarks of like nature, the volume is manifestly little concerned with Balzac the writer. In matters of detail the volume is marked by general accuracy; such errors as "La Hague," "Saint-Beuve," "magolias," "Corrinne," "Sainte-Philippe du Roule," "républican," are obviously the result of hasty proof-reading.

No more striking contrast to the above work could be offered than the study in psychology and æsthetics in which M. André Le Breton, professor in the University of Bordeaux, submits his reading of the great man's colossal achievement. Fifty pages suffice the critic for disposing of the man and his life, and add nothing of value in the way of fact or inference. M. Le Breton says (p. 51), "La vie de Balzac explique son œuvre," but this summary fashion of disposing of biographical facts by lumping them into an almost perfunctory essay shows clearly that the critic's real interest is with the work itself. Of this latter treatment one is constrained to speak in far other terms, since it illustrates once again the indisputable aptitude of contemporary French scholars for the systematic and coherent discussion of literature with a view to broad philosophical conclusions. It would be difficult to find any comprehensive study of Balzac more carefully conducted along the lines of modern scientific research, though we cannot profess to chime in with all its results.

M. Le Breton opens with a chapter on the origin of the "roman balzacien," tracing some part at least of its inspiration to the popular novel (often melodramatic in character) to which the facile productivity of such men as Pigault-Lebrun had given an immense vogue in the eighteenth century. This is obviously a working up of the hint thrown out by Sainte-Beuve in his "Portrait" of 1834, where, however, the connection was said to be confined chiefly to the immature works, now very properly forgotten. But M. Le Breton pitilessly pursues the inquiry through the "Comédie Humaine," and shows that the shifts of the sensational method could be relied on by Balzac so late as 1846 in the wildly fantastic death of Valérie Marneffe in 'La Cousine Bette.' The same method of investigation, with a similar result, was recently applied by M. Albert Le Roy in 'L'Aube du Théâtre Romantique,' which sought to prove the dependence of Hugo and the elder Dumas on the stock-in-trade of the boulevard theatres. A concluding note to the chapter (ch. ii.) reaches out tentacular-wise from Balzac to Rabelais, Prévost, Lesage, Molière, Diderot, and Rousseau—all of this making of Balzac, as it were, a parasitical writer. Nevertheless, we can still see a modicum of originality in the author of 'Eugénie Grandet' and 'Le Curé de Tours.' As regards the incompleteness of "La Comédie Humaine" in representing the France of Balzac's time, surely one should remember that its author died at fifty-one years of age, and consequently long before the full maturity of artistic reflection could have enabled him to sift, arrange, coördinate, and thus fulfil.

It is in dealing with Balzac's power of observation (pp. 137-181) that M. Le Breton

seems to us to have best established his own critical capacity. He demonstrates the extraordinary variety of experience that Balzac enjoyed in knowing places and persons, and says most truly, "Balzac est de ceux qui voient vite" (p. 140)—which is, indeed, the only solution acceptable to those who decline to believe that the famous gallery of human types was painted chiefly out of imagination in the quiet of an almost monastic seclusion. That Balzac's imagination ran riot at times (particularly in the exaggeration of cruel or degrading motives determining conduct) readers of 'Le Père Goriot' and 'Illusions Perdues' will hardly deny; and yet, when M. Le Breton takes exception to the frequent recurrence in Balzac's novels of the "conspiracy theme" in the execution of a plot, we do not forget that this apparent obsession finds a good deal of justification in veritable fact. The cormorants hovering about the moribund "Cousin Pons" are near of kin to the foul birds of prey that were foiled of the Tichborne estates. What does Balzac himself say in 'Les Paysans'? "Quand le despotique cousinage bourgeois fait une victime, elle est si bien entortillée et bâillonnée, qu'elle n'ose se plaindre; elle est enveloppée de glu, de cire, comme un colimaçon introduit dans une ruche" (p. 196).

A certain stress is laid on the "vulgarity" of Balzac, a theme to which M. Émile Faguet gave the major part of a lively essay some years ago. According to this conception, 'Le Lys dans la Vallée' breathes out a false sentimentality—apparently because its heroine, while answering to her duties as wife and mother, yearns after a fulness of passion of which her share has been denied. One will grant freely that many details in Balzac's work bear the mark of an almost over-robust animality, the like of which may be found equally well in Shakspere and Goethe; and the resulting crudity of phrase emphasizes details which novelists of a different school agree to shirk. But it is precisely this virility of nature that gives to his work its supreme quality of objective truth. In dealing with Balzac's influence, M. Le Breton seems half inclined to regret this strength, in that Balzac's professed followers too often availed themselves of his example to represent humanity as a congeries of monsters. Yet, to make Balzac responsible for the travesties of his theory of life with which the so-called naturalistic school has shocked the timorous, is about as reasonable as to hold Shakspere accountable for the general goriness and unnamable horrors which the Puritan reaction was fairly justified in arresting.

Our Navy and the Barbary Corsairs. By Gardner W. Allen. Boston: Houghton, Mifflin & Co. 1900.

A hundred years ago, every nation in Christendom paid tribute to the pashas or deys or beys (as they were indifferently called) of the Moorish States along the southern shore of the Mediterranean, obtaining in return an ungracious and more or less respected permission for its merchant shipping to navigate the seas, near and remote, without molestation. The slightest excuse was seized upon by these turbaned ruffians to declare that the other contracting Power had broken the treaty, and to let loose upon its vessels a swarm of pirates that made prizes of them and slaves of their crews, treating the latter with cruel brutality and holding them against exorbitant ransoms. The reader of these lines has doubtless gained his deepest impressions on this subject from the story of The Captive in 'Don Quixote,' wherein Cervantes relates his own painful experiences. That such a state of affairs, extending over three centuries, should have been tolerated longer than necessary to send out an armed force and smoke the hornets out of their nests (as Blake did at Tunis in 1655), is one of the inscrutable mysteries of history, to be explained in a measure, possibly, by the assumption of the equally revolting and mercenary policy on the part of the great maritime nations of subsidizing a disreputable ally to prey upon the commerce of a rival.

American interest in the matter began almost with the founding of the Plymouth colony. It waxed rapidly when the colonies became a nation, and it divided our leading men along the lines of their opinions. Thus, in their day, John Adams favored peace at the price of tribute, while Jefferson preferred war as more honorable and, in the long run, less costly. The former school of thought prevailed for many years, as shown in our disgraceful treaties of those times, which contained such articles as "Redemption and sale of slaves to be arranged by agreement," "The Dey will observe the treaty on consideration of the United States paying annually 21,600 dollars," and "Prisoners of the two parties to be exchanged, and, for balance in favor of Tripoli, United States is to pay 60,000 dollars." The treaty of 1795 with Algiers, by the way, had cost up to January, 1797, nearly a million of dollars. Eventually, Jefferson's ideas forced themselves upon public adoption, and the pact of dishonor gave place to "No tribute, either as biennial presents or under any other form, shall ever be required by Algiers from the United States on any pretext," and "As compensation for American citizens and property detained by the Dey, he shall deliver to consul American property left by the late consul and also pay 10,000 dollars." How the "huge shaggy beast," as Eaton described this particular dey's predecessor, must have torn his beard and rent his garments when compelled to reverse the consecrated Barbary practice of grabbing and never yielding! Between the two treaties quoted lie many years and much history of the most thrilling nature, nowhere so well or so authoritatively told as in Dr. Allen's exceedingly interesting little work.

These corsairs were primarily responsible for the renaissance of the American navy, which had disappeared from mortal view after the Revolution. By their depredations and their inhumanity to their helpless American captives, they finally drove a reluctant Congress to take steps to guard the national honor by creating and employing a national marine. Even the most partial of the navy's friends must have difficulty in condoning the infirmity of purpose and weakness of execution which marked the general scheme of the earlier commodores. Individual deeds of valor abounded, but little continuity of effort was manifested, nothing, in short, comparable with Hawke's and Vincent's blockades of Brest or Collingwood's blockade of Cadiz. Out of the mist of those days of training in their profession certain figures emerge giving promise of greater things in the maturity of their powers. It was in wrestling with the heavy northerly gales on the shore of Tripoli and in hand-to-hand fighting with the Moslem freebooters that Lawrence, David Porter, Hull, Stewart, Charles Morris, Stephen Decatur, and others learned those tricks of the naval trade which were to astound the British a few years later.

Most instructive is it to watch the gradual development of sound notions of tactics and policy, and the abandonment of the half-way measures of Dale and Richard Morris in favor of the sterner method of Preble and John Rodgers. It is, however, only when we read of Decatur's return as commodore to the Mediterranean in 1815 (after the naval war to which he contributed one of its most brilliant achievements, the capture of the *Macedonian* by the *United States*) that we realize how much time and life and treasure had been previously wasted in inconclusive skirmishes and dishonorable conventions with an overrated foe. He reached Gibraltar on June 15, having under him three frigates, two sloops-of-war, three brigs, and two schooners. By the 30th, he and Mr. Shaler, the joint commissioner, had negotiated the first treaty with a Barbary Power in all respects honorable to a Christian state. They would hear of no delay, and refused to grant even the three hours urgently begged for by the Dey's commissioners. "Not a minute. If your squadron appears in sight before the treaty is actually signed by the Dey and the prisoners sent off, ours will capture them." At last the right language was used to these conscienceless brigands, and they were prompt to recognize the change of tone.

Of our course during the eventful years prior to 1816, the author says justly:

"It was hardly to be expected in the early days, with the country exhausted and impoverished by the struggle for independence, that a correct course governing our relation with Barbary should have been laid out and pursued. It was easier and more natural to follow in the footsteps of Europe. A few wise and far-seeing men knew what ought to be done, and urged it; but, as always happens in such cases, the politicians and the people were slow to follow, giving the matter little thought, with an exaggerated idea of the power of the corsairs, and preferring measures which seemed easiest and cheapest at the moment. Time was required to form a healthy, self-respecting public opinion. Meanwhile, the wrong course was entered upon, and led to a succession of later false steps and complications.

"The first treaty with Algiers was on a level with the worst European practice, and its only excuse was the urgency of redeeming the unfortunate captives. It was followed by an awakening sense of national dignity, and each of the later negotiations and treaties marked an advance upon Old-World precedents. Their favorable terms, however, were to a great extent nullified, during the earlier years, by the necessity, imposed by the bad example set in the case of Algiers, of maintaining peace by a system of concessions and gratuities which practically constituted a sort of tribute. But the insolent demands of the Barbary rulers were resisted to a great extent, and war was preferred to servile compliance.

"The barbarians themselves hastened the settlement of the difficulty by their overreaching arrogance, which culminated in the declaration of war by Tripoli and later by Algiers. In each case an opportunity was presented of improving existing conditions by vigorous offensive action; opportunities turned to good advantage by the navy."

We burn with indignation at Bainbridge's having to take his ship, the *George Wash-*

ington, to Constantinople in obedience to the order of the Dey of Algiers, and at the latter's insolent remark, "You pay me tribute, by which you become my slaves. I have, therefore, a right to order you as I may think proper"; we sympathize with the same officer in his unfortunate loss of the *Philadelphia;* we rejoice in Decatur's skill and daring which destroyed her under the guns of Tripoli; we reverence the devotion of Somers and his comrades as they went silently to their awful doom in the ill-fated *Intrepid.*

Dr. Allen's story is really as engrossing as a romance. To epitomize it would detract from the pleasure of the many readers to whom this book is certain to appeal for enlightenment and entertainment. Some unimportant movements of minor vessels might have been advantageously omitted. In a book of this dignity of purpose, the names of ships, following the old custom, ought to have been italicized though in contravention of the practice of the Riverside Press; and the yearly date inserted as a page-heading. The absence of maps of Tunis and Algiers is to be regretted (an excellent contemporaneous French chart of Tunis was available). These are but small defects, however, against which may well be set a complete list of authorities, several valuable appendices, a good index, excellent paper, and clear print. The facts are so moving as to render word-painting unnecessary. The style is simple, as befits the relator of facts and the weigher of authorities. Some of the episodes, such as the burning of the *Philadelphia* and the march to Derne, will be told over and over again (as they deserve to be); but it is safe to say that, for the history of the movement as a whole, Dr. Allen is not likely to have a successor.

Architecture East and West. By R. Phené Spiers. London: B. T. Batsford; New York: Scribners. 1905.

This volume of essays, nine in all and printed in full, is illustrated by a photograph of a medallion portrait, a bas-relief by Lanteri, and by many architectural views and details, some of them photographic, others made up by the author from different sources or drawn from recognized authorities. The essays are followed by a list of other papers, the work of Mr. Spiers, which have been read before the Architectural Association or the Royal Institute of British Architects, and again others published in the *Architect* and other technical journals.

Mr. Spiers is known in London as an expert in architectural teaching. He has had control of the Architectural Association, whose chief purpose is education, and is named in the latest notice of himself as now master of the architectural school of the Royal Academy. He is further known as editor of that edition of Fergusson's 'Architecture' which was published in 1893, although only two volumes of the five were issued under Mr. Spiers's direction; but those are the more important volumes, inasmuch as they embrace the whole subject of classical and mediæval architecture of Europe, down to the Renaissance. During the time which had elapsed since Fergusson's abandonment of the work, information of all sorts had been obtained, and to that extent Fergusson's text was replaced by the newer work of Mr. Spiers himself. In other cases, Fergusson's theories, however far from being approved by scholars generally, however completely rejected by Continental archæologists, were retained because, as the preface expressly stated, no new information had been obtained since Fergusson wrote, and this author had a right to the retention of his own theories in his own book. Footnotes were, indeed, inserted by the editor in such cases, and they were extremely just in tone. For some reason which is hard to explain, Mr. Spiers continues to believe in Fergusson very heartily, in spite of his prodigious assumptions, his daring assertions of what he knew nothing of, his hardy criticism of more modern buildings and suggestions for their improvement. In the present volume he makes constant reference to him. This is especially noticeable in the article on "Mahometan" architecture, the first in the volume, and which is otherwise the most serious and careful study of the growth of the mosque and of the mosque decoration which we can hope to find.

Papers in which reference to Fergusson could not be made, because that writer had never treated the subject at all, are those on Byzantine art in Italy, with St. Mark's and the domed churches in central France. Mr. Spiers made a special study of Byzantine architecture when he undertook the revision of Fergusson as above stated, and Book I., devoted to Byzantine architecture, was almost entirely his own work; but his researches were the necessary completion of his very thorough study of Persian and other western Asiatic building. The long paper on the great mosque at Damascus, reprinted from the *Architectural Review*, is a most curious and important historical study, and in an admirable way rounds off the general essay on the building art of the Moslems.

The Burden of Armaments: A Plea for Retrenchment. By the Cobden Club. London: T. Fisher Unwin. 1905.

The Cobden Club has done well to bring out this volume at a time when there are encouraging signs of a reaction against the rampant jingoism which has been so much in evidence for a decade past. Since 1895 the aggregate expenditure upon the British army and navy has risen from £37,326,000 to £76,367,000, and the end is not yet in sight if the alarmists are allowed to have their way. Fortunately, however, there are indications of returning sanity which will be fostered by every attempt to compute the cost of armaments.

In 1863 Mr. Cobden wrote his well-known work, 'The Three Panics,' in which he exposed the absurdity of the attempts made in 1847, 1852, and 1859 to alarm Englishmen concerning the military situation of their country, and to secure huge increases of expenditures for the national defence. He was able to show, with his customary force and incisiveness, that in all three cases the alleged reason for alarm, viz., the supposed hostility of France, had no foundation in fact; and he could say: "It has been demonstrated in the preceding pages, by evidence drawn from our own official statements, totally irrespective of the French accounts, that, as a nation, we have borne false witness against our neighbor; that, without shadow of proof or justification, we have accused them, repeatedly . . . of meditating an unprovoked attack upon our shores, in violation of every principle of international law, and in contempt of all the obligations of morality and honor." The salient facts narrated by Mr. Cobden are reproduced in the present volume, and make an effective introduction to the history of British military expenditures since 1863.

We are so used at the present day to the spectacle of a large and continuous increase of outlay for fleets and armies that it is well to be reminded that, from 1863 to 1884, the British expenditures remained nearly stationary; and this without any loss of national prestige or any danger to the country. In fact, some of the economies effected by Mr. Cardwell in the War Department and Mr. Childers in the Admiralty were, admittedly, productive of increased efficiency. No substantial changes were made when, in 1874, the Tories came once more into control of the Government, even though the Turco-Russian complications of 1878 and Lord Beaconsfield's "forward policy" in South Africa might have seemed to call for a radical increase of the outlay. Imagine the indignant denials that would be evoked from the twentieth-century jingo by the mere suggestion that a great empire ever could or did get along for twenty years without increasing fourfold its armies and fleets!

But in 1884 an enterprising journalist started an hysterical campaign for a larger navy. By a skilful use of facts which turned out not to be facts, the people were led to believe that the British navy was falling behind the French, and Parliament was induced to authorize a more ambitious programme of ship construction. In 1889, France in the meantime having been stimulated to greater activity, a still larger programme of construction was authorized; and again France was incited to redoubled efforts. Most of the vessels built at this time speedily became antiquated, and the only tangible result was an increase of naval expenditures, and a boom in the shipbuilding industry. Thus was exemplified the truth of the words which Sir Robert Peel uttered in 1841: "What is the advantage of one Power greatly increasing its army and navy? Does it not see that other Powers will follow its example? The consequence of this must be that no increase of relative strength will accrue to any one Power, but there must be a universal consumption of the resources of every country in military preparations."

In 1893, accordingly, a new "programme" was considered necessary, while in 1895 began a series of colossal increases of expenditures which, in less than ten years, raised the annual cost of the navy from £18,000,000 to more than £42,000,000. Moreover, the War Department was finally smitten with a desire to emulate the example of the Admiralty, and the outlay upon the army began to rise. Since 1895 the cost of this arm of the service has advanced from £19,256,000 to £33,598,000. At the present moment, therefore, the estimated aggregate outlay for the national defence is not less than £76,367,000, whereas, in 1895, the empire was considered safe with an annual outlay of £37,326,000. Naturally enough, other countries have been led to enlarge their armaments, so that the alarmists are no better satisfied than before, and are still

shrieking for more—more men, more guns, more ships.

All this story the Cobden Club now sets forth in sober and well-authenticated fashion, that he who runs may read. Not the least serious feature of the situation is that Great Britain has fallen into the habit of borrowing money in time of peace in order to increase its armaments, so that at the present day the danger of extravagance is greater than ever before unless saner counsels can be made to prevail. Then, too, retrenchment will be the more difficult since much of the past outlay has been of a sort to entail automatic increase of future expenditure. Additional sailors, dockyards, and supplies of all kinds will be needed for the ships already under construction; so that, if another régime of economy should be inaugurated, the task of the reformer would be far from easy. In its general outlines, of course, the tale is perfectly familiar, but Americans as well as Englishmen cannot hear it too often. For repeating the lesson, line upon line and precept upon precept, all civilized men have reason to be grateful to the Cobden Club.

The Outlet. By Andy Adams. Illustrated by E. Boyd Smith. Boston: Houghton, Mifflin & Co. 1905. Pp. 371.

To take a big herd of cattle from the southwestern corner of Texas up through the Indian Territory, and so on to Fort Buford, at the mouth of the Yellowstone, in Dakota, and have them there in prime order after six months' travel, is no ordinary feat. This book is an account of such a trip made from March to September, 1884, told with animation, and embellished here and there with bits of cowboy literature in the shape of stories that go the rounds of an evening after the cattle are "bedded" and the men group together to while away a social hour.

Dan Lovell, a train drover, holds a subcontract to deliver ten million pounds of beef on the hoof, *i. e.*, ten thousand cattle, to the Government officer at Fort Buford. He collects the herds in Texas, and he has unscrupulous rivals to deal with, so there is some uncertainty whether his cattle will be accepted. We are taken at once into Dan Lovell's confidence, and, before we know it, we are on his side and are ready to stand to it that no finer cattle than his ever came out of Texas. Once fairly started in this narrative, a reader will be loth to lay it down until he has gone straight through to the end. It is an out-of-door book, with no pretence to style or philosophy—a plain story that takes you right into the herd and its daily happenings. If you feel you are on shipboard while reading 'Two Years before the Mast,' you are fully as conscious of being in the saddle and breathing fresh, invigorating air when you have taken 'The Outlet' in hand. A smattering of Spanish will help the reader; otherwise, it is some time before he understands what a "remuda" is; and he may close the book without any clear apprehension of what it means to "wrangle a remuda." At page 152 a story is entertaining "the boys," and the narrator remarks, "You all know how locoed a bunch of dogies can get." Some of us might not feel at home should we meet the proposition in the course of a civil-service examination. There is more or less of the unconventionality of speech to be found here, but it always seems to be in its proper place. We might speak of it as "the refinement of slang."

When legal proceedings threaten to destroy the chance of "our" cattle being accepted, you are indignant. There was trouble at Ogalalla, and quick work had to be done:

"The lawyer was back within twenty minutes, bringing a draft, covering every item, and urged me to have it accepted by wire. The bank was closed, but I found the cashier in a poker game, and played his hand while he went over to the depot and sent the message" (page 218).

The cattle arrived in the best condition, but the rival party secured the contract. The reader is taken through the scenes of the exciting events at the fort. The immediate prize is lost; but, by great good fortune, everything comes around right by the next spring, for the cattle, having been well wintered, brought a handsome profit to their owner. We are glad to know it, as glad as one is to welcome the happy marriage at the close of a novel.

The story of the hospitable woman of the "sod shack" at Bull Foot Stage—told by John Officer "throwing himself down among us, and using Sponsilier for a pillow and myself for footstool"—and how (when she would take no pay) Bibleback Hunt got even with her at Christmas by "beefing" the "Wyoming stray" and hanging up 800 pounds of beef at her place, couldn't have been told better by Bret Harte himself:

"Old Bibleback was what you might call shy of women, and steered clear of the house until she sent her little boy out and asked us to come in. Well, we sat around in the room, owly-like, and to save my soul from the wrath to come I couldn't think of a word that was proper to say to the little woman, busy getting supper. Bibleback was worse off than I was; he couldn't do anything but look at the pictures on the wall" (p. 153).

The book is admirable of its kind. The illustrations are spirited and cleverly conceived.

Modern Methods of Charity. By Charles Richmond Henderson, assisted by others. Macmillan Co. 1904.

The editor of this bulky compilation describes it as a comparative treatment of the systems of charitable relief in the principal countries having modern methods. To a certain extent, we should judge, it may furnish some basis for comparative treatment. In the case of Germany, the editor is on safe ground. Dr. E. Münsterberg, Director of Poor-Relief in Berlin, has provided material of the greatest value; and it is only necessary to translate and condense what he has written in order to present an intelligible account of the admirable system which the Germans have developed. The chapter on public relief in England, by Mr. Charles A. Ellwood, is also in many respects very satisfactory; superior in execution, indeed, to anything else in the book. Some of the other monographs are not without merit, as furnishing information concerning general laws and particular institutions. The greater part of this information, however, consists of abstracts of reports which are even more indigestible than the originals, and which are almost useless for comparative purposes.

In fact, we regret to say, the editor seems to have a very inadequate conception of the comparative method of study and of scientific methods in general. He announces that

"thoughtful actors in philanthropy are not seeking an atomic mass of isolated facts or personal tricks of benevolent invention, but general laws, rational results of experience and reflection, which, like valuable merchandise, will bear transportation over sea. Gossip is for the idle hour and the winter fireside; science is the common theme of the republic of letters and the fraternity of competent leaders. . . . The comparative method of dealing with isolated phenomena of the same class leads by the most direct path to the discovery of the law, the principles of explanation and the principles of regulation and progress."

After a careful examination of this compendium we cannot report the discovery of any laws not already known, or the establishment of any principles of explanation, regulation, or progress. The results presented may be well described as an "atomic mass" consisting of extracts from essays by benevolent persons of all degrees of competency; of passages culled from public documents of most varied source and merit; of quotations from philosophers, theorists, experts, and sciolists, named and anonymous; of pages of statistics, some valuable, others worthless, meaningless, and unverified; all agglutinated with a compound of such philanthropic sentiments and platitudes as are deemed appropriate in the appeals of charitable societies. Would we learn the effect on pauperism of the compulsory-insurance law of Germany—a most momentous question—we look in vain for information concerning the period since 1890. The success of the English Post-Office Savings Banks, we are told, has been almost unqualified; but we are left to find out for ourselves whether the assets of these banks equal their liabilities, or whether the interest paid depositors is not supplemented by taxation. The Friendly Societies of England have a membership of 11,424,000, and their importance in the life of the English working classes is, we are assured, beyond measure. They are dismissed with one page of generalities.

We have space for but one illustration of the comparative method here employed. Figures are given showing that in 1902 there were in Massachusetts 415,730 dependents, delinquents, and defectives, involving a yearly burden of $14,429,793. (A foot-note states that the actual number of dependents may be considerably less, and is so estimated for other States.) Thus one-seventh of the population is declared to be abnormally dependent on the support of producers; the average charge per family being $23.51. In Connecticut there are nearly 100,000 dependents, or one-ninth of the population; the cost of their support being nearly $28 per family. In New York the number of dependents is said to be 160,000, or about one-thirty-eighth of the population, costing $18 per family. The public expense of maintaining 112,779 dependents in Massachusetts was $5,094,651. To maintain 110,000 dependents in New York cost $16,000,000. The dependents in Pennsylvania number 110,000, about one-forty-seventh of the population, and cost $26,000,000. In Ohio, 169,560 public charges, constituting about one-

twentieth of the population, are maintained at an expense of $5,034,886. The only proper inference to be drawn from such figures as these is that they are worthless for purposes of comparison, if not for every purpose. To offer them as evidence shows an inadequate conception of the requirements of scientific proof, and impairs the value of a treatise which has evidently cost a good deal of labor.

Fishes, Ascidians, etc. Hemichordata, by S. F. Harmer; Ascidians and Amphioxus, by W. A. Herdman; Fishes (Exclusive of the Systematic Account of Teleostei), by T. W. Bridge; Fishes (Systematic Account of Teleostei), by G. A. Boulenger. (Volume VII. of the Cambridge Natural History.) The Macmillan Co. 8vo, pp. xxvii., 760. Illustrated.

There are many, no doubt, to whom the construction of a Natural History Manual appears to be an easy task—that is, one not requiring a great deal of special knowledge. So it might be if, as they suppose, the writer had but to select a predecessor to supersede, and adopt from his information what had stood the test of time, and to modify and rearrange what had been overhauled by the critics, besides gleaning something from later discoverers. There is, of course, much more in the making of a good manual; even in order to deal properly with the earlier matter a compiler must have much of the equipment of a specialist in connection with each of the subjects touched upon. Originality of value insures a longer life to a book, and such originality is hardly to be expected from others than experts. The publishers of this volume were fortunate in procuring several of its sections from specialists whose names are guarantees of excellence, yet the advances in different lines of study have been so rapid that even these portions were somewhat out of date by the time the book reached the binder.

As a whole, the work is good; it ranks higher than any of its forerunners on the same lines in comprehensiveness and in the general quality of its contents. It is sure of a welcome from students and teachers. The length of time in the press, however, is only one of the demerits to be brought up by a critic. The third section, that on "The Fishes (exclusive of the Systematic Account of Teleostei)," is most open to attack; in places it bristles with vexatious little errors, indicating lack of acquaintance with the subject, and shaking one's faith in portions better treated. This section, occupying 401 pages, is larger than all the others, and has a much greater variety of subjects. Many references on its pages show that great use has been made of other works, of manuals that have gone before. Among the grounds for faultfinding are the uses of Calamichthys for Calamoichthys, Janessa (a genus of insects) for Janassa (a fossil fish), Heptanchus for Heptranchias, and Entersphenus for Entosphenus. It may be added here that the use of Amphioxus instead of Branchiostoma in the title of another section is without sufficient justification. In the third section, again, on some pages, as is the common practice of scientists, the subgeneric name is placed in parenthesis between the name of the genus and that of the species; on others, to the confusion of a learner, the same position is occupied by a discarded generic name. Cladoselache (so called) is treated as if it had been definitely separated from the earlier Cladodus, and as if the latter must yet be proved to be distinct from the former, and later, to be entitled to any standing. Elasmobranchs live, we are told, "at different depths in the sea, from the surface to nearly a thousand fathoms"; eight or ten of them have been taken at more than a thousand fathoms, down to nearly sixteen hundred. The distribution given for Centroscyllium is only partial, as may also be said of that of Ginglymostoma. Of the latter: "It is represented by species in the Indian Ocean and the tropical parts of the Atlantic (West Indies and the west coast of Mexico)." The west coast of Mexico is not in the Atlantic, but the shark is common in the eastern tropical Pacific, particularly so off Panama. The distribution of Myxine also is but partial, and the species are said to inhabit the depths to three hundred fathoms; it has been taken at depths greater than seven hundred fathoms. It is said "none of the sharks are small"; the genus Etmopterus contains very small sharks. For the figure named *Sphyrna zygæna*, the legend should be *Sphyrna blochii*. Mitsukurina is said to have very large spiracles; it has very small ones.

The illustrations in this section have not been well handled. Certain figures are credited to authorities whose rights were established only by borrowing without credit from earlier sources; and in a number of such cases, and some others, the reproduction is accompanied by further distortion. The dentition in the figure of the skull of Heptranchias was inaccurately drawn by Gegenbaur; Parker and Haswell did not improve it, and the errors are again copied here. The Greenland shark has its vertebral column figured in the place of the upper caudal fin. In the skull of *Chimæra monstrosa* the frontal holder is shown as if solidly connected with the skull roof; the organ is distinct and has no cartilaginous connection. The same figure omits the subrostral cartilages. The same species is asserted to be the largest of living species of Chimæra; *Chimæra affinis* is much the larger. Of Harriotta there are figures from a specimen mutilated at each end, yet the measurements are given as if from an entire individual. This genus is said to be without a frontal holder in the male sex; like its allies it has a frontal holder.

The bias of this author in regard to theories of origin is indicated in the sentence, "Instances of the loss of pigmentary colors, owing to the cessation of the controlling influence of natural selection, are to be found in the absence of chromatophores on the white under surface of the flat fishes, where such colors are useless but not necessarily harmful, and in the colorless, cave-inhabiting fishes, of which the blind-fish (*Amblyopsis*) of North America may be taken as an example"—a very roundabout and indefinite explanation of what is better described as loss of colors by disuse.

Papers of the British School at Rome. Vol. II.: Sixteenth Century Drawings of Roman Buildings Attributed to Andreas Coner. By T. Ashby, jr. Macmillan. 1904.

The first volume of papers of the British School at Rome won very favorable attention for the young academic foundation to which it owed its origin. The second volume follows worthily in the footsteps of its predecessor. One may perhaps regret that Mr. Ashby has not found it possible to complete in this volume his study of the course and extant remains of the roads that radiated from the ancient capital of the Empire; but the publication in facsimile, with adequate annotation and analysis, of a complete sketchbook of Roman architecture from Renaissance times awakens the liveliest interest, and amply atones for the interruption of the earlier task. The entire volume is taken up with this one paper, which it richly furnishes forth.

Mr. Ashby (following therein Fabriczy) points out that there are three classes, not always mutually exclusive, of Renaissance drawings from the antique. The first is of architects' sketchbooks, who studied ancient buildings as models for their own work. The second is of sketchbooks in which archæological interest is supreme. In the third class are to be put collections of purely artistic sketches, landscapes, and the like. The sketchbook here published belongs to the first class. It now rests in the Soane Museum, London. Sir John Soane bought it at Christie's in 1818, at the sale of Robert Adam's books. Robert's brother, James, probably acquired the drawings during his visit to Rome in 1762, when he purchased from Cardinal Albani for King George III., a collection of drawings that had been the property of Cassiano dal Pozzo. But whether these drawings now published were of the same provenience or not, it is impossible to say. They cover somewhat more than 165 plates in Mr. Ashby's book. The fulness of the collection is therefore one of its striking features. The delicacy and precision of line is yet another, though this is not found equally in all the sheets, since about one-sixth of all the drawings (and these interspersed among the others) are by a less careful hand.

Mr. Ashby, though with much proper hesitation, attributes the finer drawings to a certain Andreas Coner, a cleric from Bamberg, leaving the rest anonymous. This is not a proper place to enter upon minute discussion, or it might be pointed out how slight is the argument for such an attribution. None of the drawings are signed. Much more interesting is the question of the relation of these drawings to a collection of red-chalk drawings attributed to Michelangelo. Mr. Ashby inclines to assign these red-chalk drawings as a whole to some pupil of Michelangelo who had access to Coner's work, and copied some of it unintelligently. Certain also of Coner's drawings, as well as some of those of the other hand, show an apparent relation of dependence upon Giuliano da Sangallo.

Of Coner himself almost nothing is known. The sketchbook contains a *copy* of a letter of his to Bernardo Rucellai (1449-1514), of Florence, author of the treatise 'De Urbe Roma,' and host of the Florentine Accademia Platonica. Coner appears to have died in Rome between October 20 and November 8, 1527. An inventory of his goods, made by his executor on the latter date, in the presence of witnesses, possesses much human interest. Coner apparently lived as a scholar should, cheating his back, and perhaps also his belly, for the

sake of his brain. Apart from books his belongings were of the scantiest. The total list comprises a couple of mattresses, two soiled sheets, two ditto shirts, a single blanket (blanket and one mattress had been bought for him during his last illness), a black cloak, one waistcoat, a single pair of boots, a few drawing and writing implements, and a dagger. Of ready money he appears to have had little or none. His friends had advanced the cost of his food and care, both before and during his final illness. Doubtless his possession of a dagger is not to be explained by supposing that the insecurity of the times had prompted the cleric to emulate the example of the martial Peter, but that the dagger served the peaceful purposes of table-knife and penknife, as well as those of a defensive weapon. Perhaps, however, the manifest poverty of Coner is to be explained by the recent Sack of Rome, in which he, as did innumerable others, may have suffered severely. One of his books is reported in the inventory to have been torn out of its binding, and *conculcatus pedibus Barbarorum* ("trodden under foot of the barbarian"). Another indication of the exigencies of the times is found in the explanation, twice made, that the apparently high charges against Coner's estate for provisions during the last weeks of his life were really moderate in consideration of the hard times and consequently increased cost of commodities.

But in books Coner was comparatively well-to-do. In the custody of a notary were two chests, one iron-bound and locked, the other fastened with a hasp, and both crammed with books. A few others were found in his room at the Apostolic Palace, and one or two had been lent to friends. The number of volumes mounted up to more than a hundred. They included a considerable range of classical authors, both Greek and Latin, some dictionaries, and also a number of later writers—among them, as befitted the collection of a student of architecture, several on mathematics and mensuration. Some of the books were printed, others were in manuscript, and the distinction is not always noted. (The simple title is given of at least one book that was not printed, so far as is known, for twenty years after Coner's death, and a large number of other titles are similarly given without annotation.) As regards, therefore, certain of the more interesting authors, we should be especially glad to know if Coner's copies were really in manuscript, and, if so, whence they came and whither they went. The worthy notary appears to have been more keen about money than about books; for when the chests were opened and he perceived there was nothing in them but books, he went his way, declining to witness the inventory. Coner's funeral expenses were moderate—only two ducats for everything, including the grave. The place of his burial is yet undiscovered.

To return briefly to his drawings: the ground-plans and elevations will interest the student of topography, the detailed and measured sketches of architecture, the student of that art. They convey also some new information. The obelisk of Augustus that formed the gnomon of his great sundial in the Campus Martius was unearthed in 1512; a fine cornice from the Baths of Titus, in 1513; the upper part of the relief showing the façade of the Temple of Venus and Rome (which has been the subject recently of much interesting discussion) cannot have been discovered, as Lanciani thought ('Storia degli Scavi,' ii. 221) as late as 1546, since it certainly formed the basis of one of Coner's drawings.

The Balkan Question: The Present Condition of the Balkans and of European Responsibilities. By Various Writers. Edited by Luigi Villari. E. P. Dutton & Co. 1905.

In his introduction to this timely volume, Mr. Bryce vouches for the competence of the various contributors to deal with the themes assigned to them, and he adds some luminous observations of his own, as to the general aspects of the Eastern Question, which virtually cover the whole ground, so far as the main argument is concerned. The Turkish Empire has for more than a century menaced the peace of Europe, and been a source of special anxiety to Great Britain. There is no hope that its decay can be arrested. Turkey has lost Hungary, Transylvania, Bessarabia, the two Danubian principalities which now form the Rumanian kingdom, Greece, Servia, Bosnia, Bulgaria, Thessaly, Eastern Rumelia, Cyprus, and Crete. In Asia, Russia has encroached upon territory that was formerly Ottoman, and Egypt has slipped away from Turkish grasp. Yet the incurable mutual jealousies of the European States have neutralized all the efforts of the nationalities still within Turkish dominion to shake off their yoke; and, owing to the hopeless corruption of the governing class, in spite of endless schemes of reform and collective notes on the part of the great Powers, not the slightest real improvement in the internal affairs of Turkey has taken place as a result of the European concert. Indeed, Europe was never more powerless than now, for the present Sultan, in Mr. Bryce's opinion,

"is probably the ablest, and certainly the most industrious, who has sat on the throne of Othman for many generations. He is an adept in that characteristically Oriental diplomacy which consists in contriving pretexts for delay and playing upon the jealousies of other States. But the only contribution he has made to the government of his dominions has been the assertion of his Khalifial pretensions, and a stimulation of Muslim fanaticism which has led to the massacre of myriads of Asiatic Christians."

Mr. Bryce is broad-minded enough to consider, in any plan for the solution of the Eastern question, the welfare of the Mussulmans as well as that of the Christians; and, with that end in view, the eventual partitioning of European Turkey between Russia and Austria (with possible concessions to Italy and Greece), and the absorption of Asiatic Turkey by Russian Transcaucasia, appear to him as a promising, though by no means ideal, measure of relief. But, aside from the fact that events in the Far East, since he penned his lines, have disturbed the position of Russia as a decisive factor in Near-East politics, the interests of Great Britain and France, as he well recognizes, militate against the indefinite expansion of the empire of the Czar. Austria's remarkable success in the administration of Bosnia and Herzegovina, though acknowledged by Mr. Bryce, is scarcely alluded to by the other contributors, and evidently does not, in their opinion, constitute a clear title to the rôle of future arbiter of the destinies of Turkey. The situation remains, then, after all the interference of the Powers, essentially as before. "It is the old familiar, half-comic, wholly humiliating one," says Mr. Villari, in his preface; "the Powers are protesting, the Porte is triumphant. The Mürzsteg scheme is not only a failure, but a farce."

It has been the task of Mr. Villari, the author of 'Italian Life in Town and Country,' to collate the opinions of those whom he has invited to give their views of the "Balkan Question"; but, as usual in a collective work of this kind, the total impression is not perfectly clear. There is little enough, in the solution proposed by the various writers, to justify Mr. Bryce's hopefulness that Bulgarians, Serbs, Greeks, and Armenians—possibly even Albanians and Kurds—may eventually develop a capacity for self-government sufficiently strong to withstand Russianizing or Germanizing influences. Moderate in tone as most of the opinions expressed are, they but accentuate the international and racial differences that promote the unrest in the Balkan countries, and, more particularly, the turmoil in Macedonia. It would be idle to expect the conspicuous fair-mindedness characteristic of Mr. Bryce in the special pleadings of the Bulgarian, Dr. Bogirade Tatarcheff, and it is not unnatural to find M. Victor Bérard, the *chroniqueur* of the *Revue de Paris*, insisting that "in every extension of Austrian influence we must see the hands of Germany"; but it is disappointing that English writers so familiar with the East as Mr. Edwin Pears, author of 'The Fall of Constantinople'; Mr. Valentine Chirol, author of ''Twixt Greek and Turk,' and others of equal standing, are unable to agree on a single practical suggestion bearing on the problems of the immediate future. If, according to Mr. Bryce, the fall of the Turkish empire may be delayed for some decades, "conceivably even till near the end of the present century," the question naturally arises, What are the various races to do that must in the meantime remain under the Turkish yoke? Miss Victoria Buxton (Mrs. de Bunsen) is the only contributor who hazards the opinion that, "under European control, and by officials not responsible to the Porte, Turkey can be successfully reformed and successfully administered." Perhaps, even in dealing with Turkish officials, it may be a wise plan not to presuppose, as so many Europeans thrown in contact with them have done, general corruption and contempt for Christians on the part of every Moslem who wields power over them. The examples of Reshid and Fuad Pasha in the past, and of Hassan Fehmi Pasha, the recent humane vali of Salonica, show that, even in diplomacy, it may be well to recognize the existence of the universal touch of nature that we all hope may still make the whole world kin.

There is, in the book before us, considerable repetition, an occasional contradiction, and some diversity, not only as to points of view, but as to such minor matters as the spelling of geographical and proper nouns. Erzeroum and Erzerum, Tirnovo and Trnovo (the map has Tirnova), Komittadji and Komitadji, Goluchowsky and Goluchowski, alternate; while Michailoffsky, Paulowitch, Chazars, etc., show the need of a watchful eye in dealing with transliterations of Russian and Oriental

names by various writers. A more serious mistake is the statement that the application of the dual control, under the Mürzsteg programme, is limited to three (instead of two) years. And the editor ought also to have corrected such a crudity as: "Not long ago there was a typical case occurred in the Kaza of Dibra."

Revolutionary Types. By Ida A. Taylor. London: Duckworth.

We have here a series of biographical sketches for which Mr. Cunninghame Graham has written an introduction, and to which the author herself adds a concluding chapter on the radical spirit in general. Whatever judgment may be passed upon the quality of these essays, there is at least no narrowness in the range of the author's eclecticism. John Pym and Manara, St. Just and Toussaint l'Ouverture, Thomas Harrison and John Mitchel, the Irish agitator, all come within Miss Taylor's view, in addition to George Washington and Benedict Arnold, who are brought side by side through the accident of chronology. Mr. Graham is at some pains to point out that people can attack the existing order without being swayed by the same ideal:

"So many revolutionaries seem to think that liberty is absolute, and that all men see liberty in the same hue. Literally it has a hundred forms and shades, and to force men to certain actions in the name of liberty is as rank tyranny as the worst actions of the worst Russian Czar or Turkish autocrat. No better exposition of the case is to be found than when the preacher by his right divine made Scotland hell, all in the name of liberty and with the cry upon his lips of liberty and of Christ's Headship of the Church. I fear St. Just would have been 'unco ill to live wi',' and so would many of the types the author writes about. Fancy all England ruled by Harrison, with every one forced into Church or Chapel to give praises to the Lord, and to sing hymns to spiritual liberty."

This passage we quote at length because it is a considerable admission for the radical propagandist to make, and because, by virtue of its consonance with historical fact, it shows that the motive of the book is literary and academic rather than evangelical. Miss Taylor is aroused to enthusiasm by the spectacle which a strong and hopeful man presents when he throws away all concern for self-interest or life itself in the pursuit of his chosen cause. "There is a generosity and a faith in breasting the unknown and in stepping forward in the night, that can never be equalled by action based upon a nice calculation of chances; and, to quote a saying of Cromwell's, a man never rises so high as when he knows not whither he is going."

The foregoing extracts will bring out with sufficient clearness the spirit in which the volume is conceived. With regard to the separate essays, it is enough to say that they are sympathetic appreciations rather than essays in erudition or attempts at thick-and-thin justification. For example, Miss Taylor, with all her admiration for John Mitchel's sincerity of purpose, does not close her eyes to the circumstances under which he escapes from Van Diemen's Land. Touching on his breach of parole, she observes: "It is more to the credit of the man and of his cause to admit that the temptation to escape from a captivity to which he had been consigned by means of a trial destitute of so much as a semblance of fair dealing was too strong, and that he had not power to resist it." To chronicle a new note in the criticism of Washington, we append this remark of Mr. Graham's: "With all his virtues, he never appealed to the imaginative mind after his inhuman refusal when a child to tell an almost necessary lie."

The Elements of Railway Economics

By W. M. Acworth, author of "The Railways of England," "The Railways and the Traders," &c. 8vo, cloth, 70c.

"An intelligent man, if he will apply his mind for a few hours to the study of this little book, may have a clearer understanding of the problem of railway rates than is now manifested by most of our public speakers and newspaper editors. Mr. Acworth has explained a difficult problem with such admirable lucidity as to bring it within the popular comprehension, and he would have been censurable had he hid his light under a bushel. While his book may have been intended for his students at the London School of Economics, and while his illustrations and applications are primarily English, the American people stand in especial need of its lessons, and their need has never been so great as it will be during the coming years."—*The Evening Post, May 8, 1905.*

New Books of Permanent Value

ICONOCLASTS: A Book of Dramatists By JAMES HUNEKER

Brilliant critical essays on such revolutionary modern dramatists as IBSEN, HAUPTMANN, SUDERMANN GORKY, SHAW, MAETERLINCK, D'ANNUNZIO, STRINDBERG and HERVIEU.

"This is a valuable book. Its brilliancy as well as its depth of analysis besides the mere bulk of information it contains make it so."—*Literary Digest.*

$1.50 net, postage 13 cents

ITALIAN LETTERS OF A DIPLOMAT'S WIFE By MARY KING WADDINGTON

Delightful letters filled with stories, reminiscences and intimate sketches of famous and interesting people in the royal, papal and social life in Rome.

"Interesting the book is and full of the atmosphere of Italy."—*The Nation.*
"Graceful, easy, animated, full of glimpses of interesting people and delightful places."—*N. Y. Tribune.*

Illustrated. $2.50 net, postage 20 cents

FOLLOWING THE SUN-FLAG By JOHN FOX, Jr.

A Vain Pursuit Through Manchuria

The keen observations and picturesque and entertaining experiences of a trained and skilful writer. The book gives a new and highly interesting view of the Japanese.

"This is a new way of telling the war story, one that puts us out of all conceit with the common tale of the war correspondent."—*Boston Courier.*

$1.25 net, postage 12 cents

A MODERN UTOPIA By H. G. WELLS

A sociological romance giving Mr. Wells's final ideas of the future society. The most brilliantly suggestive and logically imaginative of his writings.

"There has been no work of this importance published for the last thirty years. This astonishing book is a piece of work which embodies imaginative science at its highest."—*London Athenæum.*

A NOVEL OF THE SOCIAL LIFE OF WASHINGTON

Foxcroft Davis's Mrs. Darrell

Second Edition. Cloth, $1.50

"It seems to me to be a man's knowledge and experience and a man's method of narration, but it is a woman's love-story," writes one reader of the book to its publishers.

A NOVEL OF SOCIAL LIFE IN LONDON

Miss Robins' A Dark Lantern

By the author of "The Open Question," etc. *Cloth, $1.50*

"This is a very notable book; it is the best that Miss Robins has produced, which implies that it reaches the highest level of modern fiction. . . . For many years there has been no more sympathetically, yet relentlessly drawn character in fiction than that of Katharine."—*The Daily Mail, London.*

A SIGNIFICANT NOVEL OF AMERICAN LIFE

John Heigh's The House of Cards

By a Sometime Major of U. S. V. *Cloth, $1.50*

The New York Evening Post calls it "uncommonly interesting and human . . . the most successful of the recent attempts to put on paper the personality of the modern business buccaneer. It is rich in literary allusion bearing the hall-mark of experience, keen observation, and wide learning."

READY NEXT WEEK

Jack London's The Game

This is a crisp, direct story full of that characteristic appeal to the primitive passions which marks "The Sea-Wolf," "The Call of the Wild," etc. Illustrated by HENRY HUTT. *Cloth, $1.50*

New Publications Other Than Fiction

A GUIDE TO PLANTS WHEN NOT IN FLOWER By FRUIT AND LEAF

Mrs. Maude Gridley Peterson's How to Know Wild Fruits

By MAUDE GRIDLEY PETERSON, with 80 Illustrations by Mary E. Herbert. A most useful book to those who visit the fields and woods after the passing of the spring flowers. *Cloth, $1.50 net (postage 14c.)*

A NEW VOLUME IN THE CITIZEN'S LIBRARY

Dr. Ross's Foundations of Sociology

Half leather, $1.25 net (postage 11c.)

By EDWARD ALSWORTH ROSS, Ph.D., Professor of Sociology in the University of Nebraska, author of "Social Control."

TWO YEARS IN THE ICE OF THE SOUTH POLE

Antarctica By Dr. NORDENSKJÖLD and Dr. Andersson

With 288 Illustrations and four maps. 608 pp. *Cloth $5.00 net*

A TRANSLATION OF A NOTABLE LAW BOOK

International Civil and Commercial Law

Mr. Arthur H. Kuhn's translation

of Professor Meili's important book is the first work of the kind issued since the important changes of the past four or five years, and to all English jurists becomes at once the standard authority on the subject. Succinct statements of the law of America and England complete the comparative nature of the work. *Cloth, 8vo. $3.00 net (postage 18c.)*

THE MACMILLAN COMPANY, Publishers, 64-66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, JUNE 1, 1905.

The Week.

Not the hideousness of war, the awful suffering and loss of life, the enormous waste of means available for human progress, is, we fear, uppermost in the minds of those who are reading of the great naval battle in the Straits of Korea. And, indeed, there is plenty of other food for moralizing in the virtually complete annihilation of the Russian fleet. Rozhestvensky's hazardous enterprise was, from the beginning, reasonable only so long as Port Arthur remained uncaptured. After that, national pride alone stood in the way of its recall. Defeat on the maritime side of the campaign should have been frankly accepted. The war is essentially a land war, especially for Russia, not a true maritime nation; and the power which retains possession of the land will by and by have its ships, if only for a summer port. Japan's task is incomplete if she does not strip Russia of all access to the Pacific; and, should hostilities continue, we do not doubt that Japan will undertake the reduction of Vladivostok as of Port Arthur. This coign of vantage once seized, she may forbear to exact an "indemnity" which she cannot collect. The full naval lesson of Saturday's engagement cannot be learned from the present meagre details. We can trust the Japanese to report their achievements, but not their losses. We are ignorant to what an extent the fate of the battleships was determined by long-range duelling or by torpedo assaults. In either case, the perfection of ironclads fared no better than the old wooden walls of Trafalgar and Mobile Bay. Nothing is clearer than that the pursuit of this mode of naval supremacy is one of the costliest follies in which nations can indulge. The gun, the mine, and the torpedo have doomed the ideal battleships of to-day; the dirigible balloon will soon round out the demonstration. This moral, however, will pass unheeded at Washington. On the question of strategy, those who blame Rozhestvensky may ask themselves what "world power" now envies him his opportunity for lost glory.

"Ohio Standing Pat" is an appropriate headline for the Ohio platform. On most vital topics the so-called declaration of principles is as non-committal as Vice-President Fairbanks himself. Every stump speaker in the campaign will find it easy to run with the hare and hunt with the hounds. This bit on railway legislation, for example, ought to be equally pleasing to the labor unions, the railway managers, the farmers, and the Standard Oil Company:

> "We also endorse every effort for the active enforcement of existing laws to stop all unjust discriminations and special favors in the form of railway rebates, or by any other device, and we favor such further legislation on the subject, with adequate penalties, as may, after full investigation, seem to the Republican Congress and Administration wise and conservative, yet adequate to prevent unfair advantage to any, and to promote and insure the rights of all individuals, interests, and localities."

We refuse to believe that Secretary Taft is the author of this masterly effort to be all things to all men. On the tariff we have this delightful deliverance:

> "We stand by the principles of protection to American labor and American industries. . . . No step should be taken that may imperil or threaten our good times. All are consumers or producers, and must stand or fall together."

If this means anything, it means that Ohio Republicans accept as their spokesman Representative Charles H. Grosvenor, who is the very embodiment of bourbonism on the tariff. This platform is also another sign that President Roosevelt, if he urge tariff reform, must encounter the strongest kind of opposition within his own organization.

Secretary Taft's speech at the convention was in most respects an orthodox defence of the Administration. In general, Republicans are great and good, Democrats weak and wicked; Republicans propose wise and statesmanlike measures, Democrats oppose with folly and trickery. In particular, the railway rate bill is moderate in its provisions; and if Republicans do not redress grievances by rallying in support of it, the naughty William J. Bryan may lead a formidable movement for Government ownership. "The gobble-uns will git you if you don't watch out." The Monroe Doctrine, interpreted by Theodore Roosevelt, is—as it was in the beginning, is now, and ever shall be—the great bulwark of the Republic. The man who lays his hand upon it, save in the way of kindness, is a wretch whom 'twere gross flattery to name a coward. The big stick is none too big, and the gentleman who carries it exercises "a degree of forbearance that the confidence of strength and a righteous purpose justify." He might, if he chose, be fierce as ten furies, terrible as hell; but really he isn't. When Secretary Taft came to the tariff on products from the Philippines, he dropped the smooth language of congratulation and laudation, denounced the high tariff wall between us and the islands, and asked that justice be done them. On the main tariff question, however, he was singularly non-committal. In order to make Government income meet the outlay, there must, he asserted, be either additional internal taxes or a revision of the tariff—"with every effort to cause the minimum of business disturbance." Which alternative he and the President favor, he did not reveal. This reticence falls in with the news from Washington that, after all, the President is lukewarm on the subject of tariff reform, and regards the railway-rate problem as far more pressing.

On the matter of tariff revision the Washington correspondent of the *Tribune* has written a letter so remarkable in its implications that we marvel at the temerity of the Republican organ which prints it. "From an entirely new and unexpected source," says the *Tribune*, the President is assured of hearty support in scaling certain tariff schedules. The "ablest managers" of certain protected industries are now clamoring for reform. The reason is not, as one might suppose, that they want a small cut by the "friends of protection" in order to ward off a heavy slash by the enemies. That kind of life-preserver is not what they are looking for. No, they think that protection under the Dingley act is in some cases so high "as to induce inordinate competition." The result is that "large concerns, whose business is menaced by the continual organization of small competitors, are compelled to absorb the little fellows at extravagant valuations." That is, the tariff is so high as to defeat its real purpose. The true aim is to enable the "large concerns" to control the business; and when they find their supremacy threatened, they must juggle the schedules so as to crush their rivals. Otherwise, they are actually forced to "absorb the little fellows at an extravagant valuation." To subject the managers of a monopoly to such an inconvenience is an outrage. By all means allow them to write the law to suit themselves.

The decision handed down on Monday by the Supreme Court in the franchise tax cases will be greeted, and rightly, with profound popular approval. That it is good law the somewhat unusual spectacle of a unanimous bench will attest. That it is good policy, both from the standpoint of the public and ultimately from the standpoint of the public-service corporations, will become increasingly manifest. No more thorough vindication could be asked of the State's right to exact a just compensation from corporations which use a large portion of the public highways. Nor would these corporations have found their ultimate advantage in persistently dodging their fair contribution to the public treasury. The way in which for a long time they succeeded was peculiar. It was through an untoward accidental result of

the decision of the Court of Appeals in the cases of the Union Trust Company and the Manhattan Railway. The outcome of this decision was that special franchises could not be assessed and taxed as personal estate. The simple remedy for this grave injustice was proposed by Senator John Ford in 1899 in a measure which classed special franchises as real estate. The law as originally passed was amended at a special session of the Legislature, which was called by Mr. Roosevelt, then Governor, on May 22, 1899. The amended act provided for the assessment of "the value of all franchises, rights, or permission to construct, maintain, or operate" surface, underground, and elevated railroads, or similar industries involving the use of the public highways, by a State board of tax commissioners. The main contention of the corporations before the Supreme Court was, that they already paid either a lump sum or an annual amount for their franchises, and that to impose in addition an annual tax was forcibly to augment the price at which they had contracted for these franchises. This allegation the Supreme Court would not allow. Despite the fact that the name "tax" had sometimes been loosely applied to the payments previously made by the corporations, the Court held that these payments were essentially a purchase price paid for valuable property, and that the payment of the purchase price outright or in instalments no more exempted the companies from the taxing power of the State than the purchase of land from the State in fee simple would exempt the owner from future taxation.

The Chicago express companies will have the support of public opinion in their refusal to take back the striking teamsters. These employees had no grievance; they were satisfied with their wages. They went out because they were required to make deliveries to houses which the Teamsters' Union had boycotted. This is the sympathetic strike in one of its most senseless and outrageous forms—futile and unprincipled. The sympathy of the public will be still further alienated by the fresh disclosures regarding the slugging committees in the pay of the union. Four of these hired thugs were arrested on Sunday; and three of them finally confessed that they had attempted to assault employees of Wells-Fargo. From these facts it is easy enough to see why the strikers are afraid of the militia. They want liberty to maim and kill the men who have taken the places they themselves deserted. Their trust is in violence.

To have a Mayor in the City Hall who will stand squarely for the interests of the people against the predatory politicians, is a novel experience for Philadelphia; and it must be confessed that Weaver's first two years in office gave small reason for hope that he would be the champion so sorely needed. But, having placed himself at the head of the embattled citizens, he has brought the machine to its knees, and forced the withdrawal of the swindling gas proposal. Under the rule of Israel Durham, Philadelphia has been about what Dr. Parkhurst has just called it, "the rottenest city in the United States." Long years of public lethargy have perhaps served a useful purpose in making the predatory gangs bolder and more shameless than in any other of our great cities, and hence easier to expose. It may be doubted if anywhere else at this time there could have been put forward with prospects of success such a proposal as that of the United Gas Improvement Company. It was open to no defence, however specious; any one with a pencil and paper could figure for himself in ten minutes what it would cost the city. And it appears that in the still larger issues on which the City party proposes to begin its fight, the facts are equally clear and unmistakable. If this gas lease is merely of a piece with the projected exploitation of the filtration plant, the electric-light merger, and the traction franchises which Ashbridge signed away gratis in the face of a $2,500,000 offer for the same rights, the opponents of the political-business machine will at least have no lack of arguments. Tactically, too, they will be in an unusually strong position. Under the terms of the existing agreement the city can resume control of the gas works if it chooses in 1908, and it is contended that the city never relinquished the right to take over private street-car lines at any time by eminent domain. Again, by a prompt response of the voters, there is a chance of defeating the "ripper" bill before it takes effect.

Gov. Douglas has courageously followed Gov. Bates's lead in vetoing a veterans' gratuity bill, just passed by the Legislature of Massachusetts. On being resubmitted, it failed to pass over his veto, and seems to be dead. This act, like its predecessor, sought to impose upon the State the obligation to pay to every veteran of the civil war, not a conscript or substitute or in receipt of a bounty, who served blamelessly for Massachusetts, the sum of $125. The bill carried an appropriation of $350,000 to meet the obligations it imposed. The Governor in his veto message declares that legislation of this character is unconstitutional, and backs his declaration by citing the decision of the Supreme Court of Massachusetts last September, which held that the expenditure of money proposed in such an act was for a private and not a public use, and therefore not in conformity with the Constitution of the Commonwealth. In addition, Gov. Douglas points out that the amount appropriated to pay these gratuities is entirely inadequate, and insists that the legislation was not passed in good faith. In commenting upon this blocking of the old scheme by the Governor, the Boston *Transcript* says that he is right in supposing the $350,000 to be insufficient, and cites the experience of the Bounty Commission a few years ago: "When that commission was created, its legislative promoters said that it might have 150 claims to consider. They actually passed on several thousand." The Governor of Massachusetts is showing himself to be a man of true independence and courage, as backers of "strike" legislation are finding out, and his determination not to be a candidate for reëlection next fall will be generally regretted.

A somewhat important question in banking supervision arises in connection with the Merchants' Trust insolvency. Last week's statement by the Superintendent of Banking admitted that on examination two years ago he found the company practically insolvent. With a capital of $500,000, surplus of $1,000,000, and deposit liabilities of four to five millions, the company "had loaned upon and purchased securities to the amount of $4,000,000, which had no ready market value," besides guaranteeing other extensive and equally unmarketable loans. But Mr. Kilburn was convinced, he says, "that to put the trust company in the hands of a receiver at that time would necessarily result in throwing these securites on the market, and in an enormous loss to the trust company." This is doubtless true. To force a receivership in a panicky market, if the insolvency can be deferred, is manifestly unwise. The practice has often been, even when actual money advances from other institutions were involved, to "carry" such an institution over the panic period, and give it a fair chance to market its securities. But to permit an institution thus situated to go on with its business for two full years, receiving deposits from unsuspecting customers as if its solvency were unquestioned, raises a rather different issue. It is to the public that the Banking Department owes its first duty, and to prevent insolvent institutions from receiving the money of unwary depositors is certainly not the least of its obligations. The Merchants' Trust Company was not an important institution, and its troubles have produced no great effect on the financial situation. This hardly absolves the Banking Department from criticism, however; for small institutions may the more confidently be dealt with, so far as regards the consequences of announced insolvency, while, on the other hand, it is depositors in such small banks or trust

companies who stand most in need of protection by the State.

The victory of *Atlantic* in the ocean yacht race is doubly welcome because it proves the speediness and handiness of that peculiarly American rig, the three-masted schooner. *Atlantic* is, we believe, practically the first attempt to produce a racing type from the three-masters, which have proved their value as cargo-carriers. Her success should have an appreciable influence upon the rig of sailing yachts of large tonnage. As for general lessons as to design, it is unlikely that the race will furnish any of a conclusive sort. The contestants represent so many types of hull and such varying size and rig, that one will hardly be able to apportion their relative credits to designer, rigger, and skipper. In fact, the interest of the race happily lies in untechnical matters. Everybody can enjoy the romance of a three-thousand-mile contest, with wind and wave primarily—for the contestants were rarely in sight of each other—and everybody can appreciate the stimulus that the ocean race will give to real yachting as distinguished from racing. Finally, the race is memorable if only because it marks a gracious overture from the Kaiser to American sportsmen.

The continuance of the deadlock in Hungary has had an unexpectedly sobering effect on the Austrian Reichsrat. The obstructionists have for the present desisted from their mob tactics, and for the first time in years the Lower House has seen a dignified and businesslike discussion of tariff matters. This apparent truce between Germans and Czechs, Feudalists and Liberals, Christian Socialists and Social Democrats, is the result of a tacit agreement to await developments in Hungary before deciding on a definite line of action. Each party hopes to profit by a weakening in the position of Francis Kossuth and his fellow-Independents; and Baron Gautsch, the new Austrian Premier, is taking advantage of the momentary era of good feeling to reorganize his Cabinet by parcelling out the portfolios, hitherto held by colorless officials, among recognized party leaders. All shades of political opinion are to be represented in his Ministry, with the probable exception of the Christian Socialists, if one may judge by the retirement of Herr von Wittek, the Minister of Railroads, who had the support of that party. It cannot be said that such a coalition Ministry is likely to command a safe working majority in the House. Baron Gautsch's previous experience as Premier, in 1897-98, has endeared him neither to the Germans nor to the Czechs, and no Parliamentary Ministry in Austria has ever had the confidence of Parliament. Nor is the outward peace between Germans and Czechs likely to continue, for the recent decision of the Vienna Imperial Court, reaffirming the legality of the Czech language in the German-speaking districts of Bohemia, has already stirred the German deputies from that province in the Reichsrat to angry protest.

The *Novoe Vremya*, in its issue of May 10, explains the functions of the new institution, "Zemsky Soviet," which was sanctioned by the Czar on May 20. The "Zemsky Soviet" constitutes the Lower House, and the Imperial Council, which is not interfered with by the Bouligin Commission, will continue as the Upper House. The members of the Zemsky Soviet will be chosen by the people. Its chairman will be appointed by his Imperial Majesty from the members. Beside the representatives of the people there will also be non-elective members, such as the ministers and chiefs of separate departments, or their authorized representatives. Their presence in the Soviet is necessary to elucidate the questions under consideration. The Soviet will have from 500 to 550 members, whose personal safety will be assured, so that all the political groups may take part in the sittings. The members are not to be paid, but living expenses to the amount of 15 rubles a day will be allowed. The members are chosen for a term of three years, and the sessions will last from the middle of November to the middle of January. The Zemsky Soviet, as the highest institution of the State, will have the right not only to consider projects for legislation introduced by the different ministries, but also to submit its own projects and to employ for that purpose separate committees from among its members, to discuss the revenue and expenditure of the Empire, the propositions of the Minister of Finance, and the budget of the Empire.

The Zemsky Soviet will also be privileged to question the ministers, who are, however, responsible only to the Emperor. Its members can also question the different ministries about policies, but not about individuals—a saving clause for the bureaucrats and the grand-ducal cabal. The Emperor may close the Zemsky Soviet whenever he wishes and order new elections. The projects which have been favorably passed on by the Zemsky Soviet have to be passed also in the Imperial Council to become valid. In the case of disagreement, the Emperor decides the question. The chief and most difficult problem is how the election of representatives should be conducted. Pending a final decision, it is considered best to employ the system now in force in municipal and zemstvo elections. The idea of universal suffrage was not feasible, as the masses are not deemed ripe for it, and, besides, it would be impossible to institute successfully such elections in certain border districts. It was also found inexpedient to hold the elections by manhood suffrage, as in this case the peasants would have the majority of representatives. Because of this, and because it is felt that all the estates should be duly represented somewhat in the order of their wealth and intelligence, the same system of election was adopted as the one heretofore employed at the municipal and zemstvo elections; and as the zemstvos are not established everywhere, it was decided to establish the above institutions before the election for the Zemsky Soviet. Already the preliminary steps to this end have been taken in Siberia, Poland, and the Baltic provinces. In Finland the elections will be conducted at present as those for the Diet.

The negotiations looking to a revision of the diplomatic service of Norway and Sweden have come to an *impasse* through the King's veto of the bill providing for separate Norwegian consuls. This action was a double rebuke to the movers of the act, for King Oscar terminated a temporary regency, due to ill health, in order that he might veto the bill in person. Immediately after this action, the Norwegian Ministry resigned, and for the moment the negotiations are arrested so far as Norway is concerned. While the general features of the dispute between the federated kingdoms are familiar, through the letters of Nansen and Bjornson on the Norwegian side, and of Sven Hedin on the Swedish, it will be well to distinguish the real cause of the controversy from its accidental expressions. From this point of view the campaign for a separate consular service for Norway is merely the readiest means of protesting against the preponderance of Sweden under the act of union. It chafes a Norwegian not to see his own flag flying over consulates abroad, and to feel that before other nations Norway has no standing except as represented by the wealthier partner, Sweden. Moreover, the commercial policy of Sweden differs from that of Norway. Sweden, with a protective tariff, has no desire to invite imports; Norway, as a free-trade nation deeply interested in shipping, is committed to quite the reverse policy. Thus a consular personnel chosen by Sweden is unacceptable to Norway, on both sentimental and practical grounds; and the fight has been made on this issue, because it combined an immediate desideratum with a general disclaimer of Sweden's diplomatic supremacy in the union. So the Norwegians have demanded nothing less than a separate consular service under a Norwegian Foreign Ministry, a pretension which is tantamount to the abrogation of the act of union.

THE CUSTOMS ADMINISTRATION.

In England, customs duties originated as insurance premiums paid to the crown by foreign traders. In those days the alien merchant was not protected by the law of the land. He bought this personal security at a price from the King, and was thus exempt from violence while hawking his wares through the realm. Customs duties to-day resemble less an insurance premium than a penal fine. The importer of foreign merchandise is regarded by the customs officials as a traitor in disguise. The universal presumption of innocence of our common law can hardly be said to extend to him. He is regarded in some wise as no better than an adroit smuggler. The pawnbroker and the usurer are his brothers, and, if his business is not forbidden outright, it is still correct to say that "all the sanguinary laws of the customs" are directed against him.

It is doubtless true that there are many unscrupulous importers who, by undervaluations or otherwise, are ready to evade the duties lawfully due. With tariff rates as high as they are under the Dingley act, the premium on dishonesty is so great as to call into being a supply of just such dishonest importers. Jim Fiske's characterization of his father—"The old man wouldn't tell a lie for ninepence, but would tell eight of 'em for a dollar"—rested on keen insight into the weakness of some natures. It is not true that every man has his price, but it is true that the greater the law-created inducements to crime, the larger the number who will run the risk of the penitentiary. Fortunately, there is a much larger body of honest and upright importers. That these men should be subject to the pains and disabilities of the suspect is indeed hard, but it is nevertheless the case at present. Behind the relatively small body of importers stands the vast army of consumers. For the consumer's sake, if not for that of his advance agent, the importer, it might be supposed that the friction of importation, when once the legitimate duties were paid, would be reduced to a minimum.

On the contrary, the Treasury, in its administration of this office, impedes and obstructs the smooth working of importation. It goes far beyond the mere principle that the Government should be given the initial advantage in an actual case of doubt. It glowers with a hawk's eye at each bit of merchandise, always clapping on the maximum duty that the most casuistical interpretation of the law can be tortured into warranting. It creates petty annoyances. Its rulings and classifications are capricious, inconsistent, and non-uniform. Egged on by spies of particular protected industries and by fanatical idolaters of Dingleyism, the present Secretary of the Treasury usurps the powers of Congress, and, under pretence of delay and re-investigation of cases finally adjudicated in Federal courts of last resort, may even ruin the business of some industries on which he does not smile.

These charges are not made at random. Almost every importer could bear personal testimony to some one of the above counts. A few illustrative instances may be cited. Felt-covered piano hammers for a time were entered, and paid duty, as parts of musical instruments. Then some argus-eyed friend of domestic industry discovered that manufactures of felt were taxable at a higher rate, whereupon piano hammers were thereafter taxed as manufactures of felt. Another example of the purposive irritation fomented by the customs officials concerns baggage. Baggage consisting of clothing and personal belongings originally purchased by our own citizens in this country is sometimes delayed, and crosses the Canadian border, or even the Atlantic, a few hours or days behind the owner. The myrmidons of the customs have frequently made the attempt to collect duties on such belated baggage—in one case upon a watch left behind at a Canadian hotel by an American tourist; in another upon laundry work received too late from a London laundry to be personally brought in by the owner.

Irritating and exasperating as are these practices, they quite fade into insignificance in comparison with the greater vices of customs administration. These are inconsistent rulings, and what at its worst is nothing short of usurpation and tyranny. A good illustration of the former is furnished by the recent question of duties on scientific apparatus. On April 10 last, Prof. W. T. Councilman of the Harvard Medical School protested to Secretary Shaw against the payment of duty on a microscope held in the Boston custom-house. The instrument had paid duty on its original importation, and had been sent abroad for repairs that could be made only in Europe. The reply of the Treasury was that the law and rulings of the Department required the exaction of duty upon every subsequent re-importation of such appliances. Last week Secretary Shaw made public a ruling whereby astronomical apparatus to be taken abroad for observations should be exempt from duty on re-importation. That this latter decision is in the line of enlightened good sense is freely granted, but its legality is open to the gravest question. Moreover, such overturning of precedent makes uncertainty the only certain thing predictable of such rulings.

The gravest of recent customs misdemeanors, however, concerns the importation of steel strips manufactured into car springs by certain competitors of the Steel Trust. The regular rate of duty would be about 35 per cent. ad valorem. The suggestion having been made—it is alleged by the emissaries of the Trust—that the strips had undergone a process of finishing that would subject them to an additional duty of one cent a pound, the higher rate was immediately imposed. The importers, beginning in October, 1902, fought the decision before the General Appraisers, the Circuit Court, and, finally, the Circuit Court of Appeals. The last tribunal, *in re* U. S. versus the Crucible Steel Company, gave, on March 3, 1905, a unanimous decision in favor of the plaintiff's contentions. The Secretary of the Treasury thereupon, instead of refunding the illegally exacted duties and collecting the lower rate, coolly informed the plaintiff that, "in view of the incomplete record as to the commercial interpretation of the term 'steel cold rolled, smoothed only,'" it will be advisable to prepare "another case for trial." The outraged attorney for the importer levels this indictment at Secretary Shaw: "You have nullified the decision of the courts. This action of yours in this case is a serious menace to our Constitutional Government. It exhibits not only a disposition, but an ability, to disregard the law utterly, and to change it and administer it to suit your personal prejudices and political interests." This is undoubtedly contempt of Cabinet, but it seems fully warranted by the facts.

THE SEQUEL TO A RAILWAY QUARREL.

Announcement appears to have been made in Wall Street, in a more or less informal way, that the principals in the transcontinental railway dispute have "come together" and agreed not to fight one another with the weapons familiar in old-time railway contests—namely, invasion of one another's territory and traffic. Exactly how much or how little such an announcement means may best be understood by reviewing the extraordinary Northern Pacific contest, from its inception, early in 1901, to the present day. The beginning of this famous struggle is fresh enough in the recollections of the investing public. Mr. Hill had conceived the purpose of purchasing, for his own Great Northern Road and the friendly Northern Pacific, one of the so-called "granger" railways connecting the Eastern terminus of those lines with the populous Middle West. Efforts to get the Chicago, Milwaukee and St. Paul having failed, the Chicago, Burlington and Quincy's $110,000,000 stock was all bought up, payment being made through a $215,000,000 bond issue guaranteed by Great Northern and Northern Pacific. The Burlington lines, as it happened, were close competitors of the Union Pacific system, and the Union Pacific had requested to be allowed a share in control of

the Burlington. This was refused; thereupon Union Pacific's owners, utilizing the very rare facilities of the money market, started in to wrest control of Northern Pacific itself from its existing owners. In this they really succeeded; the stock acquired in the open market amounted eventually to a clear majority.

What followed on the Stock Exchange is matter of history. The frantic bids of the rival interests against one another cornered Northern Pacific stock, drove its price to $1,000 per share, and, by the situation thus created, upset violently the whole market for other shares. A brief Stock Exchange panic ensued, first at New York and then at London; and so long as neither party would yield its position and surrender part of the cornered stock, a very grave menace to the investment situation necessarily continued. The solution sought, in the autumn of 1901, was the famous $400,000,000 merger, in which were placed the Union Pacific's $78,000,000 holdings of Northern Pacific stock, some $76,000,000 more owned by other interests, and $118,000,000 of Great Northern shares. The Federal Government's attack on the Northern Securities merger followed, and a year ago the Supreme Court finally ordered its dissolution.

Union Pacific, it will be remembered, thereupon claimed that precisely the shares deposited by it in the merger should be returned to it. Such return would, of course, have ensured its possession of the Northern Pacific property. In the suit brought for that purpose, Union Pacific's lawyers held that the $78,000,000 Northern Pacific shares had not been sold to the Northern Securities, but deposited in trust, and that dissolution of the trust should be followed by return of exactly the property deposited. This contention the Supreme Court rejected last February, declaring not only that the Northern Pacific stock had not been deposited in trust, but that return of it to the Union Pacific, a parallel and competing railway, would defeat the purpose of the decision against the merger. The Hill party thereupon carried out its plan of distributing Northern Securities assets, Northern Pacific and Great Northern stock alike, proportionately to the interest of each shareholder in the merger. Union Pacific, therefore, instead of its $78,000,000 Northern Pacific stock of 1901, received some $25,000,000 Great Northern stock and $32,000,000 Northern Pacific, the last-named sum being a clear minority.

The actual situation, then, since distribution of assets began a few weeks ago, is this: Union Pacific has been wholly defeated in the fight which it started in 1901. It has lost possession of the Northern Pacific, which was within its grasp four years ago; it has no more control over the Burlington than it had when the dispute began, and all that it has to show, as the outcome of the prolonged and expensive fight, is the fifty-odd million minority stock in the two railways now controlled by Mr. Hill, on whose boards, since the Northern Pacific meeting of March 18, Union Pacific is wholly unrepresented. It is not strange that this situation should have caused uneasiness as to possible retaliatory measures by the defeated interest, nor need there be much wonder at Wall Street's slightly skeptical attitude over the present announcement of mutual friendliness and harmony. Reasons against any outbreak of hostility, just now, are, however, strong enough to convince experienced observers that nothing of the sort will happen. If, as is probable enough, Union Pacific means to sell its minority holdings in these rival railways, it would hardly begin by depreciating their value. As for the Hill party, who hold possession already of all the spoils of war, it will not be imagined that they are seeking another fight. These facts considered, the vague announcement that an "understanding has been reached" scarcely surprised people conversant with the circumstances.

Perhaps a more formal compact may be made hereafter; at any rate, the situation is not very likely to remain exactly as just described. We imagine, however, that the nature of any binding agreement will depend on future rather than on past events. For one thing, the transcontinental railway ownership question is still in a somewhat delicate position. Mr. Hill has conformed to the letter of the law, by excluding directors from sitting on the boards of both his companies, and by lodging title to the two stocks with individuals, not with a corporation. Whether it would be quite easy to maintain this technical show of independence if a formal agreement should be made with a third transcontinental railway which controls a fourth, might be an awkward question.

COMMERCIALIZED COLLEGE ATHLETICS.

Mr. Henry Beach Needham, who writes in the current *McClure's Magazine* on "The College Athlete," is not the first investigator to discover that sport in our universities has become commercialized. For at least two decades, athletes have been hired directly or indirectly, have been offered "inducements" of various kinds, and recruited systematically from preparatory schools, as well as from various walks in life. While posing as saviours of the physique of the nation, playing for the love of the game and the college, these men have profited not a little "on the side" because of their prowess. They have had the "refusal" of an education at various "leading institutions," and occasionally have graduated before rising to the eminence and renown of the professional baseball player or football coach.

Mr. Needham has taken pains to collect a large number of instances of the commercial athlete, which together make an astounding showing, reflecting not merely on undergraduates and graduates, but on faculties and presidents as well. Princeton, Brown, Pennsylvania, Harvard, Yale, Williams—not one of them but has experienced the evil results of the undue publicity given to undergraduate athletics, and of that desire to win at any cost which Mr. Needham finds to be one of the chief causes of the "grafting" and subsidizing so prevalent in our colleges. "We were all right in Pennsylvania two years ago," said a prominent alumnus to Mr. Needham, "but undergraduates and alumni felt that we had to do *as the other colleges were doing*. It is all summed up in these words: *'Couldn't stand losing.'*" For this feeling, more than one college president who believes in advertising his institution by its teams is largely responsible. They look on with indifference while recruiting sergeants visit the preparatory schools and begin the process of demoralizing athletes of value who must work their way through college. For these there are enticing offers of scholarships, odd jobs of every description, the managership of eating clubs or boarding-houses, the profits of score-card advertising, or what not.

The scandal of 1899 in connection with Sanford, Columbia's paid football coach, is almost forgotten, but Mr. Needham recalls it. In connection with the manager, this gentleman "induced" several stars to wear the Columbia uniform, in which they defeated Yale with ease. Subsequently, Columbia allowed a man to represent her who had previously played for Manhattan College in violation of eligibility rules. Harvard has just permitted the playing of a student who "by accident" twice figured on a score-card of a professional game under another name. He explains that he received no money for this service, which was merely to oblige friends, and that in each case he entered the game after the score-cards had been printed. Smith of Pennsylvania seems, however, to be the star "tramp athlete," for he played with Pennsylvania and Pennsylvania State in the same season. Lamson of Pennsylvania has worn the jerseys of Lafayette, Colorado College, and the Philadelphia institution. The Peddie Institute, a preparatory school, was last fall "robbed" of its best football player by Pennsylvania, according to an officer of the school, to whom the boy stated that he had been offered at Princeton a summer's board and tutoring. Penn-

sylvania's offer was higher, and to make his educational path easy he was enrolled in the Dental School, which requires no entrance examinations, and was subsequently "transferred" without examination to the Wharton School of Finance and Commerce. This also contains a football player who could not pass the Cornell entrance examinations.

Summer ball-playing for board and lodging has found its victims at Brown as well as Harvard, and is a familiar story. A new method of commercializing athletes, however, is the employment of Hogan, last year's Yale captain, by the American Tobacco Company. Hogan entered college poor. He now lives in the best dormitory and takes his meals at the expensive University Club. He receives $100 a year, the income of the John Bennetto scholarship, and shares with two other athletes the profits arising from the sale of score-cards and the advertising thereon. But his main source of income is from acting as agent of the Tobacco Company. Here is the enlightening statement of an officer of the company:

"College men are great cigarette smokers. When they graduate they go to different parts of the country, carrying with them a taste for some brand of cigarettes. Naturally we want them to acquire a taste for our cigarettes, and to carry the taste to their friends at home. That is why we engaged Mr. Hogan. He is a popular fellow, well known—captain of this year's football team—and we picked him out as a good agent. He did get our cigarettes put on sale at 'Mory's.' But his efforts did not end there. He talks the cigarettes to his friends. They appreciate and like him; they realize he is a poor fellow, working his way through college, and they want to help him. so they buy our cigarettes, knowing that Hogan gets a commission on every box sold in New Haven."

This is a most sagacious Yankee scheme, with infinite chances of development. We suggest to President Hadley, however, that, inasmuch as the public is entitled to know just what businesses the players represent, they wear numbers, and be catalogued on the score-card as follows: 1. Smith, quarterback (Try Standard Oil's oil). 2. Brown, halfback (Use Sapolio after playing). 3. Jones, left guard (Pond's Extract best for bruises). 4. Hogan, tackle (Smoke Egyptian Deities). 5. Williams, centre (Read the *Daily Horror*), etc. The possibilities are infinite. We offer gratis to presidents in need of larger endowments the hint that the college rent each player to the advertiser making the highest bid.

That all athletes are now commercialized, it would be ridiculous to assert. But the contamination of a few such examples spreads. Athletic committees are afraid to defy the alumni who want to go wrong like other alumni. Presidents shirk their responsibility by leaving everything to the athletic committees. As a result the evil is, if anything, growing despite repeated exposures. Prof. Alfred H. Lloyd of the University of Michigan wrote recently: "Professionalism, in fact, if not in name, is constantly checking the real usefulness of all student activities, not merely of athletics. The social life is injured by it. The religious life is perverted and robbed by it." If this state of affairs is not soon taken in hand by faculties or college presidents, we shall be very much surprised.

ART PRICES AND ART VALUES.

Unquestionably, the gayest branch of the "Dismal Science" is that which deals with prices regulated by fashion or fancy. In fact, this whole class of values puts economic analysis to its trumps. One may say pretty definitely that the price of a bushel of wheat, for example, is essentially its value as food, plus or minus the difference caused by a shifting, and at times speculative, supply and demand; but what may one guess is the warrantable price of, say, the first purple carnation? The wide gap between art values and art prices was strikingly illustrated last week. We pass over the price of $81,375—paid on Friday for a Renaissance crystal cup of questioned authenticity — as inexplicable on any rational theory. A few days earlier, at Christie's, Thomas Watson's mezzotint after Sir Joshua Reynolds's "Lady Bamfylde" fetched $6,100. Thus a skilful black-and-white reproduction—of which many examples must be in existence—brought a price within which a careful buyer may get a very fair original of Sir Joshua. Or, to put the matter in another light, a day or two after the record sale of what at best was a clever bit of copyism, a fine example of that master of the brush, Chardin, sold at Paris for $5,500, while at the same sale a veritable Sir Joshua Reynolds brought only $2,640.

Now recall that for the price paid for this single reproductive engraving one could buy a score of the best engravings by Dürer, in the finest states, or a dozen of Rembrandt's finest etchings, an original by Watteau, a cabinet full of Hokusai's sketches and woodcuts—works of art far superior to, and of greater scarcity than, any translation of Reynolds by the cleverest wielder of the rocker and burnisher—and it will be clear that values, as perceived by artists and connoisseurs, by no means agree with the prices paid by collectors. To account for the discrepancy, many theories have been advanced, as that rarity is the principal criterion; but this is discredited in the case of the mezzotint engravers, whose works are far from rare. If only a few meritorious impressions were pulled from each plate, nearly all were promptly framed, and thus are preserved to this day. Of the small sheets of Dürer and Rembrandt, on the contrary, there has been unquestionably great loss and absolute destruction, so that no principle of rarity would justify a collector in preferring to theirs the work of such engravers as Raphael Smith, the Wards, Watson, or Valentine Green. But an even more convincing proof that rarity alone does not necessarily attract amateurs was found in the publication of a catalogue of "unique" books, by a London bookseller. If Mr. Voynich had believed that bibliophiles are attracted by mere rarity, he had only to put his *rarissima* (some scores of them there were) into the auction-room and retire immensely rich. As a matter of fact, he chose the wiser part of offering them by catalogue at very moderate prices.

If both absolute art value and rarity have rather little to do with price-making, we are reduced for an explanation to the madness that proverbially afflicts collectors, and to occult powers that set collecting fashions. That collectors are subject to malign lunary influence is beyond denial. A new Dibdin, for example, would find material for comment in the stewardship of a famous bibliophile, who, in the behoof of a local Y. M. C. A. library, became executor of a purveyor of the unrefined vaudeville of our fathers. Such books as that Y. M. C. A. library possessed would move a Locker-Lampson to verse, and possibly a revivalist to tears. The Bibles, in St. Jerome's Latin mostly, were from the early presses of Cologne, Strassburg, Venice, and Paris. Books of Hours and Chorals there were, both printed and cunningly engrossed and illuminated by hand. The youthful Christians were invited to read Dante in the superb edition which Botticelli or a pupil illustrated; to peruse Chaucer in black-letter. Thus, through the mediation of a bibliophile *pur sang*, the moneys proceeding from the shapeliness of a Lydia Thompson in "Black Crook" days were converted ultimately into grave divinity, and deposited on the shelves of a Young Men's Christian Association. From this pardonable digression we wish to extract the lesson merely that nothing a collector does is surprising, and that his infatuation lays him open to all manner of hypnotic suggestion, including autohypnosis.

Whoever studies fashions of any sort is sooner or later driven to take counsel of tailors. Somewhere or other there is a high tribunal which decides whether our pockets shall open inside or out, shall be few or many, whether our trousers shall favor the ankle, the knee, or the thigh, and a hundred other niceties necessarily obscure to the layman. And sometimes we are prone to imagine that somewhere or other there is a committee of art dealers which convenes and lays out the fashion for the next decade. One may fancy that, just as the humbler sort of tailors accept the ordinances imposed from above, concerning tape and trimmings, so the smaller art dealers chime in with a central authority when it whis-

pers now, "Sell Barbizon," and again, "Play Early English." But, of course, if it were not for human vanity the high court of tailordom would sit in vain, and if there were not an enormous number of collectors more enthusiastic than well informed, these passwords of the dealers would fall idly on the air, and the absurd prices produced by reckless competition in objects approved as the latest fashion would yield to an appraisal based, in part at least, upon permanent art values.

ARCHÆOLOGISTS IN THE ÆGEAN.

ATHENS, May 6, 1905.

The International Congress of Archæologists, which closed three weeks ago, was followed by two excursions, one to the sites of excavations on the mainland, the other to those on the islands of the Ægean and on the coast of Asia Minor. The second excursion, in which alone I shared, came to an end yesterday, and was of such extraordinary interest as to seem worthy of public notice.

The party consisted of one hundred and thirteen, representing most of the countries of Europe as well as America. It was quartered upon two small Greek steamers having many good qualities, but cleanliness was not one of these. The expedition was conducted by Dr. Wilhelm Dörpfeld, whose supreme ability and tact were never better displayed. Our first visit was to Delos, the sanctuary of Apollo and for a time the seat of the treasury of the Delian Confederacy. The French excavation of this site is not yet completed; most of the finds have been placed in a museum on the neighboring island of Mykonos, but a building is now in course of erection at Delos where they will eventually be kept. The appearance and height of Mt. Kynthos are decidedly disappointing. The remains of the theatre gave Professor Dörpfeld an opportunity to discuss his theory of the Greek stage, which he advocated with his well-known clearness and skill.

After this day there followed a glorious sail among the Cyclades, to the island of Melos, where we landed to view the excavations conducted by the English at Phylakopi. Here have been traced the foundations of a prehistoric city surrounded by cyclopean walls and containing a palace of the Mycenæan period. The next morning we saw the sun rise from the harbor of Santorin, the ancient Thera. Of all the islands this proved to be the most unique and picturesque. The harbor is the sunken crater of an old volcano, of which the present island and the two small neighboring ones, Therasia and Aspronisi, are the rim. Thera has been the special study of Freiherr Hiller von Gärtringen, who has endeared himself to the inhabitants by his kindness and benefactions. The whole island was astir with interest and enthusiasm, and everywhere "the King of Thera" was greeted with speeches of welcome, and walked on ways strewn with roses and under triumphal arches. His fellow-passengers shared in the welcome, and received unbounded hospitality. Under his guidance we were conducted through the ancient city, excavated by him in 1895-1902. The results of these excavations are published in a recent work, and are extremely interesting to the student of ancient Greek life. A museum in the modern city of Thera contains many objects of archæological curiosity.

Our next stay was at Crete. The insurrection, of which your readers have heard so much, was nowhere in evidence, although we visited four points on the island. The first object of attention was the museum at Candia, in which are stored the remarkable finds of the various sites of excavation. The beauty and interest of these objects are surprising, and indicate a high stage of culture at the early period to which they are ascribed. It would take a volume to describe these remains, and I can single out for mention only the fresco paintings and pre-Mycenæan vases (the so-called Kamáres ware) as of special interest. An hour's ride from Candia brings one to Knossos, where we were welcomed by Mr. Arthur Evans, who was at work with a large force on his excavations. That very afternoon—as if, he said, to do honor to the Congress—an ancient stairway lying some ten feet below the surface appeared for the first time in many centuries. It evidently belonged to some important complex of buildings, now in process of excavation. The extreme thoroughness and care with which the digging at Knossos has been conducted were a theme of general comment. Under the guidance of Mr. Evans the portion of the company understanding English were conducted through the Mycenæan palace, while the Germans were guided by Dr. Dörpfeld, and still another section followed a French scholar. Mr. Evans pointed out that this palace was built on the site of successive settlements, going back possibly 10,000 years, and that it was probably destroyed by fire about 1500 B. C. One shaft showed deposits thirty-five feet in depth. An English tea served in the shade of an olive grove refreshed the company not a little.

The following day we made a brief visit to Gournia, the site of the labors of our dauntless American archæologist, Miss Harriet Boyd. Here we saw walls of prehistoric houses and of a small palace, which Miss Boyd thinks older than the Mycenæan period. We tried to land at Palaikastro, the site of excavations conducted by the British School at Athens, but the high sea came near upsetting one boat, and prevented many from making the attempt. Phaistos was in some respects even more interesting than Knossos. Its situation is wonderfully beautiful. The Italians have done the work here in a most admirable manner. Two building periods are clearly visible; an older palace lying under the remains of a younger one. From the ruins of this palace one receives the impression of a lordly mansion, fitted up with luxurious appointments. Particularly impressive is the series of steps, leading to a large open court, which may have served as a place of exhibition or a *theatron*. A light and hard limestone, called alabaster stone, and quarried in Crete, was used abundantly in the construction of this palace.

We next sailed to Cnidos and had glorious views of Rhodes and other islands. Cnidos is still virgin soil for explorers. It was easy to trace the walls of the ancient city, running from the summit of the cliff to the sea. A well-built exedra, a large theatre, the moles of the two harbors, one facing north and the other south, and numerous foundations made the archæologists of our party eager for the chance to put pick and spade into this promising ground. Two houses of Turks alone occupy the site of this once-flourishing city, for whose inhabitants Praxiteles made his famous Aphrodite.

The next day saw us at Cos, an attractive island by reason of its fertility and beautiful outlines. It was in ancient times a second Epidaurus and the home of famous physicians. It enjoyed its greatest prosperity under the Ptolemys. The beauty of the island is celebrated by Theocritus, and a poem of Herondas speaks of statues which once stood on bases near the temple of Asclepius. Possibly, a statue of a half-nude Aphrodite by Praxiteles stood in the precinct of the Asclepieum, and it is quite certain that this temple possessed a painting of Aphrodite Anadyomenos by Apelles. This ancient sanitarium flourished after the beginning of our era. The ruins of a fountain house built by Nero are still to be seen.

Our next point of attack was Didyma, the seat of the great Apollo temple. Our path led over the sacred way from Panormos, once lined with statues, some of which are now in the British Museum. Two lofty columns with a piece of the architrave resting upon them, with many fragments and foundations, mark the site of the great temple. Much of the excavation remains to be done. The wish was expressed by several scholars of different nationalities that some American Crœsus would furnish the means to complete what promises such an abundant reward.

The following day was the Greek Easter. We landed at the site of ancient Samos to examine the few remains of the old city and to see the aqueduct constructed by Polycrates. We went also across the bay to the ancient Heræum, a solitary ruin, close to the sea, of which only a single column and foundations remain. In the afternoon we were received by the Prince of Samos, who, though an appointee of the Sultan, is a Greek, and holds practically an independent position.

Monday, May 1st, was spent at Ephesus. A more melancholy ruin than that of this once flourishing city it would be difficult to imagine. The ancient harbor is a morass. The whole site is marshy, and the unusual amount of rain that has fallen this year has flooded many of the ruins. Blocks of marble were scattered over the entire length of the street (about 600 metres) from the old harbor to the Agora. Ruins of probably the oldest church edifice remain *in situ*. It was built of brick, and, from an inscription, it seems to have been dedicated to the Virgin Mary. In this church were held the two councils of Ephesus. The best preserved of the ancient buildings is the library, which had a handsome façade and a grand stairway leading up to it. Thirty niches for shelves are seen, which could hold 24,000 rolls of parchment. These ruins were explained to us by Professor Heberdey, who has had charge of the work for the Austrian Government. Later in the day a number of the party walked to the Artemisium, situated about a mile and a half northeast of the city. The excavation of this great temple is still in progress, and its exact dimensions are not yet accurately determined. The foundations are under water, and it is a difficult

task to make trenches and to lay bare the ancient structure. Whether the work is really worth doing, is a question that suggests itself, in view of the magnitude and expense of the undertaking.

The next day was given to Pergamon, where the Germans, under the effective leadership of Dörpfeld, are still digging. As one clambers about the stupendous ruins of the city, one wonders why it was ever built so far inland, on such a steep height, and on a site requiring such an enormous outlay. Of special interest here are the theatre and the great altar of Zeus, supposed to be referred to as "the throne of Satan" in the Book of Revelation. From this altar were taken the great slabs of the frieze, representing the contest of gods and giants, now in the Berlin Museum.

The last day but one of this interesting tour was devoted to "Troy divine." The hill on which the city was built occupies a commanding position between the Simois and the Scamander. The plain is surprisingly fertile and beautiful, many oak trees dotting its surface. Far in the background looms up Mt. Ida, with snow-capped summit. With consummate skill, Dr. Dörpfeld explained the labyrinth of walls and complex strata of débris, and pointed out the nine layers of ruins that succeed one another and testify to successive periods of occupation. All scholars know that Schliemann was misled in placing the Homeric city in the second stratum, and that it is the sixth from the bottom that belongs to the Mycenæan period. Most impressive is the great wall, with its gates, which surrounded and guarded the city of Priam. As we stood on the ruins of the huge tower that defended the entrance at the northeast, and as we overlooked the plain, the old story of the wrath of Achilles and the death of Hector gained new meaning, and became a vivid reality.

The next day, on board the *Antigone*, Professor Dörpfeld instructed us with his theory of the composition of the Odyssey, but the length of this letter forbids my giving any account of it now.

M. L. D'Ooge.

COUNT LAVALETTE'S MEMOIRS.—II.

Paris, May 15, 1905.

Lavalette filled the office of Director of the Post-Office during the period of the Empire. He had been made a Count, a Councillor of State. He organized the difficult service of the post at a time when the limits of France extended to the Rhine, to the two peninsulas of Spain and Italy, and armies were kept all over Europe; he became, so to speak, the centre of a perpetual movement between all parts of the Empire.

The events of 1814 put an end for a time to his public career. When he heard the news of Napoleon's return from the Island of Elba and of the departure of Louis XVIII., he went to the General Post-Office and resumed almost naturally his functions; he awaited Napoleon's arrival at the Tuileries.

"I found, towards eleven o'clock, an order to go to the Tuileries. I saw there the former ministers and the Emperor in the midst of them, speaking quietly of administrative matters as if it had been ten years before. He came out of his bath wearing his undress uniform. The subject and tone of the conversation, the presence of all those persons who had so long worked under him, contributed to efface completely from my mind the family of the Bourbons and their one year's reign. On one of the pieces in the apartment were placed, without any order, the marble busts of Louis XVI., of the Dauphin, the father of the present princes, and of a few princesses. These busts were removed the next day."

When Napoleon saw Lavalette he went to him, pinched his ear, which was the mark of his greatest favor, and offered him the Ministry of the Interior. Lavalette declined it, and asked to be simply appointed Director of the Post, where he thought he could be more useful. "Well," said Napoleon, "I will take Carnot." The Emperor, Lavalette says, made a good choice; Carnot was a patriot and an honest man. Molé was introduced; he refused the Foreign Office and likewise returned to his post of the Ponts-et-Chaussées. The Emperor placed Fouché at the head of the police, though he had not much confidence in him.

"One evening," writes Lavalette, "everybody was gone when the Emperor entered with Fouché a room next the one in which I was. The door was not quite shut; they both walked and talked quietly together. I was much surprised after some time to hear the Emperor tell him: 'You are a traitor. Why do you remain Minister of Police if you want to betray me?' I did not hear Fouché's answer, but the conversation lasted a half-hour more, both men continuing to pace up and down. . . . The next day Napoleon spoke to me of this conversation. 'I suspected,' said he, 'that the wretch [*le misérable*] was in correspondence with Vienna. I had ordered the arrest of a banker's clerk who was coming from that city; he confessed having brought to Fouché a letter from Metternich, and that the answer was to be sent on a given day to Bâle.'"

Fouché, with some reluctance, confessed that he had actually received a letter, but denied that it was signed. He was certainly in correspondence with Vienna; he was preparing for any emergency. Napoleon knew it, but he found it more convenient to watch him than to dismiss him.

The day after Napoleon's arrival from Waterloo, Lavalette went to the Élysée. The Emperor received him with a sort of hysterical laughter, and, after he had recovered his presence of mind, asked what was going on in the Chamber of Deputies. Lavalette did not conceal from him the fact that the majority were determined to ask for his abdication, and, if necessary, to impose it. "Why," said he, "don't they take measures against the enemy? He will be here within a week. Alas! I have accustomed them to such great victories they cannot bear one day of misfortune. What will become of poor France? I have done for her all that I could." After the abdication, the Emperor retired to Malmaison and presently left France. A few days after his departure, Lavalette was informed that a list of proscripts was being made by Talleyrand and Fouché. On the 18th of July, he was arrested—the same day as Labédoyère. He was sent to the Conciergerie, which received a few weeks afterwards Marshal Ney. He was accused of having entered into a plot during Napoleon's stay at Elba, using the facilities which he found in the Post-Office, of which he had been so long the Director; of having resumed his functions in the Post-Office on his own authority, and employed them in favor of Napoleon while the latter was on his way to Paris. The jury pronounced affirmatively on these two questions: Is the accused guilty of conspiracy? Is he guilty of usurpation of power? The verdict had for its necessary consequence a condemnation to capital punishment.

Madame de Lavalette asked the King for an audience, which was granted her as a special favor; the like had not been conceded to Madame de Labédoyère or to Madame Ney. She was conducted before the King by the Duke de Duras, and fell on her knees before the Sovereign, who merely said to her: "Madame, I have received you in token of my interest." No more was said; she was the daughter of an *émigré*, and it was generally thought that this audience implied a pardon. Madame de Lavalette was born in 1780. Her maiden name was Louise Émilie de Beauharnais. Her father, the Marquis de Beauharnais, represented the elder branch of the family. He had a brother Alexandre, who was married to Mademoiselle Tascher de la Pagerie. During the Revolution the Marquis emigrated and joined at Coblentz the army of the Princes. His wife was arrested and remained two years in prison. The young Émilie had been left in care of a governess. Napoleon afterwards arranged the marriage between her and his aide-de-camp Lavalette, while she was still in the *pension* of Madame Campan. Lavalette saw her but little during the early days of his married life, as he could not often leave the army. When Josephine became Empress, Madame de Lavalette became one of the *dames du palais*. She did not much like her functions, and, after the divorce and the Emperor's marriage with Marie-Louise, she seized the opportunity to regain her liberty. From that time she was but little seen at the Tuileries, and lived almost in retirement.

The Court of Cassation rejected Lavalette's appeal, and the day of the execution approached. On the eve of it the Countess Lavalette was admitted to the prison. She wore an ample gown lined with fur, which she usually wore when she went to a ball; she had a bag, in which she had placed a black silk petticoat. When she saw her husband, she told him that all was lost, that he could hope for no reprieve or pardon, and that it only remained for him to take flight in disguise. She showed him the clothes she had brought; a *chaise à porteurs* was at the door of the prison, a carriage was waiting on the quay; a safe retreat had been prepared for him. Lavalette had prepared himself to die, and refused his wife's offer. He was afraid of being arrested in woman's costume, thus adding ridicule to the tragedy of his death. His wife insisted, and in the end he yielded. She dressed him, put her own hat on his head, and rang for the porter; Lavalette left his cell, followed by his wife's servant and her daughter. Nobody interfered with this group of women, apparently overpowered with sorrow; the soldiers on guard at the door saw them go by. Lavalette entered the sedan-chair, and soon after went off in a cab.

The escape took place on the 23d of December, and Lavalette remained in concealment in Paris till the 10th of January. By a singular favor of fortune, he found an asylum, where nobody could think of looking for him, in the Ministry of the Foreign Office, which was then occupied by the Duke de

Richelieu. One of the employees of the ministry was M. Bresson. He had been a Deputy in the Convention, had voted against the execution of Louis XVI., and been proscribed; had found, with his wife, an asylum in the Vosges, in a family with whom he remained concealed for two years. Madame de Lavalette addressed herself to her, and, though she did not know Lavalette, she offered to give him a room in the Ministry. Her husband was absent at the time, but she did not doubt that he would approve her conduct. On his return Bresson entered willingly into her views. It was arranged among them all that Lavalette should pass for a new valet. Meanwhile, Madame de Lavalette was kept as a prisoner and treated with great severity, all the more because her conduct had given her great popularity.

The police made active search for her husband, who felt that he could not remain very long where he was, and determined to leave France if he could. The Princess of Vaudémont, his great friend, found in the circle of Madame de Saint-Aignan two Englishmen, a Mr. Bruce and General Wilson, who consented to help him out of the country. Wilson had already tried unsucessfully to save Marshal Ney; he was more fortunate with Lavalette. The route to Belgium through Valenciennes was selected. Lavalette was dressed like an English officer; he left his hosts on the 9th of January, 1816. There was no incident on the journey. The frontier having been crossed, Lavalette set out for Worms and Bavaria. He established himself in Munich, under a false name for a time, and afterwards stayed at Augsburg.

Madame de Lavalette, the heroine of this dramatic escape, was kept in prison for six weeks. When she was set free, the excitement she had experienced threw her into a state of profound melancholy, which soon took the form of a mental malady. She recovered after a while, but had a relapse, and when her husband returned to France, after six years of proscription, he would never again take her into society. They lived in great seclusion. By degrees she lost her mind completely, and he had no other consolation, he says himself, than to collect his memories of a great epoch and of a great man.

Correspondence.

POPULAR ELECTION OF SENATORS.

To the Editor of The Nation:

Sir: In your article on "The Senatorial Primary" in your issue of March 2, you overlook the State which was the pioneer in providing legally for popular participation in the choice of Senators. Just thirty years ago the present Constitution of Nebraska was framed with an article, separately submitted and adopted, expressly authorizing the voters to express their preference for Senatorial candidates. The privilege has been exercised repeatedly on a large scale. Thousands of electors cast their ballots for General Van Wyck as a candidate for Senator in 1886, for Mr. Bryan in 1894, and for (then) Congressman Burkett in 1904. The last named had also been nominated by the State convention of the dominant party, and his election as Senator was registered by the Legislature with hardly more of an interruption of routine business than you describe as having occurred in South Carolina two years ago. The Constitution of the latter State, by the way, proclaimed in 1896, contains a provision similar to the Nebraska clause; and in a paper read before the Nebraska State Historical Society and published in the Annals of the American Academy for May, 1900, the writer presented the results of a comparative study of State Constitutions, disclosing that South Carolina alone had borrowed the idea from Nebraska, and that it was original with the latter. The nomination of Senatorial candidates by party conventions, however, had been employed in Illinois, as in the case of John M. Palmer in 1890, while the famous Lincoln-Douglas debate of 1858 had brought the choice of Senators there directly, though informally, to the people at an early day.

You say that "so long as the Senate itself opposes it, a Constitutional amendment is out of the question." But why "out of the question" when the Constitution (Art. V.) makes it mandatory that "the Congress, . . . on the application of the Legislatures of two-thirds of the several States, shall call a convention for proposing amendments which . . . shall be valid, to all intents and purposes, as parts of this Constitution when ratified by the Legislatures of three-fourths of the several States or by conventions in three-fourths thereof"? Again, you say that "the agitation for a change in the organic law is practically hopeless." But why hopeless, when the Legislatures of no less than thirteen States have made this prescribed "application," while those of nine more have passed resolutions to the same end?

Had the movement been properly directed from the beginning, so that these resolutions had been made formal "applications," action would now be lacking on the part of but eight State Legislatures (which ought to be secured in a single winter) in order to require Congress to move. Much may be hoped for from the direct primary in bringing the Senate closer to the people; but would it not be wise for great moulders of public opinion like the *Nation* to endeavor to direct the movement for a Constitutional change and lead to a speedy and successful issue?

Charles S. Lobingier.

Department of Justice, Manila, P. I.

A CORRECTION.

To the Editor of The Nation:

Sir: Permit me to correct a mistake which has found its way into your report about the exchange of teachers between the French and Prussian Governments.

Rossleben, for which the latter Government has obtained the services of a graduate from France, is situated not on the Franco-German border, but in the Prussian province of Saxony. The Rossleben Klosterschule, founded in 1554, is an institution similar to the *Fürstenschulen* at Pforta and Meissen.

J. H. S.

Berkeley, Cal., May 22, 1905.

Notes.

The issuance in June of 'Provincial America,' by Prof. Evarts B. Greene of the Illinois State University, as a separate sixth volume in Prof. A. B. Hart's "The American Nation" (Harpers), marks a departure from the first procedure, when five volumes were brought out at once. Hereafter the work becomes, in a way, a monthly periodical.

'The Art of the National Gallery,' by Mrs. Daniel D. Addison, to be published next fall by George Bell & Sons, London, will have for its American imprint the firm name of L. C. Page & Co., Boston.

It is five years since we noticed Prof. Wilbur L. Cross's 'Development of the English Novel' (Macmillan). Meanwhile it has undergone six impressions, inclusive of the one before us. This shows that it is readable, as well as suitable for a text-book and for a book of reference. The index embraces the titles of novels commented on, along with authors and general subjects; the bibliographical notices furnish a handy conspectus.

The "Biographical Edition" of Robert Louis Stevenson's Works is tasteful in form, decently printed in large type, and more weighty in the hand than one would expect from its convenient size. The two volumes before us are 'Kidnapped' and the 'New Arabian Nights.' Mrs. Stevenson's brief introductions furnish many interesting particulars as to the occasions of writing and the use of sources; but one might wish for more dates, or indeed for any.

Dr. Horace N. Allen, who, after a long and successful career as minister of the United States to Korea, retires, to make way for the new appointee, Mr. Edwin V. Morgan, has republished his two books 'Korean Tales,' long out of print, and 'A Chronological Index' in one volume, entitled 'Korea: Fancy and Fact' (Seul: Methodist Publishing House). To the two descriptive articles and the seven bits of folk-lore—the largest collection in English—Dr. Allen has added foot-notes drawn from his maturer study. For example, he considers that, instead of sixteen, Korea has but eight million people. In the second and larger part, he has brought the record of events to 1904, added lists of consular and diplomatic representatives, treaties and agreements, decorations, a bibliography of works on Korea, and an alphabetical index, making a hand-book of value.

Volume 5 of Dr. Thwaites's Journals of Lewis and Clark finds the expedition moving eastward, still hungry, food being scarce, and more ready to eat horsebeef than the Indians, who did not object to the taste, but had a sentimental feeling for the animal. Lewis treats them medicinally to general advantage; observes that some Indians clearly would have been bearded if they had not resorted to deracination; makes a "Digest" of Indians seen or heard of west of the Rockies, and reckons them at sixty to seventy thousand. The Bitter Root Mountains in May were still impassable with snow. On July 3, 1806, Lewis and Clark part company for reasons of transportation, to reunite later, but not till after the fatal encounter (July 27) of Lewis with thievish Minnitarees, which bred a legacy of bad blood for years to come. The narrative breaks off at September 26. There are few facsimiles from the MSS.

The second volume of Chancellor and

Hewes's 'The United States: A History of Three Centuries' (Putnams) does not evoke a judgment materially different from that pronounced on its predecessor. There is the same superficial treatment, the same apparent reliance on miscellaneous secondary authorities, the same jaunty and inflated style, and the same errancy. The period covered, 1698 to 1774, is of course one of fundamental importance, and one to whose better understanding there is need of substantial contribution; but we cannot discover that the authors have done more than scratch the surface of the field, while of new material there is none. For example, the chapters which deal with the history of the individual colonies offer little more than lists of governors and of a few well-known incidents, strung together without other than chronological connection, while those on the causes of the Revolution are not likely to help the reader to understand what the Revolution was all about. The sections relating to social and industrial conditions, presumably the work of Mr. Hewes, are more informing, but even here the "scrappy" character of the material, the lack of dates, and the frequent repetition or overlapping make the course of development hard to follow. It is to be regretted that a work so attractively got up should thus far exhibit so slight intrinsic merit of either substance or form.

To the Old English texts in the "Belles-Lettres Series" (D. C. Heath & Co.) have been added 'The Gospel of St. Matthew' and 'The Gospel of St. John,' edited by Prof. J. W. Bright, who has already edited the Old English version of Luke for the Clarendon Press (1893). The present volumes are neatly and attractively printed, of handy size, and inexpensive. The texts and variant readings are based upon a collation of Skeat's edition with the original manuscripts. 'The Gospel of St. John' contains a concise but full account of the extant manuscripts of the West-Saxon gospels, a statement of the arguments for and against a plurality of translators, a reprint of the "Lakelands fragment" discovered by Napier, notes (chiefly devoted to assembling the renderings of passages from John found in other Old English works), and an exhaustive glossary, contributed by Prof. L. M. Harris. 'The Gospel of St. Matthew' is issued without introduction, notes, or glossary, but most of the questions relating to all four gospels are treated of in the introduction to the other text. As the editor points out, these versions of the gospels antedate the Wyclifite Bible by four centuries, and are a subject of fruitful study to the student of English and to the student of Scripture.

Out of the fulness of his experience Mr. Eustace Miles, an English ex-champion at tennis and the like, and a creditable teacher at Cambridge, has prepared 'A Boy's Control and Self-Expression' (E. P. Dutton & Co.) to set forth the training that would better prevent the moral and physical errors into which boys are most liable to fall. Unfortunately, this requires nearly six hundred pages. His very laudable motive is to lead a boy to maintain purity of body and mind, without interfering with his physical or mental vigor and elasticity, or rendering him abnormally self-conscious. His doctrine is a combination of what is known as "The New Thought" (although he does not so designate it), the substitution of a fleshless (not a vegetarian) diet for the more stimulating one of abundant meat, a general adhesion to the theory of high and troublesome vascular tension as depending upon uric acid in the circulation, and a special advocacy of complete mastication, deep breathing, abundant light and fresh air, combined with regular and interesting occupation, although he does not insist too much on the occupation being interesting. Mr. Miles carries on a strenuous warfare against the flesh and the devil, and most boys and young men would be happier in following his general example, whether his hypotheses are to be accepted or not. One may doubt, for instance, whether a complex secretion once formed is liable to be reabsorbed; and it may be that a man who has made a hundred versions of the Lord's Prayer (p. 82), none of which is satisfactory to him now, will very greatly modify his views at large ten years hence.

In the beautifully printed work 'Orchidaceæ: Illustrations and Studies of the Family Orchidaceæ, Issuing from the Ames Botanical Laboratory, North Easton, Mass.' (Houghton, Mifflin & Co.), Mr. Oakes Ames presents the first fascicle of a serial devoted to the illustration of some of the rarer and imperfectly known species of orchids. For a good many years Mr. Ames has given attention to this striking order of plants. Besides keeping a large number of the finer sorts under successful cultivation, he has undertaken their hybridization, with fruitful results. A few years ago he established at his home a laboratory for research along botanical lines. It possesses a copious library and a growing herbarium. The present volume gives in a permanent form some of the more important discoveries made by Mr. Ames in regard to certain orchids. It is enriched by illustrations, made by Mrs. Oakes Ames, to which special attention should be called for their fidelity and spirit. The drawings upon which the heliotype reproductions are based, are among the most satisfactory botanical sketches known, and easily take place in the first rank. The volume is a valuable and interesting contribution to the knowledge of a part of one of the most attractive orders of flowering plants.

Mr. David W. Hoyt, Providence, R. I., brings his painstaking work on 'The Old Families of Salisbury and Amesbury, Mass.' nearly to a conclusion with Parts 9 and 10. With Part 11, including additions, corrections, and index, the enterprise will be terminated in two volumes, for want of adequate support of its continuance. The two parts before us deal with Davis, Dow, Eaton, Hoyt, Martin, Merrill, and Morrill; Morrill will proceed in the final part, and Wells be added. This is a genealogical work of first-rate excellence in presentation, and it is printed with an elegance not always correlated with intrinsic literary or scholarly work.

The Royal Society of the Antiquaries of Ireland have just put out the sixth number of their Antiquarian Handbook Series (Dublin: Hodges, Figgis & Co.). During the last ten years they have organized excursions by sea to parts of the Irish shore and the north and west of Scotland. In connection with these, guides have been prepared, and reproduced later as antiquarian handbooks. The present volume relates to a cruise undertaken in the summer of last year round the northern, western, and southern coasts of Ireland and the adjoining islands. It is divided into nine sections, made up of papers by well-known archæologists, on the chief points of interest. The greater number are by Mr. Thomas Johnson Westropp, M.R.I.A. He deals in turn with Tory Island (County Donegal), one of the first stopping-places of the party, with the coast and islands of County Mayo and County Galway, with the coast of Clare and Kerry, and, last but not least, with St. Michael's Rock and the remote and inaccessible Skelligs. Other contributors are Mr. John Cook, who describes Inismurray, County Sligo; and Mr. James Coleman; not to mention Mr. Goddard Orpen, who has written an interesting acount of the headland of Baginbun (County Wexford), the last place visited by the Society. We recommend all who intend to pass a summer in or about Ireland to possess themselves of this interesting and attractive book; it will prove a valuable supplement to the stereotyped guide-book, which is too often the despair of the educated traveller.

In 'Études de Littérature et de Morale Contemporaines' (Paris: Cornély), M. Georges Pellissier presents twenty-two journalistic essays, uncoördinated as to subject, yet sufficiently uniform in spirit and expression for collective review. Among the so-called "intellectuels," M. Pellissier always stands with the group of liberals, tolerant in principle, but ready for lively polemics against reaction, and consequently keen in detecting vulnerable points in the latest views of such men as Bourget and Brunetière. "L'Affaire Dreyfus et la Littérature Française," for instance, ironically lays bare a variety of hardly laudable motives which drove men of talent into open injustice. Throughout his work M. Pellissier keeps to the forward path, and nowhere more clearly than in "L'École sans Dieu" (a review of Payot's 'Cours de Morale'), as well as in a lecture, delivered at Geneva, which brilliantly vindicates Voltaire against the wearisome charges of metaphysical impotence or indifference. The essayist virtually says with Léon Daudet (and with Voltaire), "Environné de relatifs, l'absolu pour nous n'est qu'un vertige étiqueté." In discussing diction and style, M. Pellissier readily admits the innovating principle in language, as in "La Langue Littéraire Moderne"; while in another paper he demonstrates the indisputable harmony between *le style noble* and the æsthetic postulates which imposed its use on the neo-classic playwrights. In several respects, these sensible and entertaining studies remind us of Edmond Scherer.

Under the title 'Verspreide Studiën op het Gebied der Geschiedenis,' Dr. P. J. Blok, professor of Dutch history in the University of Leyden, has collected his scattered contributions in a neat volume of 364 pages (Groningen: J. B. Wolters). At least two of these papers, on John of Nassau and the Battle of Mookerheide, had appeared as small bound volumes, previous to the publication of his great work on the History of the Netherlands, of which the sixth volume was issued a few months ago. After life-long service in the field of historical research and teaching, this successor of Fruin hopes, within two or three years, to issue the seventh and last vol-

ume of his history of the Dutch people. Of the twelve papers in the 'Studiën,' two deal with the Frisians, at Rome and in the Middle Ages. In treating of the religion of William the Silent, Blok makes him a sincere Calvinist, with peculiar breadth of mind and a determined purpose of toleration quite foreign to the Calvinism of his day. "The Last Half of the Nineteenth Century" is a vivid retrospect in scholarly form. One pleasing result of our author's publication concerning the battle of Mookerheide—so long the synonym for conversational malediction and general Dutch expletive—is the handsome memorial in marble and gold to "the generous blood of Nassau," poured out from the veins of two princes of this famous house, set up in the Reformed Church at the village of Mook, not far from the bloody heath. In the sixth volume of his History, the Republic under the Regents and the Republic under the Hereditary Prince-Stadholdership are considered. This covers the period of the American Revolution and the fall of the Dutch Republic, with the usual critical review of the sources of authority. We have thus a history (1702-1795) of the eighteenth century as the Dutch saw it, in the author's own style, combining the encyclopædic and the philosophic, and picturing vividly the social, religious, and commercial as well as political movement of the nation.

It seems that a warning is necessary lest the revival of interest in Hawker of Morwenstow, due to the publication of a new biography, should lead to the placing of undue confidence in his statements on matters of fact. Mr. Quiller-Couch, one of the highest living authorities on Cornwall and Cornishmen, declares point blank in the *Young Man* that, while in many respects Hawker was a fine, breezy character, he was in others somewhat of a humbug, not to say a "fakir." On one occasion, for instance, he lamented that at Morwenstow he was cut off from the world, and that the only book to which he had had access during the previous six months was one of the Fathers of the Church. Actually, he was at the time subscribing to Mudie's, and regularly receiving from them boxes of books. On the question of wrecking, particularly, according to Mr. Quiller-Couch, the testimony of Hawker "must not be taken too literally."

Japan is the principal topic in the *National Geographic Magazine* for May. In its fisheries, says Dr. H. M. Smith of our Bureau of Fisheries, it ranks above all other nations in the number of persons engaged in the industry, the amount of the product and its importance in the domestic economy, the skill shown in catching and the methods of scientific aquiculture, and the extent to which water growths of all kinds are utilized. He describes from personal observation several methods of catching fish, but omits to tell how sharks are taken. These are among the commonest and most wholesome of Japanese food-fishes, and are sent in immense numbers to the markets, where they are "butchered" as beeves are in our country. Mr. Smith saw a net for yellowtails over a mile long with a bag 900 feet long, 250 feet wide at its mouth, and 125 feet deep, and requiring 150 to 200 men to care for it. On one occasion 10,000 fish, averaging 20 pounds each, were taken at one haul. In each of the prefectures there is a department of fisheries, and many stations and laboratories have been established. The Imperial fisheries school at Tokyo has three departments of study, each with a three years' course, with provision for post-graduate work, and receives an annual Government subsidy of $70,000. An attractive feature of this as of all recent issues of the magazine is the copious photographic illustrations of the various articles and notes. The membership of the National Geographic Society, of which the magazine is the organ, has reached 5,000, making the largest geographical society in the world. Nearly every section of the globe is represented in it.

In a report of our consul-general at Tientsin, published in the Daily Consular Reports for May 19, is given a schedule of railways constructed and projected in China. The first heading should read "constructed and being constructed," as several of those mentioned are not completed. For instance, the list includes the American line from Canton to Hankau, 800 miles, about which there has been some diplomatic correspondence recently between Washington and Pekin. Work upon this has but just begun; less than fifty miles, if we are not mistaken, have been built, and it will probably be three years before the line will be opened. From the report, one would infer that the whole 800 miles were finished.

The Classical Association of England and Wales, constituted in December, 1903, has lost no time in pursuing one at least of its aims, *i. e.*, to improve the practice of classical teaching by discussion of its scope and methods. We have just received the circular of a committee appointed to consider the spelling of Latin texts for school and college use. They desire to have the opinion of teachers (and this must be founded not on theory, but on experience) as to (a) the marking of the long vowels in Latin texts intended for the use of beginners; and (b) the writing of the consonants or semi-vowels i (j) and u (v). Those who wish to assist the committee are requested to answer the questions in the form, and to return it with their signature and description to the honorary secretary, Professor Postgate, Trinity College, Cambridge.

Under the auspices of the Historical Society, a second loan exhibition is now being held in Oxford. It consists of some two hundred portraits, most of them lent by the various colleges and foundations, and representing personages who died between 1625 and 1714. This is the period of Van Dyck, of Lely, and of Kneller, and the University of Oxford might have been expected to possess numerous examples of these masters. Such is far from being the case. It boasts some good Knellers—the portrait of the mathematician Wallis is the best—but it has no unchallenged Lely (the portrait of Anne, Countess of Rochester, belongs to Lord Dillon), and only one Van Dyck, the Jesus College portrait of Charles I. The other so-called Van Dycks are said to be copies, and, indeed, some critics dispute the genuineness of the Charles I., fine painting though it undoubtedly is. In the absence of any authenticated work by his hand, the collection offers some fine pictures by his native-born assistants and pupils, *e. g.*, Riley's clever painting of "A Scullion of Christchurch," Robert Walker's "Oliver Cromwell" (lent by Lord Spencer), and J. M. Wright's splendid "Prince Rupert." Lely's assistants, Mrs. Beale and John Greenhill, and Kneller's Swedish rival, Michael Dahl, are also well represented. There is no doubt, however, that the pictures, as a whole, are interesting as historical mementos rather than as works of art.

—The Royal Historical Society, in the latest volume of its transactions (New Series, Vol. XVIII.), presents a series of seven essays besides Dr. Prothero's third presidential address. Among the essays, the most interesting item is a discussion of "A Supposed Conspiracy against Henry VII.," by Dr. James Gairdner and Mr. I. S. Leadam. The incident is connected with the flight of Edmund de la Pole from England and his residence abroad. As Dr. Gairdner is willing to admit, the King felt a good deal of apprehension as to what De la Pole might be able to accomplish; but while Mr. Leadam has been able to collect evidence which points towards a plot, the conspiracy was so obscure that, besides having eluded the notice of historians, there is much difficulty in following its progress even now. Of the other papers, Col. Lloyd's article upon "Canning and Spanish America" is the most likely to attract attention in this country. Dr. Prothero, who is nothing if not practical, dwelt last year upon the shortcomings of English bibliographers. On the present occasion, after disposing of a necrology that includes Lecky and Mommsen, he censures the neglect of English writers to produce adequate works on the history of the nineteenth century. This discussion leads to an interesting comparison between the part taken by modern history in the universities of France, Germany, and the United States, on the one hand, and the position assigned it at Oxford and Cambridge, on the other. Dr. Prothero goes so far as to print in schedule form a list of the courses actually given at the chief seats of learning outside of England, with the name of the professor attached to each course. The comparison is made to bring out a notable failure on the part of Oxford and Cambridge to give instruction in the political development of modern states. Of the two universities, Oxford incurs the severest criticism, on the ground that its school of history "is unquestionably the most productive and the most influential in the kingdom." Thus, while Professor Firth attacks the historical methods of Oxford at one point, Dr. Prothero assails them at another. It should be noted, however, that, since this address was delivered, the Modern History School at Oxford has so far enlarged its programme as to take in the period 1815-1878. When Professor Bury's St. Louis address is published, Dr. Prothero will find that it contains a forcible defence of his views on grounds more general than any which he himself has urged.

—It is some mitigation of the mischief of Chamberlainism that it has not only called forth many able restatements of the free-trade position, but has promoted fresh inquiries into economic history. One of the most useful of these studies was undertaken by Prof. J. S. Nicholson of Edin-

burgh, resulting in his Gilbey lectures, delivered at Cambridge last year, and now published under the title of 'The History of the English Corn Laws' (London: Swan Sonnenschein; New York: Scribners). This volume, though avowedly prepared to meet the present discontents, is entirely free from partisanship. It emphasizes particularly the connection of the Corn Laws with British social legislation in general, and warns against the danger of appealing to historical precedents without taking into account all the circumstances of the case. Professor Nicholson thus corrects certain misapprehensions common among free-trade advocates; he shows, for instance, that the effect of these laws in raising prices has been exaggerated, and that the struggle for their repeal is incorrectly described as a conflict of class interests. But his removal of popular errors in nowise weakens the case against protection. Thus, he makes it clear that, though the Corn Laws did not produce constant high prices, the fluctuations in price which they did produce were an evil both to the farmer and to the consumer. The writer's careful investigation of this phase of protective legislation leads up to the conclusion that, while its intention was good, its results were disastrous. His comment on the present situation is suggestive rather than dogmatic, but Mr. Chamberlain's party will gather cold comfort from such an expression of expert opinion as this: "It is said that conditions have changed, and that a change of economic policy is required. To such a general statement it may suffice to reply that the conditions have certainly become more complex, and it is improbable that methods which failed under simpler conditions will succeed under more complex." That their failure was complete, Professor Nicholson entertains no doubt: "They did not steady prices or benefit the farmer; they did not prevent the flow of labor from the country to the towns, and they did not make the nation independent of foreign food supplies."

—As a piece of historical composition, Mr. H. S. Wheatly Crowe's 'In Defence of a King' (Liverpool: Edward Howell) is decidedly amateurish. But we doubt whether it should be tried by ordinary canons since it seems to be designed altogether as a work of edification. The King in question is Charles I., who, to Mr. Crowe, is the one type for all ages of the righteous man and the great ruler. Of his own book, the author says in a brief introduction: "Founded on history and on such private assistance as I could collect, I have stated nothing in these pages which has not been generally accepted as true, nor have I stated anything without having good reason and good authority for so doing." After this prefatory declaration, the whole apparatus of footnotes and references usually employed in controversial literature would seem to be unnecessary, and in fact it is not supplied. After the exordium already quoted, Mr. Crowe opens his first chapter with the following sentence: "It has never been doubted by anyone that when Charles the First came to the throne, if not yet outwardly, but inwardly, the English nation was in an uncontrollable state of boiling disorder; for the arbitrary and bigoted ideas of Elizabeth, especially at the latter end of her reign, had done very little for the country's good." The book closes as follows: "As the king's body was being carried to the chapel, a heavy snowstorm came on, and the black pall which covered the coffin soon became completely covered by a sheet of pure white snow. Thus a sign! proclaiming his innocence, and an intimation that he had been received into the hands of the Great Keeper of all things. God rest his soul." We furnish our readers with some means of judging the character of this volume by quoting its alpha and omega. What lies between may be styled one of the curiosities of literature. Lest this statement seem unwarranted, we will give one further excerpt: "When the dreadful deed was over, which denounced all those who were concerned in it as murderers, one could only say, that there had been foully done to death the best Christian, the best master, the best father, the most worthy gentleman, and the greatest man that ever lived."

—The third edition of George Kamensky's translation of Mendeléeff's 'Principles of Chemistry' (Longmans, Green & Co.), probably from the definitive edition of the original, incorporates a laborious revision by Mendeléeff, for the years intervening since the last edition have been wonderful years for chemistry. Our readers need not, perhaps, be reminded that the book, as an account of the distinctive properties of all the chemical elements, which is its character, is one of the most, if not the very most, marvellous achievement in making a subject of infinite details untiringly interesting, and investing it with a power of taking root in the reader's memory. It is also valuable as expressing with unusual openness all the processes of thought of one of the greatest scientific reasoners that ever lived. It cannot, however, be called a model of judicious and calm logic. Whatever proposition Mendeléeff inclines to, which must be something illuminating his most famous discovery, will be for him "a logical development"; while anything else will be a "hypothesis," regardless of its logical genesis. The phase rule is admitted to the rank of "a theory," which he hopes may in time develop into "the true theory." On many points he is skeptical about the doctrines of the new chemistry, and sometimes his objections have no little force, but they are always exaggerated. Perhaps the most valuable addition to this edition, because the substance of it will not be found elsewhere, is an admirable account of all the metals of the rare earths, contributed to this edition from the pen of B. Brauner, than whom no authority could be higher and probably no other as competent in every way for this task. It shows the "periodic law," as it is called—though it never was anything more than a rule of waviness—suffering under the serious defection of over a dozen elements; and a whole horizontal line (or two, as commonly drawn up) is erased from Mendeléeff's table. Brauner compares the series of elements from cerium to ytterbium to the triads in the eighth column, iron, nickel, cobalt, etc., where the atomic weights progress while the general chemical character remains constant. This is a matter of deep interest for scientific logic on account of the extraordinary success of almost all the predictions that have been based on Mendeléeff's scheme, which have by no means been confined to the existence of scandium, gallium, and germanium. It cannot, of course, break the probative force of successful prediction, but it must cause men to scrutinize instances of it, and see to what circumstances it may have been due. We must add that the "periodic law" retains all the value it ever had for other parts of the table. The three English editions of the book, which have represented three successive Russian editions, have all had different English editors. The first of them was a fairly competent person as translators go, and the others have been careful about getting the numbers right; the last corrects the form of some names, and Wyruboff, for example, no longer occasionally figures as Wernhoff. But otherwise, the new editor leaves much to be desired, and in several instances renders statements false which in the previous editions had been rightly given.

—Dr. O. E. Lessing, of the University of Wisconsin, has published in his "Grillparzer und das Neue Drama" (Munich: R. Piper & Co.) an interesting contribution to the rapidly growing list of works dealing with Grillparzer. The day is long past when not only critics of the stamp of Wolfgang Menzel, but literary historians of considerable acumen, like Gervinus and Julian Schmidt, could afford to belittle the significance of the Austrian dramatist; though, among the living, Rudolf Gottschall could still coin the ludicrous phrase that "Grillparzer was incapable of development." There has grown up in Germany, within recent years, a Grillparzer literature inferior in volume and minuteness of research only to that which gathers steadily around the names of Goethe, Schiller, Lessing, and Heine. No critical biography of the poet that has hitherto appeared in either Austria or Germany equals in scholarly comprehensiveness and charm of style the Frenchman Auguste Ehrhard's 'Franz Grillparzer: Le Théâtre en Autriche'; but many other notable monographs, such as those of Volkelt, Scherer, and Emil Reich, show that posterity has begun to ratify the judgment of Byron, who, in 1821, wrote: "Read the Italian translation by Guido Sorelli of the German Grillparzer—a devil of a name, to be sure, for posterity, but they *must* learn to pronounce it. With all the allowance for translation . . . the tragedy of 'Sappho' is superb and sublime! And who is he? I know him not, but ages will."

—Dr. Lessing has, in his critical estimate, not unwisely ignored the crude and dismal (for all its poetic diction) "Ahnfrau," Grillparzer's first and long his most popular work, which allied him throughout his life, in the opinion of the unthinking, with the "fate tragedians" of the school of Müllner and Werner. "Die Ahnfrau" bears the same relation to Grillparzer's "König Ottokars Glück und Ende" or "Ein treuer Diener seines Herrn" that Schiller's "Robbers" does to his "Wallenstein" or "Wilhelm Tell"; but the choice of the subject in Grillparzer's case was purely accidental, as it was not in Schiller's. Dr. Lessing's main thesis—the influence of Hegel on Grillparzer's philosophic and æsthetic theories and on his political attitude—is somewhat forced. The poet's caustic wit spared Hegel, as many of his epi-

grams testify, as little as, for instance, Richard Wagner:

> "Habe die Hegel'sche Philosophie überlebt,
> Werd' auch die Zukunftsmusik überleben";

and we can imagine with what scorn he would have resented Dr. Lessing's linking his name with that of Hebbel (whom he cordially disliked) as protagonists of the new ("collectivist") drama. In fact, the relation between Grillparzer and the modern German dramatists is not made perfectly clear, though chance has quite recently led Gerhart Hauptmann to dramatize, under the title of "Elga," Grillparzer's novel, 'Das Kloster bei Sendomir.' Our author follows pretty closely the most judicious current estimates of Grillparzer's work, particularly his Greek and Hapsburg dramas; although he assigns to "Des Meeres und der Liebe Wellen" a secure place next to "Romeo and Juliet." He sees Hegel's influence in "Weh' dem, der lügt" (Grillparzer's only comedy), and, most distinctly in his two latest works, "Libussa" and "Die Jüdin von Toledo." The essay is noteworthy as, in a sense, the tribute of an American university to the genius of Grillparzer, the most conspicuous, though perhaps not the greatest, of Austrian dramatists.

BOOKS ON ART.

Miniatures. By Dudley Heath. (The Connoisseur's Library.) London: Methuen & Co.; New York: G. P. Putnam's Sons. 1905.

Auguste Rodin: The Man—his Ideas—his Works. By Camille Mauclair. Translated by Clementina Black. E. P. Dutton & Co. 1905.

French Art: Classic and Contemporary Painting and Sculpture. By W. C. Brownell. New and enlarged edition. Charles Scribner's Sons. 1905.

Velazquez. By Auguste Bréal. (The Popular Library of Art.) London: Duckworth & Co.; New York: E. P. Dutton & Co.

Mr. Dudley Heath's book on miniatures is in more than one respect the best of several on the subject which the recent revival of interest in miniature painting has brought forth. From the historical side, Mr. Heath presents by far the clearest and fullest account we have seen of the derivation of the modern art of portraiture in little from the elder arts of illumination and missal-painting which gave it its name. The pedigree is made out clearly, from the earliest illuminated manuscripts to the miniatures of Holbein and Clouet, the fathers of the art in England and France. On the mooted question as to whether any of the so-called Holbein miniatures were actually painted by Holbein, Mr. Heath takes the affirmative, and there can be little doubt that he is right. Such contemporary evidence as there is is all in his favor, but the most conclusive evidence is that of the works themselves. Undoubtedly miniatures have been attributed to Holbein which he did not paint—miniatures painted before he came to England, miniatures painted after his death; above all, miniatures entirely unworthy of his skill. But a certain number of the little portraits of his period can have been done by no one else; they are as unmistakably his as is the wonderful Erasmus of the Louvre.

Most convincing of all is his own portrait in the collection of the Duke of Buccleuch. This is Holbein and by himself—doubt is impossible. It bears the inscription "H. H. An. 1543. Aetatis suæ 45," exactly the date and age inscribed on Vosterman's engraving, and the composition is identical with that of the engraving, only reversed—an indication that the miniature cannot have been copied from the engraving, while the engraving may well have been copied from the miniature. The most notable difference in the two portraits is that the face in the engraving wears a slight moustache which is absent from the miniature; but, considering the inferiority of the engraving at every point and its deformation of the features of the great artist, this may well have been an ineptitude of the engraver. The head in the painting is very like that in the early drawing at Basle, only grown older and graver, and it is the only portrait of Holbein in his later years that one can accept as credible, while in drawing and workmanship, to judge by the reproduction, it is such as no other man of his time could have made it. Mr. Heath does not go into this reasoning or mention the Vosterman engraving; he simply accepts the miniature on its face as an original Holbein. For our part we not only believe, unhesitatingly, that Holbein painted miniatures in England and founded the English school of miniature painting, but we believe that these miniatures are worthy of more study than has yet been given them for the light they are capable of throwing on the evolution of the master's style.

Mr. Heath is a miniature painter himself, not a mere collector or fancier, and his critical judgments are those of an artist who takes his art seriously, and who knows its methods and its resources; they are therefore of more moment than those of the ordinary writer on the subject, who merely reflects the prevalent taste of collectors. Being what he is, it is natural that he should heartily appreciate such a masculine genius as that of Samuel Cooper, not only a brilliant miniaturist, but a great portrait painter, and that he should refuse to join in the general enthusiasm for the rather flimsy cleverness of Cosway, whose vaporous prettiness is, for most people, the ideal of miniature art. Mr. Heath's technical knowledge enables him to point out, however, that Cosway's style was determined almost as much by the introduction of ivory as a ground for miniature painting as by his own temperament and the taste of his day. The painters on card or vellum had no such temptation to subordinate truth and force to the perfectly legitimate display of the beauty of their material, and Mr. Heath is entirely just to the real ability with which Cosway adapted his slightness of method to such display.

It is a pity that our author knows nothing, or says nothing, of the recent revival of miniature painting in this country. If his work had been purely historical, there would be nothing more to say; but as he gives specimens of contemporary work in England (and pretty poor work it is), one regrets the absence of some of the much better work that has been produced in America. The illustrations are, for the most part, admirable, and they are—a matter of importance—of the exact size of the originals. The illustrations in color seem unusually successful, and are a valuable aid to understanding the various styles of work. The book would be easier of reference if various details as to provenance, etc., were given on the plates themselves, or on their guards, rather than in an "Index to Plates." The plates are not even numbered, and when there is a reference in the text to a certain plate, one must turn back to this index and identify the picture wanted by the outline cut of it there given, then turn over the plates until one finds it—a long and annoying process.

M. Camille Mauclair professes a distaste for over-enthusiasm, saying, in the preface to his book on Rodin: "It is not so much my business to display abundantly the admiration which I feel, but which, no more than my friendship, shall induce me to turn my essay into a hymn of praise. Rodin himself is the first man to be wearied by some praises, and a just observation on his methods gives him much more pleasure. Like every man of high intelligence, he would rather be understood than praised." And again, "A study is asked of me, not a panegyric. When I have reckoned up the vast quantity of work, the maker's life, theories, talks, doings, and influence, very little room will be left for compliments." There is more than once a note of disdain for "Rodin's extreme admirers" and for dealers in "literary declamations"; yet when one has finished the book one is left wondering who the admirers can be that M. Mauclair considers more extreme than himself or more declamatory. Rodin's "statues are states of the soul," and the sculptor himself is "a representative being surprised at his own immanence," and "a sort of rock concealing shapes within it and embracing in its secret recesses immense crystallized arborescences." He is "the greatest living French artist, and one of the most complex and powerful movers of thought in modern art," who "influences the soul of a generation"—and so on for many pages. He surpasses Puget and Rude and Barye, and is, indeed, "supreme in the rich French school," which is not, however, so rich as we had imagined, for "Dujalbert, Chapu, Mercié, Frémiet, Saint-Marceaux, and Falguière are but sham great sculptors, nothing of whose work will last," while "the École group, from Paul Dubois to Barrias, Aubé, and Guillaume, is a mere example of pretentious insignificance." Finally, he is "a master and a prophet," and "the Michael Angelo of the modern world." For one who would "avoid any extravagant eulogy," this is pretty well.

In short, M. Mauclair is, what his other books have shown him, a violent partisan, who not only lauds to the skies everything which he admires, but damns with equal vigor everything else. He is not content that Rodin shall be reckoned a great sculptor and a forceful and original artist—he must be thought the only sculptor, and a profound thinker, a great poet, a prodigious intellect, as well. He is not content that other sculptors shall be pronounced relatively inferior to his hero—they must be contemptuously effaced that his hero may stand alone. Such a method is dangerous, and is apt to rouse antagonism in any reader accustomed to think for himself.

Fortunately, there is something besides extravagance of praise or blame in this book. There are long passages of explanation from which some idea may be obtained

of what kind of a sculptor Rodin is, of the nature of his ideals, and the reason of his methods. They are not always very clear or very intelligible, and, in the absence of opportunity to compare the original with the translation, one can only guess how much of their vagueness is the fault of M. Mauclair, how much that of his translator; but an attentive reader can glean a good deal. There are, above all, long quotations from Rodin himself—quotations which show him to us as he is, a man of vigorous temperament and immense vitality, but of no great intellectual clarity; a natural craftsman, with a genius for the manipulation of material; an artist who produces by instinct, and occasionally tries, rather ineffectually, to discover his reasons afterwards. Finally, there are the forty plates. It is natural enough, perhaps, that the work of an impressionist sculptor should be reproduced in impressionistic photographs, but one could wish for illustrations of greater clearness that should enable us to judge more accurately what the work is and how it is done. Still, these plates do help us, as far as they go, to understand Rodin, and, like the text of the volume, are in so far welcome.

It is refreshing to turn from M. Mauclair to Mr. Brownell, and to reread the chapters of 'French Art' which deal with Rodin. This "new and enlarged edition" is identical in text with the illustrated edition of four years ago, and there is, therefore, nothing new in it, but it is good to have it reprinted. Mr. Brownell is certainly a sufficiently ardent admirer of Rodin, and we remarked, in reviewing the illustrated edition, on the disproportionate amount of space allotted to that master; but, compared to M. Mauclair, he is coolness and impartiality personified. Mr. Brownell is, fortunately, capable of admiring many things, and of trying to understand more things than he greatly admires. His weakness as a critic of art is his lack of technical knowledge, and of any adequate conception of the dependence of artistic expression, and even of artistic thought, upon technical methods; his strength is a catholicity of temper and a great intellectual subtlety. His criticism is apt to strike an artist as marked by a certain aloofness from the concrete, as if it emanated from a disembodied spirit, but the intelligence which seems served by no human senses is a high and clear one. That there is a continued public demand for his books is a welcome sign that intellectual effort is still possible, and that intellectual pleasure is still enjoyed.

M. Bréal's little book on Velazquez lives up to the excellent reputation of the series to which it belongs. The author makes no attempt at elaborate technical criticism, like that of Stevenson, but he does succeed in giving a clear idea of the nature of Velazquez's genius, of what he was, and what he was not, together with all that is necessary of biographical information regarding an entirely uneventful life. He has no desire to write one of those "volumes on the paintings of the masters so complete and definite that they dispense with the necessity of seeing their works. . . . This volume is neither a treatise on æsthetics, nor an historical essay, nor a catalogue, nor even a guide-book. We beg the reader not to take it with him if he goes to see any of Velazquez's pictures. This little book is merely an invitation to the journey." This modest intention is admirably fulfilled. One gets such a notion of the quiet, impartial, unimpassioned, unimaginative, wonderfully true and beautiful works of the greatest of the masters of pure painting, that one is possessed with the desire to take the next steamer for Europe, and to go straight to Madrid without stopping for anything else.

But if one is placed under the spell of the great Spaniard's mastery, one is duly warned of the steps by which it was attained. There is a passage of some length, apropos of Velazquez's *bodegones*, which is so profitable for instruction that we cannot refrain from quoting it nearly entire.

"Velasquez is a perfect example of what dexterity and craftsmanship ought to be in a master, namely, the outcome of severe and protracted study. The painter who, later on, was able to indicate with a single touch—fleeting and decisive—a belt buckle, a sword hilt, the ribbon of a hoop, and the very life of a glance, began by meticulously elaborating portraits of pots and by patiently painting in every line of a model's grimace. Little by little, alone and by himself, he acquired and amassed the experience which is represented by a single trickle of paint in 'Las Meniñas.' Never has more audacious synthesis been produced by more careful analysis. This might furnish a subject of meditation for those young 'masters' who start by audacities which are all the easier for being unconscious. It is impossible to synthesize, it is impossible to epitomize (in painting), what one has not studied. If one begins by the end, one is in danger of ending by the beginning; and *if early works that are labored do not imply future mastery, early works that are masterly are the manifestation of an artist without personality.*"

The phrase we have italicised is worthy of being writ large on the walls of our schools of art for the benefit of those miscalled students who are so afraid of being timid that they dare not really study anything.

The quality of the English in our quotations shows sufficiently well that M. Bréal is quite justified in his note of thanks to the translator, Mme. Simon Bussy. Certain passages in which M. Bréal himself quotes from others, the original text being given in a note, confirm our feeling that Mme. Bussy is as accurate as readable. It is a genuine pleasure to come across such a workmanlike performance. The physical make-up of the handy little volume, with its flexible cover, is charming, but the illustrations make one regret the smallness of scale. Velazquez suffers more than almost any one from excessive reduction and from the shortcomings of process-work. Little besides the composition is visible in these small plates, and composition is not his forte. The inclusion of certain details, heads, etc., on a larger scale helps out somewhat, but not much. For those who cannot see the originals, the only even moderately useful substitutes are the large Braun photographs.

MORE FICTION.

Fond Adventures: Tales of the Youth of the World. By Maurice Hewlett. Harpers.

Veranilda. By George Gissing. E. P. Dutton & Co.

Constance Trescot. By S. Weir Mitchell, M. D., LL.D. The Century Co.

The Celibates' Club. By I. Zangwill. The Macmillan Co.

The Belted Seas. By Arthur Colton. Henry Holt & Co.

The Probationer, and Other Stories. By Herman Whitaker. Harpers.

In a preface to the story called "Brazenhead the Great," Mr. Hewlett declares that "a story is a story or verbiage," thus providing a standard whereby he may be judged. In some of his work at least, a tendency to verbiage is discoverable, but his latest volume is a volume of stories, splendid stories, full of action and passion, with an undercurrent of laughter, all carried off with great spirit and style. They are told in wonderful words, so apt and abundant. Like the words of the Bible and of Shakspere, they are living words, and, as they tell the stories, they also clothe them in rich, harmonious garments. In the days when our language seems to have become a slender, cold, tinkling stream, drying at the source, Mr. Hewlett's use of it restores our confidence and our pride.

The spirit of the tales and the letter are one, even as a good rider and his horse, and the identification of the writer with his themes is so complete that one thinks favorably of the theory of reincarnation. May not the souls of Boccaccio and Benvenuto Cellini, Falstaff and Romeo, have met, combined, and squeezed themselves into the body of a twentieth-century English story-teller? At all events, Mr. Hewlett gives us episodes which would have made the refugees from plague-stricken Florence forget their peril; quick, fierce brawls, such as the great silversmith delighted in; impudent, voluble swash-bucklers of Falstaffian quality; and lovers passionate and daring as Juliet's. Lady Saill of Ventadorn, who wore a jewelled belt with the "Heart's Key," had many lovers. Three of them were bad, revengeful men, who burned Ventadorn because she had fooled them, and drove her forth in a single garment, and mocked her. But a true lover awaited her—"Guillem of Nantoil, a poor minstrel with a cropped head, meek eyes, and smooth face," who, with all his humility, knew that he could turn the key and capture Saill's fierce heart. When she had been dragged in the dust and begged her bread, his hour came.

"Early in the morning they took the road in peace; a battered soldier and his drab—who should hurt them? The primroses were out in the banks, in the meadows cowslips nodded their heads, jonquils and lady-smocks. The spring was in, earth quick with it. Nantoil was burning that day, but in the wood in the valley the doves sang clear and long. Saill put off her slippers and cooled her feet in the water; she let down the golden race of her hair and threw her head back to shake it free. As Guillem saw that proud, fine face, fronting, unashamed, the sky, his love leaped hotly in him, rebuking him for his doubt. He prayed his old prayer, 'Hey, Madame the Virgin of Ventadorn, give me the Heart's Key.'"

The foot-page, Percival Perceforest, was found weeping for Lady Mawdleyn Touchett in Winchester Cathedral. He was found by Capt. Brazenhead, "a lean man of six feet two inches, of inordinate thirst," who was at the moment attached to Mr. Jack Cade, who aspired to be King of England, yet sorely needed a stripling of wit and learning to write his dispatches for him. Brazenhead, justly called the Great, struck a bargain with Percival, and, after adventures both grave and gay, each got his reward.

Buondelmonte de' Buondelmonti was a

"pleasant, handsome man, rich, young, a good fighter, very splendid in his tastes." He was also frank and just; and when he wished to break his contract of marriage with Monna Cunizza, closely allied to the great house of Uberti, he walked in among her kindred alone and unarmed, courteously saluting the company at large, and spoke:

"I have given reasons to Lambertuccio [Cunizza's father] which I hope he understands. No doubt he has told them to you. Now, in the presence of you all, his kindred, I pay the forfeit in which I stand engaged and will take my bond again. Further satisfaction I offer him for the honor of Monna Cunizza—namely, the fifty florins which I should have laid down for Morgengabe. This seems to be justly her due, since I believe from my soul every good thing of her. So I pay it now in your sight."

Unfortunately for himself, Buondelmonte had reservations. When the Uberti found out that he was already on with a new love, they lay in wait for him at the bridge end by the Church of San Stefano, and dreadful things happened.

In "The Love Chase" there are two fervent, faithful lovers, and the lady, coldly estimated, is worthy of neither. Emilia Fiordispina, La Colombina, had innumerable lovers, silent and outspoken, "A mysterious, slow, smiling little creature," Simone della Prova, marked her for his own when she was only twelve, made her swear eternal faith, with scowls, kisses, tears, oaths. Then he rode away to the serious business of war, and several years later sent her a ring to let her know that he had not forgotten, and that (when convenient) he was coming to Milan (where Emilia was maid of honor to the Duchess) to marry her. By this time he was known as the Black Dog of Citadella, and at no court in Italy would a message from him be treated lightly. He sent the ring by the Cardinal Guido Gonzaga of Milan, who told his secretary, Nello Nelli, to give it to La Colombina. The complications that ensued were tremendous, for Nello was a poet and had never been really in love. Nello is an admirably represented, typical figure of the Italian Renaissance, romantic, ardent, and brave, yet learned and of critical taste. As a lover he is incomparable, and in every aspect charming.

The women who take part in the "Fond Adventures" could be found guilty of almost any crime by a respectable modern jury composed of their own sex; on the other hand, "Not proven" is the most severe verdict that could be expected from good men and true of any race or time.

No novelist was ever more the slave of his temperament than was the late George Gissing. The life of the lower middle class in England, which he represented in most of his novels, is not absolutely without light, or hope, or joy; yet Mr. Gissing believed it was utterly mean and sordid. He hated it, resented being bound up with it, yet could not separate himself from it, and was driven to write book after book to express his contempt, almost loathing, for the social order of which he was so intimately a part. Novels written under the stress of any sort of emotion are likely to be strong and impressive; Mr. Gissing's were among the most impressive and most unpleasant of his time. His posthumous novel, 'Veranilda,' fails because it is only a product of intelligence and of scholarly interest in a remote period of history. Mr. Gissing could not identify himself with a Roman or a Goth. The feelings and motives of ambitious men playing a great game were not within his range. He could know about kings and senators, their wives, mistresses, daughters, and slaves, but the knowledge left him unmoved; he could not understand and detest them as he understood and detested suburban Londoners balefully scowling at their evening tea and jam because happier mortals were, at that moment, in terrestrial paradises, quaffing champagne. Besides being cold and formal, 'Veranilda' is a rather incoherent tale. The beautiful Goth, of royal descent, is seldom before the reader, being most of the time immured in a convent, the victim of obscure intrigues. Basil, her lover, a son of the Anician family, is not a lover to be proud of, for his lamentations over the loss of Veranilda take time that had been better spent in trying to discover her retreat. The Greek Marcian, a double-dyed traitor, really did more than Basil to win Veranilda, though in other respects he is undeserving. The most interesting parts of the book are the descriptions of the desperate condition of Italy at the time, and of Rome, fallen from her greatness, with starving people cringing before a dissolute nobility.

Mr. Frederick Harrison's preface to 'Veranilda' shows more sympathy with a friend than literary judgment. Mr. Gissing's life appears to have been a singularly sad one, offering many excuses for the bitterness and pessimism of his works.

The scene of the story of 'Constance Trescot' is in St. Ann, a small Missouri town; the time, shortly after the civil war. When Major George Trescot of Boston accepts the position in St. Ann of agent for a Northern landowner, charged to evict a number of squatters, a stirring drama, probably a tragic one, is foreseen. After a short acquaintance with the Southern community, Trescot knows that it would be wiser to conciliate the long-established occupants of Mr. Rufus Hood's lands than to insist on turning them out; but, unable to persuade his employer, he tries a test case, wins, and is immediately shot dead by the defendant's lawyer, Mr. Greyhurst. The sympathy of the community is, of course, with the murderer, so the law ignores his crime. The drama is a very fitting one for development of the character of Catherine Trescot, who may be briefly described as a woman of blood and iron. She had a strong intelligence and strong passions, and in pursuit of a desire could sweep away any obstacle less arresting than the swift, sure bullet of Mr. Greyhurst. Her passion of love for Trescot made him as clay in her hands, and her passion of hatred for Greyhurst, after the murder, devised tortures of devilish ingenuity. Mr. Kent, reviewing events, said, "Perhaps George Trescot was fortunate," an opinion that readers of the novel can hardly fail to confirm.

Constance Trescot is not a monster, but just a perfectly selfish woman, which is, perhaps, about the same thing. After her husband's death she becomes a monomaniac, but is none the less responsible for her actions. Dr. Mitchell has had ample opportunity to observe many women similarly constituted, and his delineation of Constance is as clear and assured as if she had been the subject of notes. By way of excuse or explanation, he lays stress on the contempt for religion inculcated by her uncle and guardian, Mr. Rufus Hood, but we feel that religion could only have made of her a leader of inquisitions, a slayer of innocents under suspicion of cherishing a faith that was not hers. Education has really very little effect on such women as Constance Trescot. They are born armed with weapons fitted for their purpose in life, which is always to get what they want. These weapons are dangerous, but not necessarily unpleasing. Constance, cajoling a squatter, sympathizing with vanquished Southerners, making love to her husband, appears amiable and engaging, but she knows well that her bullying methods, so successful in coercing her uncle and sister, cannot bend all the world to her will. The less important characters in the novel are well drawn, especially that of Rufus Hood, a tiresome old man, at once irresolute and obstinate and full of self-conceit. Dr. Mitchell describes St. Ann and its impoverished and bereaved inhabitants sympathetically, and revives for the modern reader the great emotion which long ago convulsed both North and South.

The 'Celibates' Club' is a collection of extravagant tales and character sketches which probably first saw the light in a comic paper. Each separate chapter is good enough for such a medium of publication, but the book is no better than an exhibition of the journalistic talent for writing up exhaustively from the slightest foundation of facts or fancy. Mr. Zangwill's way of writing up a subject is very superior. He is extraordinarily fluent; he can do almost anything with words—make puns, paradoxes, epigrams, striking phrases, run on in an amusing fashion long after his subject or suggestion is buried out of sight and forgotten. Sometimes he runs off into unmitigated nonsense, and then, except for the purposes of the comic paper, he becomes an unmitigated bore—a fate that frequently threatens in his giddy flights provoked by the conception of a Bachelors' Club and an Old Maids' Club.

The nearest discoverable thing to a motive in his madness is an intention to satirize the general modern passion for notoriety, finding most of his material in the world of actors, musicians, painters, and writers for the papers—a world that can hardly take offence at criticism which so obviously includes the author. All he says about this world expresses intimate acquaintance and personal identification with it, and a cheerfully cynical appreciation of life as he sees it, and lives it. Among his best sketches is that of Harry Slapup, a comic singer, who, quite against his will, was converted into Israfel Mondego, a warbler of sentimental ditties and darling of the drawing-room. The most amusing candidates for the Old Maids' Club is Frank Maddox, a celebrated critic of all the arts. "Few critics," says Mr. Zangwill, "possessed such charm of style and feature as Frank Maddox, who had a delicious retroussé nose, a dainty rosebud mouth, blue eyes, and a wealth of golden hair." The opening of the lady's discourse on her profession gives the tone of the best bits in the book:

"You see, to be a critic it is not essential to know anything—you must simply be able to write. To be a great critic you must simply be able to write well. In my omniscience, or catholic ignorance, I naturally looked about for the subject on which I could most profitably employ my gift of style with the least chance of being found

out. A moment's consideration will convince you that the most difficult branches of criticism are the easiest. Of musical and artistic matters not one person in a thousand understands aught but the rudiments; here, then, is the field in which the critical ignoramus may expatiate at large with the minimum danger of discovery. . . . Only say what you have got to say authoritatively and well, and the world shall fall down and worship you. The place of art in religion has undergone a peculiar historical development. First men worshipped the object of art; then they worshipped the artist; and nowadays they worship the art-critic."

The tragic note is generally dominant in sailors' yarns, but Captain Thomas Buckingham, who sailed 'The Belted Seas' for thirty years, was a humorous philosopher, and his adventures exhale the spirit with which they were met. The Captain never steamed, he sailed—clipper ships and coasting schooners; thus enjoying the advantages for romance of the more primitive method of traversing the deep. A sailing-ship was always an irresponsible rover; she scorned the fetters of a schedule; she sailed at the convenience of the tides and arrived at the pleasure of the capricious winds; between leaving one port and making another, the unforeseen was pretty sure to happen. It happened so often to Captain Tom that his experience may be said to have embraced everything except what had been anticipated and arranged for. He became familiar with hurricanes, earthquakes, and tidal waves, assisted at South American revolutions, traded and fought in the South Seas, and sat with a thousand bronze Buddhas in the shade of the Shway Dagohn pagoda at Rangoon. His pretty constant companions, the men who, as he says, stood by him most, were a solace in vicissitude, for they had a sense for life as keen as his own, and always supplied him with food for reflection. Three of them failed to make the home port at last, for "one was a miser and smuggler, and got himself hung; and one was a thief, and died of a split wishbone on what he called a 'throne'; and one was a fighter and gambler and poet, and he had a heavy fist and he turned remorseful into a Burmese monk." Captain Tom's description of his eccentric mates is occasionally exaggerated to the point of caricature, and his style is inconsistent, wavering between the style of a plain mariner and that of a clever, versatile, even brilliant writer.

Mr. Whitaker's tales of the Canadian Northwest show that he is familiar with life on prairie farms, in remote fur-trading stations, in Indian camps, and that he has hungered and thirsted in wilderness places. Some of his stories are thrilling, some humorous, some tame, and the people are selected from the westward-moving advance guard of approaching settlement and remote civilization. They have many difficulties to contend with, and one indomitable enemy, the snowstorm—the blizzard—which, according to Mr. Whitaker, would seem to rage all the year round. They are strong, resolute people, not always careful to observe moral law or social order, yet rarely requiring attention from the mounted police. In narrative Mr. Whitaker has a good deal of manner—too much, and not always his own. There are suggestions of Bret Harte and Owen Wister, and frequently (instance "A Drummer of the Queen") a rather close reminiscence of Kipling. The author has enough of original quality to go his own way without regard for models, and he will probably write better when he has forgotten the books that have influenced him. The volume seems to us to be poorly named, for "The Probationer," though the first story, is far from the best, and not characteristic of the rest of the contents.

Greek Thinkers. By Theodor Gomperz. Vols. II.-III. Translated by G. G. Berry. New York: Charles Scribner's Sons. 1905.

The first volume of Professor Gomperz's 'Griechische Denker' was translated by Mr. Laurie Magnus of Magdalen College, Oxford, and was reviewed in these columns on its publication in 1901. The second volume of the original was published in 1902, and we have before us, in two volumes of considerable size, its translation by Mr. G. G. Berry of Balliol, who carries on the task that Mr. Magnus had not the leisure to complete. The three English volumes, whose larger type and better paper account for the expansion, and make them much more attractive than the original, will now appeal to a far wider circle of readers here and in England than could be reached by a history of Greek philosophy in German. Not that the book is addressed to the general reader. In spite of the singularly refreshing absence of footnotes, it is of the sort that even the specialist must read with all his wits about him. But the advantage of Gomperz's arrangement is that the student of philosophy can read straight ahead, undistracted by the *Literatur*, while the classical specialist who desires, as he often will desire, to consult the references and the authorities for some of the author's statements, will find in the notes at the end of volume iii. a brief defence of the debatable opinions and a good deal of useful bibliography.

Mr. Berry, like Mr. Magnus, has managed to give his translation the air of real English, and his version is on the whole a great improvement on the curiously abrupt and disjointed style of the original German. The *pièce de résistance* of these two volumes is, of course, the chapters devoted to Plato, for whom is reserved the third volume and more than a third of the second. The treatment of Aristotle and his successors is postponed to a later instalment. It is his moderation, his avoidance of extreme views, that makes Professor Gomperz so satisfactory a critic. He has no taste for the exaggerations and eccentricities of modern scholarship, and you will never find him misinterpreting or ignoring the text of a Greek author in order to make out a case or support a paradox. Nor does he range himself with the destructive critics who have left not one stone upon another in their determination to accept nothing in the way of evidence unless they can find it in Thucydides or Aristotle, who alone are regarded as mysteriously infallible. Such critics will reject every anecdote that has grown up about the great names of Greece, and allow no evidence that is not derived from the writer's own works, or at least such of his works as they concede not to have been written by others. All that they leave to a writer's personality is his date, if it happens to be above suspicion, the name of his father, which seems to have a mysterious value for the historians of Greek literature, and, if he be an Athenian, that of his deme, which somehow sticks to him because it conveys nothing to the mind. Gomperz is far from reducing his Greek thinkers to so chilly and colorless an outfit. On the contrary, he would like to give you a full-bodied presentment of each man as he lived, establishing the details of his daily life by the sort of divination which may be allowed to a scholar whom you at least cannot refute, because he never lets his imagination play about the texts themselves; which is more than can be said for many of the critics who have discarded all the personalities as unauthenticated by a contemporary.

But we can imagine their distress at Gomperz's lively character-sketch of the Athenian man in the street and his monologue about Socrates, or the highly colored picture of Plato going for a walk in Syracuse, sighing at the sight of the stone quarries, with their hideous associations for an Athenian, or listening to Sophron reciting on a street stage. Gomperz is, indeed, so eager to fill in every detail that he cannot accept our blank ignorance as to Plato's love affairs, and accordingly conjectures that Dion the Sicilian philosopher was the object of his passionate affection. But all this is the froth of Gomperz's narrative, which can be blown aside if one prefers; there is no doubt as to the sound quality of the draught beneath.

He devotes a chapter to each one of the more important Platonic dialogues, pointing out its significance for the development of Plato's thought, and its relation to the rest. In the matter of chronology he is far from what he calls the "reckless exaggerations" of Lutoslawski, who, using his "stylometry" and his conception of the growth of Plato's logic to support each other, did not hesitate to ignore or misinterpret such passages as were clearly against his arrangement. But Gomperz does on the whole arrange the dialogues in the order adopted by Lutoslawski, with certain very important reservations. He agrees with the statisticians in placing the "Phædrus" after the "Symposium," but rejects as visionary the attempts of such critics as Krohn or Pfleiderer or Lutoslawski to detect "the true order of the Books of the 'Republic'—an order differing from that in which they appear—and to represent the work as a conglomerate of disparate fragments" (iii., 51 ff.). On the vexed question of the ultimate fate of the doctrine of ideas, Gomperz is certainly more cautious than Lutoslawski, who, in his eagerness to eliminate the self-existent ideas from the later dialogues, overlooked a clear allusion to them in the "Timæus." But he goes too far when he concludes, from the absence of allusion in the "Laws" to dialectic as an important branch of education, that Plato is no longer under "the spell of classificatory dialectic, of the rage for division which was so strong upon him in the 'Sophist,'" and that both the doctrine of ideas and dialectic became for him "exclusively subservient" to the understanding of plants and animals. There is nothing in the later dialogues to show that Plato "shivered in the heaven of his ideas," and Gomperz probably fails to distinguish between eristic and dialectic when he detects a distrust of dialectic "even in the 'Republic.'"

Every Platonic scholar has his mania,

and we should say that the weakness of Gomperz is his tendency to drag in the Cynic Antisthenes. In almost every dialogue he sees some sidethrust of Plato's at the great Cynic who had taken so different a line from his own in the development of the teaching of Socrates. In such a passage as "Sophist" 251 there is indeed a pretty obvious allusion to Antisthenes and his followers, but Gomperz has no right to draw such an inference from, *e. g.*, "Phaedrus" 229. It is refreshing to find that he rejects none of the dialogues that are condemned by the extreme critics, and, against Zeller and Wilamowitz, regards the "Menexenus" as Platonic. For one of the few misleading statements in the book we may point to page 284 of volume iii., where we read that "it may now be taken as proved that Xenophon's 'Symposium' followed its Platonic namesake." This is by no means the generally received opinion.

The proof-reading of the English translation is far from perfect. There is a good deal of misspelling, and on page 238 of volume iii. two lines are transposed so as to make nonsense. The translator has followed Gomperz in spelling the name of Xenophon's son "Grylus"; we do not know that there is any authority for this use of a single *l*.

Talks in a Library. By Laurence Hutton. G. P. Putnam's Sons. 1905.

This book contains the last "copy" produced by the late Laurence Hutton. The "talks" were dictated to Miss Isabel Moore last year, and were revised by Mr. Hutton before his death, the book being printed after that event. It is a miscellaneous collection of literary and personal gossip, a good deal of which is new and most of it decidedly interesting. In a general way, it tells the story of Mr. Hutton's life, of his first adventures in journalism, of his devotion to the stage, of his many warm friendships with actors and literary people, and of his wanderings in other lands. Possessed of a strong social instinct and an admirable sense of humor, he was a charming companion, and for many years his house was the scene of those literary and artistic gatherings whose recorded speech—if it ever could be recorded—would be something in the nature of an epitome of the best literature. But, unfortunately, Boswells are even scarcer than Johnsons. We find Charles Greville constantly regretting that he cannot remember in the morning the brilliant things that Sydney Smith or Macaulay had said the evening before. George Russell and Grant-Duff are excellent reporters, but more frequently of light and witty than of weighty and valuable talk. Apparently nothing is more evanescent than the wisdom of good talkers; and books like the present, which preserve some fragments thereof, commend themselves to those who occasionally hear good talk and are annoyed by their inability to remember it.

A good deal of space is given to the history of Mr. Hutton's collection of death-masks—humorously called his *Scullery*—now in the Library of Princeton University. It appears that many of the most interesting masks were found in some ash barrels in Second Street, where they had been thrown away by people ignorant of their value, and that they had originally belonged to George Combe the phrenologist, and had been used by him during a course of lectures here in 1838. Probably one of the most unfailing sources of happiness in this life is the collector's mania, and Mr. Hutton possessed it in liberal measure. As the years went on, he was constantly adding to this collection of masks, and at the same time was making other collections of memorabilia that interested him.

Many good things might be quoted in order to show the quality of the book, but perhaps one abbreviated story will suffice. Arthur Brooks (brother of Phillips Brooks), when a boy of seven or eight, was sent with a note to Miss Longfellow, and was admitted to the house by the old poet, who talked to him while he waited for his answer. The boy said he was reading 'Jack and the Bean-Stalk,' and the poet said he had not seen it for years and should be glad to see it again. The youth was seized with a sudden impulse, rushed home to get five cents of his *own* money, bought the book, and presented it to the poet, who received it with becoming dignity, and showed as much gratitude as if it had been a first-folio Shakspere.

A Treatise on the Incorporation and Organization of Corporations. By Thomas Gold Frost. Boston: Little, Brown & Co. 1905.

Mr. Frost's volume deals with "business corporations," and nearly two-thirds of it consists of a "Synopsis-Digest" of the general incorporation acts of the several States, and forms for drawing charters. The treatise proper consists of some two hundred pages devoted not only to "drafting the charter," "procuring the charter," "organization of corporations after incorporation," and "issuance and payment of capital stock," but to "legislative control over domestic corporations" and "legislative control over foreign corporations." These last chapters constitute a wide field by themselves, and we accordingly find that such a subject as the Police Power is very cursorily dealt with in three pages.

The book is mainly valuable as a vademecum for incorporators. It teaches the whole important art of incorporation in a very satisfactory way, and without an excess of citations. Of most general interest, perhaps, is what the author has to say about "capitalization" of corporations, a subject which is always engaging the attention of courts, legislatures, and the press. This is contained in his fourth chapter, on the "Issuance and Payment of Capital Stock." His interesting account of this vexed topic shows one thing conclusively—that, up to the present time, no means has been found by the State of guaranteeing to those who deal with corporations that what may be called the realizable capital of a corporation shall correspond, dollar for dollar, with the nominal capital, except in the form of a requirement that the capital stock shall consist of so much money, or money's worth, actually paid in. This requirement, however, while it can be enforced in the case of corporations like banks, is wholly inconsistent with the great principle which underlies our modern corporation system—*i. e.*, that of enabling all-comers to incorporate everything in the nature of a business venture which they may wish to bring forward. Hence we are told that, of late years, courts of high standing have adopted what the author calls "the speculative value rule."

"This may be defined as that rule whereby a corporation is permitted, in issuing its capital stock as full-paid and non-assessable in exchange for either real or personal property, to appraise the latter at its *potential speculative value*, looking towards its future development rather than at its present intrinsic value."

We commend the chapter not only to the intending incorporator, as replete with valuable instruction, but to the student of the science of government, who will find in it food for a great deal of thought. If a well-recognized function of the State, such as that of supervising the capitalization of business corporations, can become substantially atrophied in fifty years, would it not be better to give up all pretence of supervision, and let people capitalize all speculative enterprises at any figure they please? What is the "speculative value rule" applicable to a "Keeley-motor" secret, a process for extracting sunbeams from cucumbers, or a Venezuelan railroad "concession"?

William Cullen Bryant. By William Aspenwall Bradley. (English Men of Letters.) The Macmillan Co. 1905.

Mr. Bradley's affair in this volume is naturally one of critical appraisal and interpretation rather than of documentary biography. Bryant was but a parsimonious and infrequent letter-writer; and, despite the seeming antinomy of his poetical and journalistic pursuits, he was of an exceptional single-mindedness. Hence Mr. Godwin, in his admirable two-volume Life, had little difficulty in rounding up pretty nearly all the vital facts and documents; and the few that eluded his net, or proved too small for its meshes, were readily caught by Mr. Bigelow. Mr. Bradley offers practically no information that was not contained in Godwin and Bigelow, nor does he attempt to present the facts in a novel light. He has wisely contented himself with the codification and arrangement of them. He has constructed a narrative of excellent ordonnance, and, by keeping the imaginativeness of his man consistently in the foreground, contrives to give the reader an uninterrupted impression of the inwardness of Bryant in his character of poet. So, while his story lacks something of the detailed verisimilitude of his predecessors', it does present a view of Bryant the poet that is, perhaps, a little more integral and impressive; and, whether consciously or not, he has minimized the frigidity and emphasized the Washington-like quality of the man—"Cold but to such as love distemperature."

On the critical side, Mr. Bradley owes little to his authorities, and is at his best. He steers a happy mean between the obtuse detraction and the too enthusiastic rhetoric, to which Bryant, even more than most American poets, has been subjected. His concern is less with the artistic quality of Bryant's poetry than with its imaginative background and spiritual motives. These are abstract considerations, and Mr. Bradley is not as yet perfectly master of the difficult art of putting abstractions concretely. At times his thought is a little elusive, his style too even in its flow, too seldom visited by the vivid word; yet his criticism in the sum is penetrating and just. No one has yet written at length of Bryant with a firmer

hold on the American origins of his poetry or a wider perspective of general literature.

The Puritan inspiration of Bryant's poetry has long been evident, but Mr. Bradley shows clearly how he presented the wholesomer, saner side of Puritanism, and so afforded a natural and needed relief to the immortal exhibition of its tragical side in the romances of Hawthorne. Even fresher and more satisfying to a lover of Bryant's poetry is what Mr. Bradley has to say, in a heightened passage near the close of his book, of Bryant's relation to poetic impulses older than the Puritan:

"And somehow, too, whether it is the result of his classical studies in his youth, or of a more fundamental and deep-lying kinship, Bryant seems even to summon up voices of a more ancient poetry, solemn and oracular in the deep forest shades, pensive and pastoral on the sunny slopes. The pagan strain that we have found in Bryant echoes Virgil no less than Lucretius. In his love of all things beautiful, in his religious regard for nature, as well as in the pervasive sadness for the tears of things which interpenetrates his verse, the poet of New England is not so remote from the Mantuan as from many poets of his own day. His poetical acceptance of those traditional feelings concerning nature which formed part of the inherited religion of his race, even while his mind was weaned from the orthodox dogmas of its belief, is like Virgil's also. It is not so much that he consciously employed these as poetic material, as that they were in his blood and fused inseparably with the stir of a life within him that was older than his individual life. Hence the primitiveness of piety in much of his verse, its elemental quality. The suppliancy with which he bows before those mighty powers of the universe in which the divine presence is revealed is not reasoned, but instinctive. Thus it mirrors the primal religious trend of mankind, and gives it through art a new hold upon the spirit."

It is easy enough to disagree with Mr. Bradley in matters of inference and interpretation. Massachusetts, for example, in the War of 1812, with her privateers sending hundreds of fat prizes to Salem harbor, was scarcely so unanimously absorbed in an ideal reprobation of the war as he would make her out. Nor is it possible to go all the way with him in dispraising (for the greater honoring of "Thanatopsis") so memorable a poem as Blair's "Grave," or in holding Bryant to be, "save Poe," "the most imaginative of all our poets." The author of "Thanatopsis" and "To a Waterfowl" certainly never had the deep-flashing imaginative insight of Emerson, or the gift of glamourie, of visualizing unapparent realities, that Lowell knew in his youth and never wholly lost. Yet Bryant's imaginative vision of the symbolical life of Nature was the steadier, within its range, and his poetic workmanship was firmer, of a more enduring perfection. It may very well be, as Mr. Bradley hints, but doesn't quite like to say right out, that the lapse of years will leave as many of Bryant's pieces untouched with caducity as of any American poet.

Wasps, Social and Solitary. By George W. Peckham and Elizabeth G. Peckham. With an introduction by John Burroughs. Illustrations by James H. Emerton. Boston: Houghton, Mifflin & Co. 1905. Small 8vo, pp. 311, 50 figs.

This is an altogether delightful little book, summarizing a series of observations that extended through a series of years. It is impossible to watch the action of a colony of wasps, or of even a single wasp, for any considerable period without being impressed by the energy displayed and the strictly business-like attention to the work in hand. When the observations are carried on for several seasons, and specific individuals are followed for hours, as the Peckhams have followed them, it is natural that respect for the waspish abilities should increase. The charm of the book is in the directness with which the story is told, and in the obvious sympathy manifested by the authors with the struggles and aims of the active little nest-makers. Great stress is laid on the fact that each wasp is an individual, and, as such, unlike every other even of the same species: "The one pre-eminent, unmistakable and ever-present fact is variability—variability in every particular"; and as to the effect of this, when strongly marked: "The others, the conservators of old usages and customs, are the majority, the crowd. Yes, but is it not always the strong-minded few that direct the destiny of a race?"

An interesting fact brought out is the remarkable power of localization possessed by wasps, and the amount of variability shown in its exercise. Some will make a thorough study of the surroundings of their nest after completion, and will go to it unerringly thereafter; others are much more careless, and find difficulty in locating their home every time they return to it. As between species, the more excitable and nervous types make a great fuss over every act in their housekeeping, and sometimes spend hours in discovering the burrows they had labored to conceal from other eyes only. The method by which these excavations or cells are closed and concealed is told in great detail. It appears that some wasps actually make use of small pebbles to firm the soil over the opening before covering it with bits of vegetation to make it undistinguishable from the surroundings.

While the book is engagingly written, it is also scientifically accurate. Every species referred to is specifically determined, and every observation is so clearly recorded that it carries conviction; the facts are stated as they appeared, and not to prove a theory. It follows quite naturally from what has been already said that the Peckhams do not believe wasps to be insect automata, whose every act is a manifestation of a blind instinct. That instinct (or inherited experience) is the guide, is admitted, of course; but the application of this guide to the special surroundings is a manifestation of intelligence. Were instinct alone involved, all specimens of a species would work equally well; as a matter of fact, some are stupid and others bright; some attend with painstaking care to every detail of their household affairs, others will make a cell, get it all ready to be stocked, and cap it in apparent forgetfulness of the purpose for which it was constructed.

The bookmaker has done his work well, and the index is adequate. The drawings are mostly suggestive, but in some cases dreadfully out of proportion, the wasps appearing to equal in length trees that look from twelve to eighteen inches in diameter!

Scientific Fact and Metaphysical Reality. By Robert Brandon Arnold. Macmillan. 1904.

Perhaps the less one knows of philosophy, the more one will find in this book. In reading it one is now and then reminded that the author is an adherent of Bradley. The volume is about the size of 'Appearance and Reality,' and its page has somewhat the appearance of that famous essay. It further reminds one of Bradley by the many things it pronounces "obvious" which few would discover to be so of themselves. The work has a method, too; or so it informs us. The author is so thoroughly acquainted with the Absolute that we cannot think of questioning what he has to say of Metaphysical Reality, but he is by no means at home with Scientific Fact. His misunderstandings of the many scientific books he seems to have read or dipped into, are surprising.

We have carefully selected for examination a single paragraph, to be treated indulgently, if so we may convey a sufficient idea of what the whole is like. It fills two pages and a half. The subject under consideration is immortality, which may be taken as indicating the relation of the work to "Scientific Fact." The writer begins by telling his reader that "a small cyclonic eddy sweeping along a road"—in short, a whirlwind—may, after the lapse of "a few minutes," "not contain a single material particle which was present in it" before; and he suggests that the identity of a "human personality" ought to be conceived as analogous to that of the whirlwind. To support this, he remarks that "it is decidedly inaccurate to describe" "conscious manifestations" "as dependent on a particular formation of molecules in the brain," since the true "correlation" is between "mental phenomena" and "cerebral changes in form and activities." For the "stream of consciousness observed in introspection should be regarded as the energy aspect of our being and of the universe," provided energy be understood in a generalized sense in which it covers more than mere physical energy—a generalization which is at all events indispensable to save the physicist from falling into contradictions. In short, "our view may be put thus: all evidence tends to show that the organism is one. Yet we have the clear distinction of body and mind giving rise to different sciences, physiology and psychology. The solution seems to lie in the inevitable inadequacy due to our evolutionary and limited point of view, for which certain aspects of the universe must become apparent before others, and hence all the possible ground of our apprehension is prematurely occupied. Psychology is barely fifty years old, but already is becoming psychophysics. We stated earlier that mind *is* matter in certain combinations transcended. It would perhaps be more accurate to say that in proportion as the universe is apprehended from a more comprehensive standpoint, it displays what is to us the mental aspect more plainly."

Since accuracy is here in question, what accuracy is there in saying that "all evidence tends to show that the organism is one"? It is difficult to understand what is meant by saying that psychology is barely fifty years old (which would mean either that Lotze, Bain, or Spencer originated it, for it would be too absurd to attribute its paternity to Volkmann von Volkmar or even to George), while in the same breath saying it is now becoming psychophysics; for surely there has been no work on psychology more purely psychophysical than Wundt's 'Vorlesungen über die Menschen- und Thiersee-

len,' which appeared in 1863, therefore almost at the birth of the science, according to Arnold. If we remember rightly, Tyndall likened thought to a wave, as a form that is propagated and has a sort of identity, and yet is not matter. It was probably that comparison which has suggested to Mr. Arnold that a person is something like a vortex. But anybody who is competent to draw a simple inference from the testimony of his two eyes can see that a vortex is entirely different from a wave, being a portion of fluid matter, and not a mere form like a wave, which leaves a floating chip behind and does not carry everything along as a whirlwind does. It is not true that its particles are constantly being exchanged for others like the particles of a wave. But such is the representation of 'Scientific Fact' throughout the book.

Mediæval Civilization: Selected Studies from European Authors. Translated and Edited by Dana Carleton Munro and George Clarke Sellery. The Century Co. 1904.

This little volume, which two professors of the University of Wisconsin have prepared with praiseworthy care and good judgment, adds another to the increasing number of aids to historical instruction. It contains selections, not from contemporary authors, but from the writings of reputable moderns, whose work may be assumed to rest upon a thorough knowledge of original material. They have been translated and edited with considerable freedom to illustrate specific points of interest in the whole field of mediæval study, from the fall of the Roman culture to the beginnings of modern times. So far as the choice of the selections goes, there is little room for fair criticism. Every teacher would make his own choice, and his own is the best for him. The claim of such a book as this on the teaching world is that it offers something useful to a great variety of schools and a wide range of capacity in teachers, and this claim is well sustained by the present volume. It may fairly be said that a pupil who should read understandingly all the selections here contained, would gain no inconsiderable hold upon many of the most striking aspects of mediæval life. The real question is: How far is it to be expected that a young pupil should read the book with understanding? He could do this only under the direction of a teacher who could explain to him the thousand allusions to things he could not of himself comprehend; and this raises the further question whether such a teacher would be satisfied with the scraps here offered when he might lead his pupil to the full table of contemporary writings, or at all events to the abundant dessert of the secondary writers here carved for his handier service.

In making these queries we are not criticising the merit of this Wisconsin volume; we are only speaking of it as representative of a tendency in modern education to get along with bits instead of requiring that long and patient "reading" in books of real importance whereby alone a permanent and definite impression can be made on the young student's mind. The editors frankly defend their work on the ground of insufficient library supply and the ignorance of students in the languages of modern Europe. These are sad confessions, especially when we note that of the thirty-two selections here given all but three seem to be from French originals, and when we consider how very little time rationally spent would enable any student to read enough French to handle the books from which these bits are taken. The danger is, and every teacher knows how real a danger it is, that we shall become satisfied with these apologies for books, and relax our zeal in securing adequate supplies of valuable originals and adequate instruction in the means of reading them. In the haze of our pedagogic atmosphere two great truths remain fixed: that very few students will do anything they are not expected to do, and that the great majority of them can be led to immensely greater achievement simply by expecting it of them. Meanwhile, let us be glad that as good men as our editors are willing to lend a hand in supplying crutches to the lame, and join them in what we are sure is their hope, that the time will come when their patients shall learn to walk alone.

The Forms of Public Address. Edited by George P. Baker. Henry Holt & Co.

This is a novel venture in the field of rhetoric, or English composition. The author is assistant professor of English at Harvard, and calls himself editor because the body of the book consists of a mass of reprinted letters, editorial articles, speeches, addresses, etc., given as illustrations of different "forms of public address." The original part of the book is an introduction in the form of an open letter to teachers. This we have found interesting, and it seems to be indicative of a tendency at Harvard away from the cultivation of the pure art of debate, and more in the direction of a return to the study of English composition as such.

The sum and substance of Mr. Baker's argument we take to be that the mastery of the art of formal debate is of less importance than it has been generally supposed to be, because in actual life the occasions for formal debate are few; what we need to learn is mainly how to write a letter, how to make a report, how to write an editorial, how, in short, to take some idea which we wish to enforce, advance, or express, and put it in a simple and effective shape, adapted to the comprehension of those to whom it is addressed. Evidently this is English composition as we used to study it, with modifications. First be sure that you have something to say, and then devote yourself to the expression of it.

Mr. Baker thinks that, at present, teachers of rhetoric are altogether too fond of paying attention to *phrase*, which is highly probable. He seems to us to be at fault in supposing that students can be profitably taught to mould and adapt what they have to say to particular audiences. A young man of twenty can hardly write an inaugural address in the character of a person about to take the oath as President of the United States in the midst of civil war. Mr. Baker himself says that he has found it almost impossible to get a student to write a good letter to an imaginary friend urging him in the summer vacation to "room with him" during the coming year. "Most students merely stated why they liked their rooms; hardly one looked at the plan through the eyes of his friend." There is, of course, no end to the different species of exercises in composition which may be taught—the Greeks and Romans spent years over rhetoric where we spend months; but we are inclined to think that in the long run the simplest are the best. *Précis* or abstract writing is not referred to here, perhaps because it is regarded as too elementary; in our experience, however, it is one of the most valuable sorts of training in expression which a young man or woman can acquire, and one most persistently neglected.

Garden Colour: Spring, by Mrs. C. W. Earle; Summer, by E. V. B.; Autumn, by Rose Kingsley; Winter, by Hon. Vicary Gibbs. With coloured sketches and notes by Margaret Waterfield. E. P. Dutton & Co. 1905.

The recent marvellous advance in photographic processes for reproducing colors has rendered it certain that a sumptuous book like 'Garden Colour' must sooner or later be made for lovers of fine gardens, but the present exquisite treatise comes with somewhat of a surprise. It was hardly to be expected that the first essays in this direction would be so nearly free from blemish as are almost all of the colored plates here. Undoubtedly, the photographer had at his service water-color drawings of more than ordinary quality. In fact, this is shown by the touching introduction by the editress, which indicates that she has a very deep love for gardens and for all things beautiful. She has thrown a great deal of herself into the paintings which make the basis of these studies in chromo-horticulture. A few of them are decidedly impressionistic (to use a poor word), but they are, nevertheless, exceedingly effective.

The contributed text is not so uniformly good as the plates. This is perhaps to be looked for. Some of the "practical" directions are not wholly practical, but they cannot lead anybody astray. The book does not profess to be a handbook of gardening: it is simply a guide to the proper management of color in foliage and blossom. Even in our own country the suggestions will be found useful, since the lists given for England can with a few changes be employed in the selection of effective groups here. The differences are not much greater, in fact, than between color and colour. Although the volume is best adapted to use on grand estates, where great masses of plants can be employed, it is also a sound adviser as to tiny plots around small houses. Its judicious counsel, honestly followed in our suburban homes, would spare us the dreadful color-tragedies which shock us on every hand. Our excellent horticultural journals are now doing much towards abating the nuisance of mismated garden plants, and this volume, rightly used, will be of much service in the same direction.

BOOKS OF THE WEEK.

Jordan's Guide to the Study of Fishes

By DAVID STARR JORDAN. Two volumes, *936 illustrations*, 1223 pp., 8vo, $12.00 net. Carriage additional. (*Illustrated prospectus with sample pages on application.*)

A comprehensive work, at once scientific and popular, by the leading American ichthyologist. It discusses the structure, habits, evolution, and economic value of fishes. It treats of the characteristics of chief groups, emphasizing those, which by reason of divergence from typical forms, are of especial interest. Extinct fishes are discussed along with their living relations. There is an abundance of pictures in half tone and other forms of black-and-white illustration, and the frontispiece of each volume shows in colors some of the remarkable fish brought by the author from his Pacific explorations. There are also portraits of the world's leading ichthyologists. These two sumptuous, large octavos are intended to be valuable for technical students, and interesting to anglers and nature lovers.

A remarkable humorous tale that has been compared favorably with the works of Dickens, Stockton, Mark Twain and Jacobs

The Belted Seas

By ARTHUR COLTON $1.50

"What Jacob has done for the British seamen, Colton has done for the Yankee sailor."—*N. Y. Evening Post.*

"A sailor's yarn, spun to a company worthy of Dickens."—*Life.*

"A humorist, spontaneous and demure. . . . Droll all through."—*New York Tribune.*

"Produces an illusion which is the perfection of literary art."—*New York Globe.*

"Colton's sailormen are flesh and blood."—*Public Opinion.*

"Recalls Stockton at his best, yet with a human appeal pathetic rather than comic—two of the very qualities which vibrate in Mark Twain's work."—*Cincinnati Enquirer.*

The Divine Fire

By MAY SINCLAIR

The Transcript says: "It is rare, indeed, to come across a novel in which there is so much genuine greatness." 6th printing, $1.50.

Henry Holt and Company

A Book Worth Reading and Owning

JÖRN UHL

By GUSTAV FRENSSEN

Authorized Version. Translated by F. S. Delmer

This remarkable novel introduces scenes and characters wholly new to most American readers.

The peasant hero, whose name gives the title to the romance, is one of the most powerful creations in modern fiction.

Many social and ethical problems of the day are touched upon in the book, and the plot is of great interest.

Over 200,000 copies of "Jörn Uhl" were sold in Germany within eighteen months after publication.

All booksellers, $1.50

JOHN KNOX AND THE REFORMATION

By ANDREW LANG. With 2 Photogravure Plates and 3 other Illustrations. 8vo. $3.50 *net*.

In this Life of Knox the author has tried as much as possible to get behind tradition, which has so deeply affected modern history of the Scottish Reformation, and even recent biographies of the Reformer.

LONGMANS, GREEN, & CO.

School Trustees, Principals, Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

LONGMANS, GREEN, & CO.'S NEW BOOKS

John Knox and the Reformation

By ANDREW LANG. With 2 Photogravure Plates and 3 other Illustrations. 8vo. $3.50 *net.*

In this Life of KNOX the Author has tried as much as possible to get behind tradition, which has so deeply affected modern history of the Scottish Reformation, and even recent biographies of the Reformer. This tradition, based to a great extent upon KNOX's own "History," Mr. LANG carefully criticises, and from its expressed views he distinctly dissents, finding his opinion more in harmony with Hallam, Hume, and Robertson than with some of the more recent students of KNOX.

Studies in Colonial Nationalism

By RICHARD JEBB. 8vo. $3.50 *net.*

Mr. JEBB believes that the view commonly held of the future development of the British Empire is obsolete, being based on conditions and ideas which have very largely altered in the course of the last six years. He finds that, so far from welcoming the federation dreamed of by official Imperialism, the colonies, each in its peculiar and diverse way, are tending in the direction of nationalism.

Cuba and the Intervention

By ALBERT G. ROBINSON. Large Crown 8vo. 370 pages. $1.80 *net.* By mail, $1.92.

"Mr. ROBINSON has undoubtedly written the most truthful book on our Cuban intervention that has yet appeared, and this has been possible to him because he was himself sufficiently detached from administration officialism during the years of his personal and close observation of the intervention to make him something of a critic."—SPRINGFIELD REPUBLICAN.

"A book which is destined long to figure among the most valuable materials for a comprehension of Cuba's history at a critical conjuncture. . . . The Author was an eye-witness of the events that he describes, and he brought to his task a mind qualified by education and experience for the work of observation. . . . With the possible exception of an occasional paragraph the volume consists entirely of newly written matter."—NEW YORK SUN.

Handbook of Homeric Study

By HENRY BROWNE, S.J., M.A., New College, Oxford; Fellow of the Royal University of Ireland; Professor of Greek at University College, Dublin. With 22 Plates. Crown 8vo. $2.00 *net.*

CHAPTER I. The Homeric Poems. CHAPTER II. The Homeric Bards. CHAPTER III. Historical Outlines of the Homeric Controversy. CHAPTER IV. Homeric Life. CHAPTER V. Who were the Homeric People? CHAPTER VI. The Epic Art of Homer.

Lynch-Law

An Investigation into the History of Lynching in the United States

By JAMES ELBERT CUTLER, Ph.D., Instructor in Economics in Wellesley College; sometime Henry C. Robinson Fellow, and Instructor in Political Economy in Yale University. With Foreword by Professor W. G. SUMNER and 13 Charts and Diagrams. Crown 8vo. $1.50 *net.* By mail, $1.64.

CONTENTS: Introduction.—Origin of the Term Lynch-law.—Early Lynch-law.—Lynch-law 1830-1860.—The Reconstruction Period.—Lynchings.—Lynch-law and Its Justification.—Remedies.—Some Conclusions.—List of Periodicals Cited.—Index.

Ice or Water

Another Appeal to Induction from the Scholastic Methods of Modern Geology.

By Sir HENRY H. HOWORTH, K.C.I.E., D.C.L., F.R.S., V.P.S.A., F.G.S., President of the Royal Archæological Institute, Author of "The Mammoth and the Flood," "The History of the Mongols," etc. 3 vols. Vols. I. and II. Medium 8vo. $12.00.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

"Complete and compact—a true pocket variorum."

HAMLET

The "First Folio Edition," reproducing the original text of 1623, with full notes, comments, variorum readings, etc.

Edited by CHARLOTTE PORTER and HELEN A. CLARKE

"I am much impressed by its completeness. I do not know any other edition which treats it so exhaustively."—SIDNEY LEE.

"Pray accept my heartiest congratulations on your new, important, and attractive undertaking. . . . You do wisely in reprinting the First Folio."—HORACE HOWARD FURNESS.

Seventh play to be issued.
Size of volume 4¼x6¼.

THE CLARENDON PRESS

JUST PUBLISHED:

The Elements of Railway Economics

By W. M. ACWORTH, author of "The Railways of England," "The Railways and the Traders," &c. 8vo, cloth, 70c.

"An intelligent man, if he will apply his mind for a few hours to the study of this little book, may have a clearer understanding of the problem of railway rates than is now manifested by most of our public speakers and newspaper editors. Mr. Acworth has explained a difficult problem with such admirable lucidity as to bring it within the popular comprehension, and he would have been censurable had he hid his light under a bushel. While his book may have been intended for his students at the London School of Economics, and while his illustrations and applications are primarily English, the American people stand in especial need of its lessons, and their need has never been so great as it will be during the coming years."—*The Evening Post, May 8, 1905.*

Aristotle's Politics

Translated by BENJAMIN JOWETT, with Introduction, Analysis and Index. By H. W. C. DAVIS, M. A. Extra fcap, 8vo, cloth, $1.00.

Dante's Divina Commedia

Translated into English Prose, by the Rev. H. F. TOZER, M.A.
Uniform with **Dean Wickham's translation of Horace.**
Jowett's translation of the four Socratic Dialogues of Plato.
Jowett's translation of Aristotle's Politics, by H. W. C. Davis.
Extra fcap, 8vo, cloth, $1.00.

ALSO PUBLISHED BY HENRY FROWDE

Author and Printer

A Guide for Authors, Editors, Printers, Correctors of the Press, Compositors and Typists, with full list of abbreviations, by F. HOWARD COLLINS. Crown, 8vo. Cloth, $2.25.

Educational.

CALIFORNIA, San Mateo.

ST. MARGARET'S Suburban School. Forty minutes from San Francisco. For book of information address ELEANOR E. TEBBETTS, Principal.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School. New features. Address the Dean. M. M. BIGELOW.

MASSACHUSETTS, Cambridge.

THE GILMAN SCHOOL FOR GIRLS. ARTHUR GILMAN, A.M., Director.

OUTDOOR STUDY ALL WINTER. English Classical School for Girls. Art, Music, College Certification. ANNA B. ORTON, Prin., Pasadena, Cal.

HARVARD UNIVERSITY

EXAMINATION FOR ADMISSION

will be held in New York City on June 26 to July 1 inclusive, in the rooms of the West Side Branch Y. M. C. A. Building, **318 West 57th St.**, and **not** in the Harvard Club as previously announced.

ROCK RIDGE SCHOOL

For Boys. Location high and dry. Laboratories. Shop for Mchanic Arts, *Strong teachers. Earnest boys.* A new gymnasium with swimming pool. Fits for College. Scientific School and business. Illustrated pamphlet sent free. Please address

Dr. G. R. WHITE, Principal, Wellesley Hills, Mass.

The HIGHLAND MILITARY ACADEMY,

Worcester, Mass. 50th year. The Rt. Rev. Alex. H. Vinton, D.D., LL.D., Springfield, **Visitor.** Says a present patron: "The best investment I have ever made was the placing of my sons in your school." Address:

JOSEPH ALDEN SHAW, A.M., Head Master

BERLIN, GERMANY

WILLARD SCHOOL FOR AMERICAN GIRLS

General Courses in German, French, Literature, Art, Music. Prepares for American Colleges. Foreign travel. Twentieth year opens Oct. 4. For circular address Dr. ALICE H. LUCE, Auburn, Maine.

Instruction

AT FAR ROCKAWAY.—High-School teacher would take charge, during summer, of two boys preparing for college. Address F. M., Far Rockaway, N. Y.

School Agencies.

THE FISK TEACHERS' AGENCIES EVERETT O. FISK & Co., Proprietors. 4 Ashburton Place, Boston; 1505 Pa. Ave., Washington; 155 Fifth Ave., New York; 414 Cent. Bld., Minneapolis; 533 Cooper Bldg., Denver; 80 Third St., Portland; 203 Mich. Blvd., Chicago; 325 Stimson Block, Los Angeles; Hyde Block, Spokane; 420 Parrot Bldg., San Francisco.

ALBANY TEACHERS' AGENCY. 81 Chapel St., Albany, N. Y.—Provides schools of all grades with competent teachers. Assists teachers in obtaining positions. HARLAN P. FRENCH, Proprietor.

SCHERMERHORN'S Teachers' Agency. Teachers—Schools—Tutors—Governess—Property. Tel. 6129 18th. JOHN C. ROCKWELL, Mgr., 3 E. 14th St., N. Y. C.

Resorts.

ROSEVILLA, NEUCHATEL, SWITZERLAND Beautifully situated above the lake with wide view of the Alps. Large shaded grounds. A quiet, attractive Swiss Pension. Open all the year. House heated by hot water. Address

Mesdemoiselles Guillaume, Neuchatel, Switzerland.

Important Publication

Robinson's Selections from the Public and Private Law of the Romans

$1.25

A COLLECTION of carefully selected texts systematically arranged, which present some of the more instructive and interesting principles of Roman law. This book, which is the only volume of its kind published, shows the importance of some acquaintance with the source-material for the study, and encourages a closer union between philological and legal studies. The texts illustrate and explain the commonly recurring technical terms of a legal character, as they are most frequently found in the Latin authors usually read. The commentary traces the history of such fundamental institutions as *patria potestas*, *manus*, marriage, adoption, manumission, *familia*, etc., and endeavors to make them intelligible in their legal aspects.

The Nation.

NEW YORK, THURSDAY, JUNE 8, 1905.

The Week.

Nominally a friendly talk on Far Eastern matters, the President's interview with Count Cassini on Friday must be regarded as a tentative proffer of good offices. Unless Mr. Roosevelt stood ready to take the more decisive step, the meeting would have been merely a superfluous expression of sympathy. Whether or not this initiative is welcomed at St. Petersburg, it is a notable hint of the sentiment of civilization against the continuance of the present carnage. President Roosevelt has this qualification for a negotiator, his Government has throughout taken a disinterested attitude in the Far East. Moreover, he would, as few other chiefs of state, command the confidence and good will of China—an all-important matter, for the treaty of peace will undoubtedly involve the readjustment of the Chinese boundary. The President's overture is, further, timely because rather few satisfactory mediators are in sight. England and France, as allies of the belligerents, are out of the question. There is much talk of the Kaiser, but his pro-Russian sympathies have been undisguised, and he is hardly *persona grata* to China. There is a strong peace movement in Italy, and the King has evident qualifications for the delicate office of go-between. Otherwise, the choice is very limited, unless, indeed, the precedent were renewed of calling upon some trusted monarch of a small Power, like the King of Denmark, or of Sweden and Norway. This survey of the possibilities will show that there is nothing officious about the President's overture, which, whether he or another plays the part of peacemaker, commands the sympathy of all lovers of peace.

The Administration's decision to intern the Russian cruisers at Manila marks another advance in the law of asylum for belligerents. It will be remembered that the vessels interned at neutral Asiatic ports since the beginning of the war were dismantled only after some days or weeks of waiting. Thus the gunboat *Mandjur* was not placed out of commission at Shanghai until the arrival of a Japanese warship off Woosung stirred up the Chinese officials. The indefensible cutting out of the destroyer *Ryeshitelni* at Chefoo was excused by the Japanese on the ground that China had made no effort to intern the boat. The difference between the case of the *Lena* at San Francisco and that of Rear-Admiral Enquist's vessels at Manila is that repairs to the former were due to the ordinary deterioration of active service, while the cruisers in the Philippines received their injuries at the hands of the enemy, and not through "stress of weather." This fact made necessary greater circumspection in dealing with them, since to allow them to repair for some time and then put to sea might lead to a Japanese complaint that the United States, a neutral, gave the Russians the opportunity to recover from the blows inflicted by Togo's fleet. Since the Russians were able to enter Manila at a fifteen-knot rate, and could repair the worst damage in sixty days, it is obvious that they are quite capable of taking the seas without danger of sinking. Under the circumstances, the President gave them their choice of taking on the necessary water and stores in twenty-four hours and putting to sea at the expiration of that time, or dismantling. He thus sets a precedent for the treatment of vessels disabled by gunfire which should be of permanent importance in international law.

The report that the Chinese Government is about to annul the concession of the American-China Development Company is a prompt sequel of the battle of the Sea of Japan. It affords, in some fashion, an interesting parallel to the asphalt dispute in Venezuela. The concessionnaires in China are to have the choice flatly of accepting an indemnity or submitting to the revocation of their charter without compensation of any kind. When this report is confirmed, it will be interesting to observe the attitude of our State Department. Has it a consistent principle in dealing with commercial controversies with weak nations, or is its vigilance directed exclusively to the Caribbean? As a matter of fact, the proposed extinction of the Chinese concessions may be said to be based on a rude theory of condemnation by eminent domain. But is a weak nation justified in asserting any such right in the case of property of citizens of a strong nation? This is one of the questions that must arise if China renews her anti-foreign policy. Meantime, it will be regrettable if she fails to discriminate between commercial privileges which mask schemes of conquest, and those which have no ulterior political aim. To this latter category belongs unquestionably the American company whose chief purpose has been the construction of the Canton-Hankow Railroad.

After all is said and done, what is the use of calling Congress in special session only three weeks before the regular session begins? Now that the President has decided to postpone this extra session from October 16 to November 13, he might almost as well yield to the "stand-patters'" further demands and give it up altogether. He would not, in fact, get even three weeks' work out of a sulky Congress, for, warned by the experience of two years ago—which their constituents, too, by the way, are remembering—they will not jeopard the payment of their mileage by letting the two sessions merge. This is the year of the long session, and three weeks can be added at the other end without serious inconvenience to anybody. But, in very truth, the stand-patters have devised a series of reasons which make it logically impossible ever to touch the tariff. In the fall of 1903 they said: "Not this session—the national election is coming; but, when that is over, we will see what needs to be done." In the fall of 1904 it was: "Not this session—there isn't time; but at the next session, with our 114 majority, we will get around to it." Already, however, we begin to hear the Congressional elections of 1906 urged as a reason for delay. These same arguments can be alternated from now till doomsday; and, with high-tariff politicians talking rate regulation and friends of the railroads talking tariff reform, the chances of getting results before then look decidedly small.

All-round congratulations would seem to be in order over the reported acceptance by Secretary Morton of the presidency of the Interborough Rapid Transit Company. That corporation, no less than its patron, is assured of a capable and experienced executive officer. Mr. Roosevelt is relieved of the embarrassment of attacking the wicked railroad men when one of the chief of sinners is a member of his own official family. Mr. Morton is spared any sense of humiliation in stepping from the Cabinet into another responsible position. Not the least part of his good luck seems to be that he has taken hostages of fortune this time by obtaining assurance of an official tenure which cannot be terminated by the unexpected turns of politics or the shifting currents of popular opinion. Most fortunate of all is it that Mr. Morton, with his great experience in railroading, is called to administer a road which enjoys, perhaps, the unique advantage of being unable to accord rebates even if it would.

President Roosevelt's selection of Charles J. Bonaparte to succeed Mr. Morton as Secretary of the Navy will strengthen the Cabinet in its advisory capacity. Unlike some of the present

departmental heads, Mr. Bonaparte has had a wide experience in public affairs, and he will be able to judge of foreign happenings with some understanding of the European point of view. By birth and training, he is committed to the gentleman's method of dealing with other nations. But Mr. Bonaparte is, of course, Imperialistic in his tendencies, and would hardly have been chosen for his position were not he, like Mr. Roosevelt, convinced that every happening on earth and on the sea has but one moral—the necessity for more battleships. The new Secretary has rendered services of immeasurable value to the cause of civil-service reform and the movement for decent municipal government—a fine record marred by his error of judgment in persuading the President to grant money to Catholic schools on Indian reservations, in violation of the spirit of the Federal statute on this subject. So far as personal devotion to his new chief is concerned, no one will surpass Mr. Bonaparte. He has been warmly attached to him ever since Mr. Roosevelt took office as Civil Service Commissioner—if not earlier. All in all, the waning prestige of the Cabinet is considerably restored by this Baltimorean appointment.

President Castro, in his message to Congress, comments upon the intervention of the United States in the asphalt dispute in the following dignified terms:

"With the United States, through causes foreign to our will and without the least responsibility on our part, we have had a slight difference, but the discussion of the questions seems to have made the facts clear to the American Government, judging from the measures the said Government lately passed in favor of our good and cordial friendship. These questions refer to the Bermudez and Orinoco companies. The latter have already been adjudged under the protocols, but nevertheless Mr. Bowen desired a new arbitration. *The Government could not accede to this, as the sovereignty and independence of the republic were involved.*"

The political aspects of the case could not be put in language more conclusive and conciliatory. President Castro simply stands upon the right of the Venezuelan courts to pass upon all cases involving the status of foreign concessionnaires on Venezuelan soil. In this contention the law of nations absolutely bears him out. Extra-territorial courts have frequently been imposed upon weak nations in cases concerning the persons of foreign residents, but that jurisdiction has never been stretched to cover routine civil cases. When the courts of a weak nation are corrupt, as, without evidence of any kind, those of Venezuela are alleged to be, a nation representing abused creditors must either put up with the injustice, or, if the occasion warrants, take forcible measures for recovery. Now, nobody for a moment believes that the Bermudez concession is either clear enough in law or equity or important enough intrinsically to justify the hazard of a new "pacific blockade." Business speculators in a disorderly country like Venezuela take their chances, and we see no course for Mr. Roosevelt but to give to the Venezuelan courts the credence which President Castro claims for them, or else ask Congress to declare war.

Bowen and Loomis have evidently exhausted their usefulness in the State Department and should go. It appears that Minister Bowen, finding in the Legation at Caracas papers of a nature compromising to Mr. Loomis, gave the substance of them to a newspaper correspondent. For this indiscretion he should be dismissed, even if the charges against Mr. Loomis should be proved. As for Loomis, it is enough and too much to know that he banked with the Bermudez Asphalt Company, whose affairs were under litigation in the Venezuelan courts, and vaguely under the protection of the State Department. It appears, also, that he advanced money on the security of claims against the Venezuelan Government, and actually made a proposal for the commutation and partial payment of this torpedo-boat scrip through the Secretary of Legation. The transaction, as Mr. Loomis explains it, seems to have been honest, but it reveals abysmal depths of indelicacy, and an incapacity to live up to the dignity of a ministerial position that should forever disqualify Mr. Loomis from holding any diplomatic post. Luckily, we hear no more of "forcing Venezuela to do justice"; and, indeed, it was time to go slow in negotiations conducted by two gentlemen in whom the sense of the fitting seems almost equally to be in abeyance.

The opening of the Lewis and Clark Exposition at Portland serves to remind the world how rapidly, in these days of steam and electricity, man can subdue nature and transform a wilderness into a populous city. Orators at our various celebrations are fond of telling us that the swift growth of our American commonwealth since the invention of the railway finds no precedent in history. At Chicago, and again at St. Louis, the familiar tale of the winning of the Middle West has been rehearsed. The barrier of the Rockies, however, made the problem of developing the Pacific Northwest somewhat different. To reach Oregon, Washington, and Idaho, to clear the dense forests on Puget Sound and along the lower Columbia, required more capital, energy, and intelligence than to drive a prairie schooner from Ohio to Iowa. For these reasons the romantic annals of that opulent country must always have a peculiar interest to students of American character and enterprise.

The real development has come in the short space of thirty-six years since the Union Pacific was carried to its junction with the Central Pacific at Ogden in 1869. The ups and downs of railway construction in Oregon, Washington, and Idaho will some day be made the subject of an elaborate history. The struggle for control of strategic lines in the seventies and eighties, the driving of the last spike of the NorthernPacific in 1883, the competition of the Great Northern more than a decade later, the expansion of the Alaska trade—all these momentous incidents have been crowded into a mere span of time. In place of the straggling, half-cleared farms, tiny lumber camps, and saw-mills, that only yesterday were mere specks in the forest about Puget Sound and the lower Columbia, we have to-day lands under the highest cultivation, great lumbering and mining industries, large factories, substantial cities, and a commerce with the Orient that has warranted the building of the largest freight steamers afloat. The purpose of the Exposition is to draw attention to these facts and to their bearing on the political and social welfare of the United States. Many of our citizens are even now almost as ignorant of the States of Washington and Oregon as was Jefferson himself. Few have any adequate conception of the large part the Northwest is already playing in our national life, or realize how great its political influence is to be in the years to come. But by visiting Portland they may at least learn by ocular demonstration that, in the annals of all mankind, there is no more conspicuous instance of brilliant achievement in turning a savage wilderness into a glorious empire.

When the alliance between politics and business is as intimate as it was in Philadelphia, there is a certain poetic justice in the fact that the political defeat of the Ring means financial defeat as well. That the lease which would have added enormously to the future profits of the United Gas Improvement Company, offered a magnificent opportunity for stock jobbing by the very men who expected to put the deal through, was obvious enough. But the rule worked both ways. As soon as it was made plain that the embattled citizens had won and the lease would not go through, down went the stock again, margins were wiped out, and many an officeholder who could defy brazenly the prayers of good citizens and even the contempt of his own constituents, has received the kind of punishment that he can feel when he looks over his bank-book. Every day brings fresh evidence of the overwhelming character of the machine's defeat. To suppose that it is dead or powerless would merely be to invite its recovery, but the severity of the blow which has

fallen on the great leaders as well as the small-fry politicians is cause for righteous satisfaction.

Gov. Douglas of Massachusetts, whose term expires this year, has formally refused to run again; Gov. Folk of Missouri, whose term expires in 1906, says he will not be a candidate; Gov. Johnson of Minnesota, who has the same time still to serve, began his career in office by recommending an increased term for his successor, with ineligibility for himself. It certainly cannot be said that the Democratic Governors who carried Republican States last fall exhibit any unseemly eagerness to hold on to their offices. Gov. Toole of Montana, who has three years more to think the matter over, is alone in saying nothing at present about his political future. There is small resemblance, to be sure, between the political conditions in Minnesota, Missouri, and Massachusetts, and the three Governors came to their decisions from very different motives, but the coincidence is none the less interesting. It is the more curious because the "minority party" is usually supposed to have very much better chances in an "off year." Thus, John Lind, in Minnesota, failed in 1896 and 1900 to be elected Governor of Minnesota, but came in with a comfortable margin in 1898; and other instances will readily come to mind. But if the only Democrats who won victories in the enemy's country last year are to retire without a second battle, this may powerfully affect the political aspect of the country by the time the next national campaign is on.

We find in the Chicago Teachers' Federation Bulletin a denial of the current report (on which we commented a fortnight ago), that on May 21 the Federation of Labor passed a resolution approving the strikes among school children in that city, and condemning the Board of Education for suppressing them. Such a resolution was offered, it seems, but burked by the executive committee. We do not know on what grounds. The object of strikers is to bring to bear every available stress on the community to compel employers to submission. If the mob can be swelled by excited children, and anarchy be extended even to the schools, why not? We cannot forget that in the coal strike of 1903 the schools everywhere were in danger of being closed for want of fuel. This was foreseen by Mitchell and his satellites, nor did the spectacle distress them. They are, in fact, the greatest enemies and corrupters of youth the world has ever seen. They teach daily the lesson of a grievance sacred as soon as asserted, and bearing with it unlimited rights to cripple and destroy whoever and whatever opposes the demand which accompanies the statement. They teach the futility of argument, of courts, of peaceful processes; they inculcate hostility to all the powers of law and order. The young listen, catch the lineaments of passion and of ruffianism, apply the practices in their own childish sphere, and graduate to the mob before they have left the multiplication table behind.

The annual Arbitration Conference in session at Lake Mohonk had, as Judge George Gray pointed out last week, no reason to be discouraged, in spite of the war so obstinately raging in the East. Not only has the past year witnessed the amicable settlement of the North Sea incident which so nearly involved in hostilities Russia and England, but no less than fourteen other international disputes have been adjudicated by the Hague Court, or are now pending before that tribunal. Certainly here is cause for satisfaction; the Hague machinery is working steadily. Far less will be heard of its achievements than should be the case, but with each year the grist it grinds is certain to be of greater and greater value to the people of the earth. The horrors of the present war must incline sober-minded men, not possessed by the jingo mania, more and more to the peaceful settlement of quarrels. According to Japanese estimates, fully 7,000 Russians have been blown to pieces, have been scalded to death in engine-rooms, or slowly drowned and suffocated in water-tight compartments. Shocking as death on the battlefield often is, it is even worse when men fight at sea under modern conditions, and this Russian slaughter ought to make all people ask themselves whether there is the slightest reason for such horrors 1900 years after Christ.

For the moment the Kaiser has scored notably in Morocco. As a result of the special mission to Fez, the Sultan has declined to accept the French proposals for reform in his régime, and desires to call an international conference on the matter. This is to treat the Anglo-French agreement as of no effect. Precisely this plan of an international conference has been advocated by Germany from the first. Some weeks ago our State Department was asked to initiate negotiations for an international guarantee of the open door in Morocco. Failing to obtain the adherence of a disinterested Power to the project, the Kaiser has persuaded the Sultan to repudiate the tutelage of France and England and appeal to the European concert. For France the situation is an awkward one. She confronts the alternative either to take forcible steps to secure her pretensions in Morocco, or to persuade the chancelleries of the world to refuse the Sultan's invitation. Judging from the past, a display of force would bring the Sultan to terms promptly, whereas diplomatic representations would necessarily be long and doubtful. On the other hand, to show the mailed fist would discredit the theory of "peaceful penetration."

M. Delcassé's final resignation is probably to be explained on personal grounds, although it falls in significant coincidence with the German check to his Moroccan policy. Mr. Delcassé, while an admirable Foreign Minister when given his head, has shown an undue sensitiveness to Parliamentary criticism, and it has been known that for some time past he has been an uncomfortable member of Premier Rouvier's official family. In all international relations, however, M. Delcassé has been a model of imperturbability, and never more than in the recent vexatious negotiations, which have ended with a striking but possibly barren triumph for the Kaiser. Whatever the outcome of the Moroccan affair, M. Delcassé's name is permanently associated with the *rapprochements* between France, England, and Italy. His diplomacy has fairly undermined the Triple Alliance, has diminished the European prestige of Germany, and has prepared the way for a new balance of power. Although he is going out under a cloud, his titles to remembrance and gratitude are sure.

Professor Seurat, of the Sorbonne, who has been investigating the French islands of the Pacific, particularly the Society Islands, reports general misgovernment and moral decadence. Misappropriation of Government funds and of those contributed by benevolent donors has occurred in several instances, and poverty and shiftlessness are the rule. What is the advice of this trained observer—that the tricolor must not come down? that these unfortunate colonial adventures are providential, and 'twere impiety to desist so long as there is a franc in the French Treasury? that the opportunity of managing islands at the Antipodes must be kept open in order to put iron in the blood of pale students of the *pays Latin*? No, none of these things. He advises, instead, that, since these islands are a most expensive and undesirable possession, they be sold to some country that can make a good use of them. To have imperial possessions treated—like undesirable acquisitions on the shelves of a bibliophile—as so many items for the international auction room, arouses moral indignation. Who knows how soon this penny-wise policy may be applied to those tarnished pearls of the Pacific, the Philippine Islands? It is a thousand pities that Professor Seurat should have committed himself on what is essentially a matter of sentiment, before he had learned of the promulgation of the "Dix doctrine" by Ambassador Reid.

THE LINES OF RUSSIAN REFORM.

The political situation in Russia, which for a long time has been in a stage of ever-varying but intense interest, has been and will continue to be rendered more acute by the recent crushing naval defeat in the Far East. Whether peace is to be promptly concluded, or whether the war is to be prolonged, depends solely upon the Emperor, and his decision cannot be foretold from his character. While he is, no doubt, at heart, sincerely desirous of peace, he is likely to consider the question of national prestige for a time, at all events, and to adopt the view which was held (especially in army and navy circles) after the fall of Port Arthur and the defeat at Mukden, and is probably still held: "There is still a chance of victory. We are not yet as badly off as we were in 1812 with the enemy in Moscow, the heart of Russia; and we conquered then."

The first question which presents itself, in connection with recent happenings at home and abroad, is, Will the revolution so long and so confidently predicted by many actually take place? Certain it is that the Social Revolutionists (the heirs of the famous Nihilist party) will endeavor to seize the opportunity to carry out their programme of overthrowing the autocracy, establishing universal suffrage, and the rest. People who depend upon the press reports as to conditions and recent agitations in various parts of Russia, will naturally expect something in the nature of the French Revolution. But private advices from competent observers declare that all these reports of internal riots and disturbances have been greatly exaggerated by both the Russian and the foreign press. It may confidently be asserted that there will be no revolution of the French pattern. The economical situation of the majority of the Russian people is not to be compared for extreme misery with the condition of the French peasants which precipitated their catastrophe. But, if not revolution, evolution is bound to come. It has begun. In the present crisis, the important party is not the Revolutionists, but the Moderate Liberals, who alone have experience in administration. It will not be out of place to attempt a speculative sketch of the character of the concessions and institutions likely to prove satisfactory to them, and presumably best for the interests of the country.

The Emperor's good faith in promising constitutional government cannot be questioned. He sometimes allows himself to be swayed by the conservatives, but he is sincerely devoted to progress and the good of his people. In the first place, universal suffrage is, for the present, impossible. The nation is not ripe for it. The peasants already have the suffrage on the basis of one vote to a household, and it is by extension and practice of this in a higher degree that the way can be paved for universal suffrage hereafter. There can, likewise, be no question of a parliamentary government in the sense understood in England and France; but one modelled on the pattern approved in Prussia, Austria, and America, where the Executive chooses his ministers or secretaries, is the only possible form. These officers, being responsible to the constitutional body and able to select suitable officials, will be competent to deal with and solve the vexed problem of the hated bureaucracy. The constitutional body sanctioned by the Emperor three weeks ago, the Zemsky Soviet (Council of the Land), will form the lower chamber, the upper chamber being the Council of the Empire, as recently described in these columns. As it is easier and more practical to adopt a ready-made pattern, with whose workings the Emperor and others are thoroughly familiar, and which has proved satisfactory, than to frame a new one, it is probable that this Zemsky Soviet will be copied from the Diet of Finland, and consist of four houses, one for each of the classes—nobles, clergy, citizens, and peasants. As this plan of separate elections for the different classes has also already been in use for forty years in all the provinces which have zemstvos, and will be introduced into those which are now to obtain zemstvos, it will seem no novelty. The practice acquired by the classes in separate elections for the Zemsky Soviet and in separate management of their affairs will gradually prepare them for general elections and universal suffrage.

What is needed for the Caucasus is a good local advisory board, and a first-class man as Viceroy. Perhaps, in the beginning, it may even be necessary and salutary to preserve a purely autocratic régime for the administration of the provinces on the eastern border, such as England has in Egypt and India, and Austria in Bosnia and Herzegovina. In any case, the sovereign will retain considerably more power than is accorded to an ordinary constitutional monarch, like the King of England, for example; and this will be best for Russia.

To Poland a certain measure of autonomy, compatible with general conditions in the Empire, is likely to be restored. Happily, the Moderate Liberal party in Poland is favorable to good relations with the Empire; and this autonomy, added to the rights already restored, would go far to render the Poles loyal and contented subjects of Russia, as Count Andrássy, hung in effigy by command of the Emperor Francis Joseph after the Hungarian troubles of 1848, became, a few years later, Prime Minister of the Empire and a devoted subject. The Poles in German Poland, it is true, have constitutional rights which have not hitherto been enjoyed by the Russian Poles; but, from a national and ethnographic standpoint, the latter have more rights, as the flourishing development of the theatre, literature, and art in Russian Poland (which is utterly lacking in German Poland) proves. In Finland, matters are already in a more satisfactory condition; so much so that when the Governor-General, Prince Obolensky, recently returned to Helsingfors from St. Petersburg, he received an ovation and was showered with flowers. Finland has already got back practically all her former rights. The military question, which alone remains unsettled, is to be decided two years hence. In the meantime, she is to pay a certain amount of money in lieu of service.

The troubles connected with the universities and with students in general can be settled only by the concession of academic autonomy, such as is enjoyed in Germany, France, and elsewhere. While some restrictions have already been removed from the Jews, the complicated and important problems connected with their status must await solution by the constitutional council in action. Probably they will be discussed in that Zemsky Soviet by the representatives of all classes of the people; and a decision thus reached would not be subject to suspicion. But the first condition of any success whatever in dealing with the difficult political situation at home is political amnesty in the greatest possible measure. The greatest single cause of discontent is the (recent) treatment of political offenders on a footing with ordinary criminals.

THE EQUITABLE LIFE SITUATION.

A very grave situation was created by Friday's action of the Equitable Life directors. The case, as it appears to us, is simply this: A great corporation, with assets of $400,000,000 and with half a million policyholders on its list, had for two months been torn by dissensions in its management, in the course of which charges of mismanagement and illegal practices had been publicly made by several of its highest officers against each other. As was to be expected, under such circumstances, the company's business came to an absolute halt. Its out-of-town agents thronged to New York, and in open convention asked for the resignation of one of these officers. As the recriminations increased, the public naturally rushed to the conclusion that still more serious scandals lay behind those which had been dragged to light in the quarrel between the president and the vice-president. Between these two officers lay direct and public issues of fact. A feeling of panic had begun to seize on men and women who had been paying their savings, year by year, to this company in return for a

guarantee of provision for their families at their death. The crisis was urgent, and there was only one way to meet it. The directors chose a committee from their own membership, conferred on it full power to investigate the charges made and the whole management of the Society, and instructed it to report its findings frankly.

At the start, this committee was looked upon by the public with much suspicion—chiefly because of a prevalent belief that the ownership of the company by one majority stockholder, the admitted existence of "dummy directors" on the board, and certain financial entanglements would obstruct unbiassed judgment. Early in April, the committee's chairman published his heads of inquiry; they were so searching and comprehensive as apparently to preclude all possibility of "whitewashing" or evasion. Thereupon public confidence in the committee returned. Mr. Frick's formal requests for evidence, addressed to the heads of the Equitable, were as plain warning as any honest man could have wished that the report would be unsparing.

What is the result? The committee submits its report to the directors; the report is found to be what its chairman's programme promised—an unflinching exposure of those grave evils regarding which the company's high executive officers have for months been exchanging accusations. There were open to the directors, in our judgment, three possible ways of dealing properly with that report. They might have approved it and published it. They might have published it, with approval of some findings and dissent from others. Finally, they might have rejected it *in toto*, denying the facts alleged—in which case their business was to produce the evidence refuting the charges—or rejecting the recommendations made and stating their reason for so doing. The directors chose none of these methods. They suppressed publication of the document, listened to the defence of some of the implicated parties, and then merely voted that the whole report be rejected. Except through unconfirmed rumor, colored by imagination and suspicion, the public knew nothing as to what these investigators of the company, chosen by the company itself, had desired to make known to its policyholders, or as to the grounds for the directors' action. The report, as subsequently given out, came from the committee itself, and without instructions from the board.

It appears to us that, from any point of view, the folly of this action is all but incredible. Resignations by directors whose work has been thus flouted, have followed as a matter of course. But in what a position is the company itself left by the board's extraordinary proceeding! It must be clear to any sane mind that the matter cannot stop where it is. The Frick report was made by order of the directors, but in the interest of the policyholders. Fortunately, these policyholders have obtained a knowledge of what the report contains by newspaper publication. Such publicity should have been conceded as a right, as a measure of self-preservation for the company. We ignore, and we shall continue to ignore until evidence is before us, the floating talk of "betrayal" of this accused officer or that by the committee, of secret offers by a committeeman, after submitting the report, to buy Mr. Hyde's stock control. Allegations of "betrayal" mean to us nothing, except that some implicated officer believed that he had a friend at court who would rule in his favor regardless of the evidence. But our judgment is, that neither incident, even if it were publicly proved, would in the least degree palliate the action of the board of directors. There are names signed to the report against which no intimation of blackmail could be raised for an instant; and, indeed, if every committeeman had been guilty of indiscreet or objectionable conduct, it would remain no less true that the report itself deals with facts, and that unless these can be disproved, it must be acted on, irrespective of the men who signed it.

As for the report itself, at present it suffices to say that the committee's findings of fact fully warrant the recent public demand for a thorough overhauling of the company's management, and, in our judgment, made inevitable a report of severe and unsparing character. We shall not undertake now to discuss Mr. Hyde's reported promise to "divest himself of his stock control"; that proposition cannot be intelligently considered until it is known who is to acquire the control which he lays down, what the terms of purchase are to be, and whether the Society itself has the right to pay the price. Beyond all these considerations lies the grave question, what steps the directors themselves are now to take to repair last week's blunder, and how they are to act on the formal charges which, even though the committee's report be officially rejected, are now more emphatically than ever before the public.

President Alexander and Vice-President Hyde have each published a reply to the report. The committee found President Alexander guilty of concealing from the directors his knowledge of illegal acts committed by his subordinates, and of being a member of the syndicate which, composed of officers of the Equitable, illegally and for the personal profit of its own members sold securities to that company. Mr. Alexander's reply is both feeble and evasive—qualities which, we are bound to say, have characterized every communication signed by him from the time this scandal started. He now declares the committee's charges to be "unqualifiedly false and not sustained by the evidence." Our own opinion is, that the evidence for them is absolutely convincing, and that the charges are established by Mr. Alexander's own communications to the committee. The alternative to acceptance of the committee's charges involves, indeed, a supposition fully as damaging to the president's reputation as the charges themselves. Yet he alleges it in his own defence, declaring that the grossly irregular purchases of securities which had been going on as far back as January 1, 1904, came to his knowledge only a few weeks prior to the board meeting of last February. What sort of executive supervision that is which renders possible such unauthorized misuse of the company's funds for a year or more, and to the sum of millions, we leave to the reader's judgment. At Mr. Alexander's door must also be laid, in accordance with all rational business practice, the first responsibility for the demoralization permeating the Society, and on these points the committee's evidence is quite irrefutable.

We have hitherto commented on the position in which Mr. Hyde was placed by his own admissions to the Frick committee. The committee finds him guilty of violating the insurance law by using the Equitable as a market for securities "underwritten" by his own syndicate, and we see no other possible conclusion. His counsel asserts that, "when the subject is fully understood," every right-minded man will agree that Hyde "was morally, as well as legally, entitled to these profits." Our opinion is, that the subject is fully understood already, and that right-minded men have reached and will sustain the opposite conclusion. Equally incontestable, in our view, is the committee's finding that Mr. Hyde has been guilty of other acts, "irregular in the sense that they are not in accordance with the Society's law or with sound business practices, treating the Society and its affairs largely as if they were his own personal concern."

This finding is, indeed, a mild summary of the specifications which the committee fortifies with its evidence. The well-established facts that Mr. Hyde has used the Equitable's investment funds to gratify his own ambition and secure a place on other corporation directories; that, between 1901 and 1903, his own salary was marked up from $30,000 to $100,000; that he had added $27,000 more by salaries paid him for nominal services by companies owned by the Equitable, and that, by his own admission, he had attempted to use the company's money for social celebrations of his own—these simply show what a system of "graft" has pervaded the entire institution, and why it is wholly out of the question that the beneficiary of such practices should remain in his present office.

If anything more than the Frick report were needed to prove the state of complete demoralization into which the company has been brought, it may be found in Mr. Tarbell's statements to the directors—statements as yet uncontroverted. The $8,000,000 loss in business during May, and the warning that failure to deal promptly with the existing situation will involve the demoralization and desertion of the agency force, simply prove the folly of all talk of a "peaceful and permanent solution, satisfactory to all interests," being near at hand. Altogether too much has been said already of "satisfying all the interests" that are now known to have fattened on illicit plunder from the company. It is high time that the policyholders' interest should take the place that belongs to it by right. For these policyholders, there can be no possibility of a permanent solution short of a thorough housecleaning which shall involve, first of all, removal of the officers whose mismanagement or guilt has brought the company to its present pass.

MUSIC IN AMERICAN UNIVERSITIES.

Two years ago three of the most famous American composers were at the head of the musical departments in our leading universities—John K. Paine at Harvard, Edward MacDowell at Columbia, Horatio Parker at Yale. To-day, Professor Parker alone remains at his post. Professor MacDowell left Columbia for reasons sufficiently discussed at the time, and a few days ago came the announcement that Professor Paine would retire on a pension, after having reached his sixty-sixth year and served his university forty-three years. In accepting his resignation the Board of Overseers entered on the records their desire to express "their sense of the high value of Professor Paine's services to the University, and to congratulate him upon his success in building up from the foundation the department of music."

Professor Paine is not only the Nestor of American composers, he is also the first native musician who mastered the larger musical forms and created works that won fame abroad as well as at home. His opera, "Azara," has not yet been produced. He regards it as his principal work; but even if it should fail of success, his orchestral works, notably his second symphony and his symphonic poems, "The Tempest" and "An Island Fantasy," and his music to the "Œdipus Tyrannus" of Sophocles and "The Birds" of Aristophanes, will always ensure him an honorable position in the front rank of American composers. These works will in all probability be better known to the next generation than to his contemporaries, in obedience to what seems to be a law of nature, compelling the best composers to write chiefly "music of the future." But in the other field in which Mr. Paine has done pioneer work—that of creating a department of music in American universities—the present generation is already reaping a rich harvest.

Although some women's colleges may have taught practical music—piano playing and singing—before Mr. Paine began his courses at Harvard, he was the first to establish music as a branch of academic study, on an equal footing with all the other branches, counting for the degrees of A.B. and A.M. He began his work at Harvard in 1862, while Yale, Columbia, and other institutions have established their courses of music within a decade or two. The Universities of Michigan and Pennsylvania were in the field somewhat earlier; but all these colleges have combined conservatory work (piano, organ, and vocal teaching) with some theoretical courses and the history of music, whereas all the eight courses at Harvard are what may be termed academic, and count towards degrees. At first the growth of the new department was very slow. Up to 1869 the courses amounted to little more than private instruction in harmony and theory of music; in the following year twenty lectures on musical history were delivered, and two years later, at Mr. Paine's suggestion, harmony and counterpoint were introduced by the faculty as academic studies. In 1873 Mr. Paine was appointed assistant professor, and two years later professor. Until ten years ago he taught without any assistant, but the latest prospectus includes, besides his name, those of W. R. Spalding as assistant professor, F. S. Converse as instructor in music, and H. L. Stone as assistant in music, while the number of students exceeds two hundred.

When Mr. Paine went to Harvard there was not only indifference to music, but a prejudice against it as a college study, and he had to fight against great odds. In a few years this feeling died out, and is now a thing of the past. It is singular that so much hard and persistent effort should have been necessary to gain a foothold for music, for the academic study of music is no new thing in Europe. Professorships on this subject have existed at Oxford from the twelfth century; at Salamanca, Brescia, Tübingen, from the sixteenth; at Bologna and Basel from the seventeenth. In the scholastic age music held the central place in the curriculum of learning. To-day there are professors of music at Berlin, Munich, Leipsic, and other German universities, but apparently not one has a thoroughly organized department where most of the subjects are taught and counted for degrees as at Harvard. Usually, at these institutions, the *Musikprofessor* is not a prominent composer, but a historiographer, like Philip Spitta, or Eduard Hanslick, or Hugo Riemann.

The two most important questions now before the American universities which have, or expect to have, a musical department, are: Should the German universities be accepted as prototypes, or Harvard, or Yale; and should the instructor ever be a great composer? The answer to the first question depends somewhat on circumstances. Yale, for instance, is doubtless wise in having orchestral and oratorio societies as an adjunct to the musical department, and is justified in giving instruction in piano, organ, violin, and violoncello playing, and in singing, while Harvard, being so near the concert halls and conservatories of Boston, can dispense with such practical matters and confine itself to harmony, counterpoint, history of music, musical form, fugue, canon, and the higher branches of composition, including orchestration.

The problem of instructors is more serious; it is a phase of the larger question as to the advisability of harnessing creative minds. It is quite true that, as Professor Stanley of Ann Arbor has said, regarding Professor Paine at Harvard, "his influence as a teacher has been very great, and for many years he has been an inspiration to the men who have been under his instruction, while his example has been of incalculable benefit to American music"; it is also true that Professor Paine trained about a score of the best-known composers, teachers, and critics in this country. Yet it is likely that he would have done still more for the honor and profit of American art if he could have converted the energy expended in teaching into creating more of his splendid orchestral works. The same can be said of Mr. MacDowell. The years he spent at Columbia were so exhausting that there was not enough energy and impulse left for as large a number of his inspired compositions as his admirers had a right to expect of him. Apparently, therefore, one must advise our universities to keep their hands off our composers. To be sure, the poor fellows have to live; perhaps, some day, the generous rich will take account of and make provision for them.

THE HEIR TO THE GERMAN THRONE.

The marriage of the German Crown Prince has naturally aroused widespread interest in the bridegroom, whose influence upon the future of Europe is certain, if he lives, to be very great. So far, comparatively little has been known abroad about him, save that he is just twenty-three, and has been attending the University of Bonn, where his father and grandfather, too, put the finishing touches to their education. That he has had the usual stern training given to a

Hohenzollern, goes without saying. If character can be formed, and the moral decadence so apt to come with the possession of royal powers can be avoided, by a course of simple living, strict discipline, and hard brain work, the future Emperor is certain to be as fine an example of strenuous and honorable activity as his father. The young Hohenzollern princes may well look with envy upon their contemporaries in the nobility; they, at least, know no such strenuous life, so barren of soft pleasures, as falls to the lot of a son of the German Emperor—at least until he goes to the University.

The very simplicity of this well-understood training takes away in Germany much of that interest, if not divinity, which doth hedge about a future ruler, as well as an actual king, until such a notable event as his marriage attracts popular attention. In this case it has already resulted in the publication of a number of pamphlets and newspaper articles designed to reveal the real Prince to his future subjects. The most interesting is from the pen of a "Fellow-man," as he writes himself on the title-page of 'The German Crown Prince in the Light of Our Times.' This "Fellow-man" is Willy Seibert, the Prince's former music teacher at Bonn. Fantastically written as the book in many respects is, far too full of Herr Seibert's own views on music and politics, it is none the less an honest and earnest attempt to give an unbiassed sketch of a young man who, in outward appearance at least, is merely a typical blond young German, trim and slender in his handsome uniform, and rather proud and cold in his bearing. From the very first the Crown Prince has suffered by comparison with his younger brother, Prince Eitel Friedrich, who, as a golden-haired child, developed a charm of personality that has made him to-day far more familiar to the people and much better liked than the older and more reserved Prince.

Both are simple and unaffected young men, Eitel with all the love of a frolic to be found in the average American collegian. But all his readiness not to stand upon his royal dignity did not make the Crown Prince popular at Bonn. He failed to join in the student drinking bouts with all the enthusiasm of the average *Korpsstudent*. "He has not enough thirst, he will not *guzzle*," was the regretful, but to most people complimentary, judgment passed upon him by his fellows of the "Borussia." And his tutor vouches for the fact that the Prince's alleged infatuations for certain singers, actresses, and American beauties, so vividly described by sensational journals at home and abroad, are of the idle stuff of dreams. Only one innocent amour he allows him. But the son of his father could not fail to have a liking for sports. A daring horseman, he is also devoted to tennis, to rowing, and to automobiling. Student duelling he has never cared for, and his democratic insistence on visiting middle-class families, which deeply offended the officers of the Bonn garrison, is a hopeful augury that he will have less sympathy for snobbish military aristocrats than has marked the present Emperor. None the less, he is, we are told, "a soldier at heart." Like all the Hohenzollerns, he is a lover of music, but even his teacher cannot make him out other than a fair performer on the violin.

Herr Seibert gives us his word that his royal charge is politically unprejudiced. He notes with satisfaction that, on hearing a lecturer praise the Hohenzollerns as defenders of free speech, the Crown Prince spoke up loudly: "So it has been, and so it always will be." If we may trust this Boswell, the heir to the throne is distinctly clever, of calm judgment, and with unusual insight into character. He is, however, evidently not of an original mind, and he is content to accept his religion as a good Hohenzollern defender of the faith should, with scant regard for the new philosophy that would undermine the faiths of old. Altogether, he is reputed to be far more like his great-grandfather, the narrow William I., than his brilliant father. Like them both, he has a keen sense of duty, certain to keep him steadily in harness.

So much for the "present view." Time alone can show whether it is as far from the truth as were most of the judgments about the present Emperor when he was so suddenly called to the throne, after only a few months' emergence from the comparative obscurity of a mere Prince of Prussia. The impulsiveness then attributed to the sovereign has proved less dangerous than was feared, and, so far from being a devotee of war, as his early utterances portrayed him, he has, like his uncle, the King of England, done his best to preserve peace among nations. It cannot be said, however, that the Kaiser has pleased his subjects by his choice of a bride for his son. The Mecklenburgs have not played too noble a part in their country's history, and, to come down to present times, the mother of the bride has, rightly or wrongly, been so *non grata* to princes and people that her presence at the wedding ceremonies had not been expected. But there are few princely German families from which an heir to the throne can choose a consort, and in this case, it is alleged, as so often when royal lovers wed, that the young Crown Prince's affections coincide with the will of his Imperial father.

THE HARVARD MEMORIAL WINDOW IN SOUTHWARK CATHEDRAL.

LONDON, May 22, 1905.

Mr. Choate's last public appearance as American Ambassador took place this afternoon in St. Saviour's Church, this month formally proclaimed to be the Cathedral of the new Bishopric of Southwark. Situated close to the Southwark end of London Bridge, this fabric, being one of the oldest churches in London, is undergoing enlargement in various ways in order that it may suffice for the growing needs of the vast population of the Surrey side. Its construction goes back to the thirteenth century; from belonging to an old Augustinian Priory, it was, in 1540, converted into a parish church. Three hundred years later, in 1840, its nave was demolished to make room for what cannot be deemed a wholly pleasing modern substitute. One of the alterations made, apparently at this time, was the walling up of the four Norman arches by which the old Chapel of St. John the Divine (where John Harvard, whose father was buried near by, was baptized on November 29, 1607) communicated with the north transept and adjacent parts of the church. The sole window in this chapel, now used as a vestry, is filled with stonework, designed by Mr. C. F. McKim, and glazed with three lights designed and executed by Mr. John La Farge. Above are the arms of Great Britain, Harvard University, and Emmanuel College, while below are three Biblical scenes, with St. John and the baptism of Christ at the centre, and the record of John Harvard's baptism blazoned below the whole. The liberal proportions of this window give ample scope for glowing effects of color such as only La Farge knows how to achieve, and are in contrast with the small dimensions to which the quondam chapel has been reduced since 1840.

A plan is on foot to undo the immediate past and restore the smothered Norman arches by opening out the chapel, which might then be suitably known as the Harvard Chapel of St. John the Divine. Meanwhile to-day's ceremony had to take place in the ancient Ladye Chapel, from which the window was not visible. The Ambassador with the clergy proceeded to the chapel and unveiled the window, returning thence to the crowded assemblage—a very representative one—among which were noticeable delegates from Oxford and Cambridge Universities. Emmanuel College, of course, was conspicuously present on an occasion so nearly concerning it, nor were graduates of Harvard lacking.

At the beginning, the American flag was flying from the Cathedral tower and the window was covered by a second American flag. This last was removed by Mr. Choate, and then Dr. Talbot, Bishop of Rochester, in whose diocese was the whole Surrey side of London until the creation of the Bishopric of Southwark, declared that the Harvard window was in a chapel—henceforth a Harvard chapel—dating back four or five hundred years beyond John Harvard's christening day. Americans in visiting it might remember "the rock from which they were hewn." Englishmen would see in it a proof of filial and brotherly attachment. Summoned to speak his mind as the donor, Mr. Choate touched upon "abiding relations of friendship" happily uniting England and America. Born at the Surrey end of London Bridge, baptized here three centuries ago, educated at Emmanuel while Milton was at Christ's, John Harvard, like Milton, was a scholar and of pious life. Seeking larger

freedom in Massachusetts, he died "prematurely, as it then seemed, but in the fulness and perfection of time, as is now manifest." Touching then upon his part in founding Harvard, Mr. Choate quoted the quaint colonial record, and dwelt upon the two mottoes of Harvard University, which, strong in prestige and renown, rich in endowments, and richer still in the loyalty of her sons, was "not unworthy to be compared with Oxford and Cambridge, from which it drew its first life." "A radiating source of light," Harvard and its sons had had their full share, he said, in all the great movements which have marked the progress from "that little handful of storm-swept immigrants on the Atlantic coast to the imperial republic of to-day." In our own day Harvard had sent forth Phillips Brooks, "to be a pillar of Christ and the Church (*Christo et Ecclesiae*), and Theodore Roosevelt, to be a champion of the truth (*Veritas*)." He echoed the wish of Dr. Talbot that the memorial window might be a place for reviving the kindred attachment between England and America. Harvard was as surely the offspring of Cambridge and Oxford, and own daughter of Emmanuel, as Old England was the mother of New England. Of one hundred early teachers at Harvard who came from Oxford and Cambridge, seventy were from Cambridge and twenty from Emmanuel. "Take fast hold of instruction; let her not go, for she is thy life," was the closing utterance of the speaker, who added thanks to the Dean and Chapter and to Mr. La Farge.

The Archbishop of Canterbury then gave succinctly a genial account of the foundation of Emmanuel by Sir Walter Mildmay, and made appropriate allusion to the contribution of John Harvard in founding the American offshoot of Sir Walter's college. Having touched feelingly upon the signal good offices of the donor in cementing Anglo-American friendship, the Archbishop spoke of the Church of St. Saviour's, linked "with the storied past of England, with Chaucer, Shakspere, Bunyan, and many more," and now "springing this very month into new life" as a Cathedral.

Mr. James Bryce, the last speaker, dwelt on Harvard's history and influence. Founded under Sir Harry Vane, "young in years, but in sage counsel old," Harvard had taught the subjects of the day with thoroughness. She had done more for her pupils than Magdalen for Gibbon, or Balliol for Adam Smith. She had formed the mind of Boston, which in turn formed the mind of New England. Above all, she had always had the generous support of her sons, who had for generations poured out money for her every need. Harvard had 5,000 students to-day, of whom one-third designed themselves not merely for the professions, but for some trade or commerce—a point which deserved attention from English universities. In a country where wealth was eagerly sought and swiftly made, reverence and love for learning were supremely important. This was recognized in America, where universities were loved and freely (too freely, perhaps) endowed—for even universities might suffer from having too much wealth. Two-thirds of the Harvard students came, nevertheless, from humble homes. Mr. Bryce concluded by picturing the unique position of influence enjoyed in America to-day by college presidents, and closed with an emphatic declaration that the universities and the church were the best elements in American life.

LOUIS DYER.

THE SALONS.

PARIS, May, 1905.

I suppose it is inevitable that, with the years, the new Salon should fall into the respectable mediocrity from which the artists who formed it hoped to escape when they seceded from the old Salon. In the early nineties, the contrast between the two exhibitions was enormous. Whatever the seceders made of theirs in the beginning, they certainly managed to avoid respectability and mediocrity both. Indeed, they preferred rather to go to any extreme of outrageousness or eccentricity. What they produced as a result may not have been great art, but it revealed at least an effort, a striving, on their part, to see and express things for themselves; at least a consciousness that the development of one's individuality is better far than an unintelligent repetition of the old and exhausted formulas of the schools. The new Salon at the Champ de Mars may have been full of the sensational in motive and method—those were the days of Rosicrucianism and the Scriptural subject in modern dress, the days of *plein-airistes* and *pointillistes*, and the innumerable *istes* now forgotten; but there was life, there was movement, and movement in any direction is better than stagnation. The new Salon at the Grand Palais des Beaux-Arts, however, has turned its earlier experimenting into conventions as benumbing as those of the older society, and, really, between the two exhibitions there is no longer very much to choose.

The older men at the new Salon seem to have lost their freshness of vision and observation as entirely as the older men of the Salon they deserted that they might preserve their independence; they now paint according to a cut-and-dried recipe. If, at the old Salon, one can count beforehand on the barren sweep of Pointelin's landscapes and the tragic grayness of his skies, on the romantic dignity of Harpignies's accomplished design—and the pictures of these two men are among the few one stops to look at in the more conservative exhibition—so, at the new Salon, one is sure beforehand of the mysterious fog in which Carrière's sitters will be enveloped, of the meretricious elegance of Carolus-Duran's portraits, and the amazing caricature of Boldini's. The painter who refuses to look at nature save through a chosen convention, even if it be one he has evolved or invented for himself, is bound sooner or later, and usually sooner, to come to the end of his resources. Not the greatest can escape. Take, for instance, Carrière; it is as if, nowadays, he sacrificed everything in his pictures to the atmosphere which was their charm in the beginning, but has now deteriorated into something perilously like a *cliché*. In this year's portrait of an elderly man and woman, there is little or nothing of the character so strong in his "Daudet" and many of his earlier portraits, none of the grandeur of design that was the distinction of his interior of a theatre shown but a few summers ago. And so Boldini has become more and more absorbed in the amusing and eccentric lines, the delicious absurdities of modern modes, until half the time, when women sit to him, he produces not a portrait, but a mad parody of a fashion plate. Of his two portraits of women now at the Salon, however, one is, for him, reticence itself—in atonement, as it were, for his unpardonable exaggerations of last year, though these, slightly modified, are repeated in the second, a full-length of the most Parisian of Parisians. But he has also been painting a man in matter-of-fact everyday coat and hat—a portrait in which the character, to the very angle at which the hat tilts backward, is unmistakable, for in his portraits of men he must seek his amusement necessarily in character rather than in costume, and therefore they usually show him in his more sober mood.

Unfortunately, M. Besnard exhibits nothing but a portion of the ceiling he has designed for the Théâtre-Français; Apollo and the Twenty-Four Hours his subject. As seen on the walls of the Salon, the color scheme is confused, and the clouds that pile themselves up in great masses below the orange circle of the sun are solid and lumpy. But it is unfair, it is impossible, to judge a ceiling when hung as a picture, and a small model of the entire design is far more promising. Of other older men—men like Lhermitte, Roll, Billotte—there is little to be said. The names attract now rather than the work, upon which constant repetition of well-approved formulas has left its mark. Even the men of a younger generation, those who were "the younger men" in the early days of the secession, are not able to resist the apathy of the moment. M. Aman-Jean's portraits, though they retain the old grace and the old tenderness of color, are fading into anæmic shadows of those decorative presentments which, when first shown, took the artistic world by storm, but which, at their strongest, were never exactly robust. M. Simon's determined realism has led him to a statement of fact so prosaic, so dull, that his large group of this year—"Soirée dans un atelier"—is about as interesting as a photograph. The camera could have got as much, or more, out of the effects of light in a studio at night, and out of the people gathered there—M. Cottet conspicuous among them. M. Simon, in his eagerness to paint precisely what he sees and nothing else, apparently forgets that everything depends not on what but how he sees.

It is not a little to M. Cottet's credit that he has realized the danger lurking in repetition, and, at the risk of a loss of popularity, has struggled to break free from the Breton subjects the public have come to look for from him. He has been to Spain; he has discovered Segovia, Salamanca, Avila, those strongholds of the romantic; he has done his best to show the might and majesty of a great Spanish cathedral, the grimness and impressiveness of the old walled and battlemented Spanish town. But, after gray Brittany, the sunshine of Spain has bewildered him. His blue, cloudless skies are flat; cathedral and town are cut out in hard outline against it. He has had to wait for the storm or the cloudy day to see atmosphere in a land where the atmospheric conditions are so new and strange to him. Spain does not reveal herself on a first visit. One must know the country to realize the truth, as well as the beauty, of Velasquez's landscapes, where the sunshine is always tempered. M. Cottet might also, without much loss of time, have

chosen finer and more picturesque points of view. However, no matter from where you look at them, these three Spanish towns build themselves up into a romantic composition, and it is something that the artist should have tried to paint them as they are, instead of presenting them according to a familiar recipe for light and color.

I wish I could say as much for M. Gaston La Touche, whose earnestness in attacking a certain problem of light was at the start the great merit of his pictures, and made them, even when he failed in his solution, worth studying. But now that he has mastered the problem, now that he has learned the secret of rendering sunlight falling through green foliage, or lamplight shining from under a green shade or in a green-toned room, he seems afraid to venture upon any new experiment. All that is left is to vary the subject he illuminates with this golden-green light—and to concentrate one's attention upon subject in France is to come to the tale of intrigue as inevitably as, in England, it ushers in the sentiment of the baby, the dog, and the mustard pot. M. Ménard, on the other hand, is not even at the trouble to vary his subject, but goes on rendering the same low-toned landscape under the same pale skies, with the same clouds he painted so well low on the horizon. Among the portrait painters, M. La Gandara shows no less the evil effects of repetition. He, who was at one time spoken of as a rival to Whistler, has allowed his interest in the sheen of silk and satin, in the flow of draperies, to engross him more and more until, really, the women in his two large portraits this year are no better than puppets, red-cheeked dolls, manikins on which to display a pretty fashion.

If I seem to be dwelling chiefly on this tendency to repetition—a tendency doomed to result in stagnation—it is because, to me, nothing is more marked in either Salon. Some of the French critics have been lamenting, as the reason of the dulness of this year's exhibitions, the increasing influence of Whistler and Carrière, which means, so they say, dreariness and sadness in the followers, a dirtiness of color, an emptiness of design. But though this influence does manifest itself in the painting of some of the younger men, it is far from prevailing, and, still suffering as I am from the prismatic fireworks of men like Eliot and Roll and Montenard in the new Salon, the blinding brilliance of Sorolla in the old, I cannot very well join in the lament. It is rather to the benumbing influence of formula, whether of tradition or of the individual, that the dulness—upon which every one agrees, whatever is suggested as cause—must be attributed.

Zuloaga, though it is but a few years since his name was heard in the Salon, since his warmest admirers proclaimed him the modern Velasquez, appears already to have exhausted his originality. His Spanish types have lost their life and piquancy; the animation of the women, with their powdered faces and gay shawls, might be machine-made, so perfunctory does it seem, while what passed for breadth of technique has deteriorated into coarseness or carelessness, and the hasty marks of his big, heavily-charged brush are so many proofs of the truth of Whistler's teaching, that a picture is not finished until all traces of how it was done have gone from it. Garrido, too—it may be out of deference to his patrons—seems to have stereotyped the face of his little model, and the smile with which she looks out now from almost his every picture. Of all this Spanish group, Anglada is most successful in retaining his inventiveness and remaining personal without becoming mannered. He has been studying the phenomena of color and light in a Spanish poultry market at night, and on his canvas the confused mass of gorgeous plumage, suddenly emerging from the shadowy background, is as strong and brilliant and bewildering in color as he must have seen it to produce an effect so obviously true.

I know it is not easy to draw the line between personality and mannerism. Some of the painters whose work stands out with most distinction, have developed a style so entirely their own that it might seem mannered were it not so well subordinated to the rendering of the impression they wish to record. The paintings of Mr. Morrice, for one, are so personal that they could not be mistaken for any one else's, but so far he has not let this expression of his personality become a mere trick of technique. His work, if not very strong, always has charm; and again this year, in his Southern bull-ring as on his Northern seas, in his circus as in his open square, you feel his sensitiveness to harmonious color, his feeling for decorative design. Nothing could be truer than his circus, but it is no bare statement of fact like M. Simon's huge studio; it is the circus made beautiful by the wide sweep of its curves, the tender depths of its shadows. At times M. Le Sidaner threatens to overstep the line into mannerism; but this year he shows he can see beauty of light and atmosphere in the crowded Paris street as in the little provincial *place*. The kiosque with its flaring posters, or the red hat of a passing figure, is to him as lovely as the blossoms in a lamplit garden or the gold of the autumn trees. Mr. Maurer is another of the younger men whose work has not lost its interest. He is still preoccupied with types unpleasantly coarse, but the honest study of character in his two full-length portraits of women, as in his ballet girl of two years ago, redeems them from vulgarity. Better, however, are his café and garden, both amusing in perspective and full of ingenuity in arrangement. Mr. Maurer has not ceased to be the student; one hopes for much from him when he eventually finds himself. Mr. Frieseke would do well to borrow (for an interval, anyway) Mr. Maurer's subjects, his danger lying in over-sweetness of color, over-refinement of design. His large nude, "Femme Nue," is the most ambitious of his canvases I have seen, but the figure of the woman stretched upon the couch might just as well not have been there, so secondary is it in interest to the arrangement of rose in the draperies and wall-paper. His two or three smaller canvases are reëchoes of pictures already exhibited. Nor do I think that M. Caro-Delvaille fulfils the promise held out two years ago by that large family portrait group bought for the Luxembourg. He has not renounced his ambition; the recognition of his fellow-artists has not failed him. His several portraits, surrounding an idyl of "September," fill a centre in one of the larger galleries. But he has grown self-conscious. In his "Madame Edmond Rostand" and his "Mademoiselle Jeanne Rolly," the pose is forced, the costume is deliberately eccentric, and the eye wanders involuntarily from the figures, where it should rest, to the beautifully painted flowers here on a table, there on the mantel; or to a glimpse of the blue night through an open window. The idyl, with its group of irrelevant figures in a romantic landscape, may have been intended for a modern version of Giorgione's "Fête Champêtre"; but it is without any of the qualities such a subject calls for.

Mr. Sargent is represented only by the "Duchess of Sutherland" from last year's Academy, a portrait which strikes the French critic as the superficial shadow of Sargent at his best that I found it when I saw it in London. There are portraits by several of the Glasgow men, notably Sir James Guthrie's "Miss Jeanie Martin"; but of these I have written when they were in different London exhibitions. M. Thaulow, as of old, impresses one by the truth of his studies of water and snow. M. Lobre attracts by his delightfully rendered little interiors; the cathedral of Chartres and the splendor of its glass suggesting some of his latest subjects. There may be many other good things hidden away in a collection so huge that, with the best will in the world, it is impossible to see everything. Of what one does see, there is unquestionably so little of importance, so much of colorless commonplace, that one finds one's self turning with amusement to Veber's grotesque fantasies, or with relief to the vigorous downright realism of Hochard's provincial types, as grotesque in their way.

Another fact I should point out is the absence of many of the Americans who were faithful exhibitors in the new Salon—Alexander, Humphreys Johnston, Walter Gay, Dannat, Eugene Vail; all, for the time, anyway, have vanished. Mr. Melchers remains, showing a full-length portrait of a peasant girl in costume—and also Mr. Childe-Hassam, who has several brilliant landscapes, and Mr. Alexander Harrison, whose seas, I must confess, have lost the freshness of their charm.

The sculpture and the black-and-white have not escaped the general dulness. As ever, the ability revealed by the sculptors in both Salons is appalling when one considers how little great work comes of it all. This year, to make matters worse, M. Rodin has nothing very remarkable like his "Penseur" or the monument to Victor Hugo; no colossal failure, even, like the Balzac. His bust of M. Guillaume is a fine, nervous rendering of character, but it cannot hold or fascinate one in quite the same manner, and the large cast of his study of a figure was in last winter's International. Nor can M. Bartholomé's "Adam and Eve" be accepted as one of his masterpieces. The black drapery about two small bronzes by Constantin Meunier is a reminder of the great loss modern sculpture has incurred within the last year.

The days of experimenting, of brilliant innovation and daring departure, seem to have passed for draughtsmen and engravers. There was a time, not so long ago, when one wanted to examine carefully every drawing and print, when there were few that did not present some interesting technical problem, or work out some splendid

or at least startling design. But now it is the other way about, and there are few that call for special attention by any originality of method or fine accomplishment. Artists like M. Louis Legrand, M. Chahine, Mr. MacLaughlin, M. Milcendeau, M. Luigini continue to exhibit in the new Salon; artists like M. Dillon, M. Bauer, Mr. Pennell, Mr. Wolf in the old. But I might note many absences this summer, and the once high level of achievement is hardly maintained. The extraordinary part of it is that, despite the fatigue and exhaustion facing one in every section of both exhibitions, the number of exhibitors does not decrease. Indeed, the new Salon this year has opened new rooms for the paintings, the autumn Salon is only less large than the two older shows, a Société Nouvelle has been launched. It seems a pity, for there is a saving remnant out of which one good, strong, if comparatively small, exhibition might be made.

N. N.

OPEN-AIR PARLIAMENTS IN SWITZERLAND.

ZURICH, May, 1905.

The biographer of Prof. E. A. Freeman says that Freeman could never breathe quite freely in a country which was not under some form of popular government, and that Switzerland was to him one of the most delectable of all countries, because it was essentially a land of freedom in which some of the most primitive Teutonic customs were preserved almost without change. An Irishman may fully share that feeling when he visits a country where there are no landlords, no privileged classes, and where the executive and judicial officers receive each year directly from the hands of the sovereign people their mandates and commissions of office.

Most persons know that Switzerland is a federated republic, consisting of twenty-two States, each of which is sovereign, so far as its independence and legislative powers are not restricted by the Federal Constitution. Each has its own system of government, based on the principle of the absolute sovereignty of the people. The total population of the republic is three and a third million souls, and, three of the cantons having divided themselves into half-cantons, the smallest self-governing area, Basel Stadt, contains only fourteen square miles, while the least in population is the half-canton of Nidwalden, with 13,000 souls. In seven of these States the people exercise their legislative powers directly without the intervention of any parliamentary machinery. Once a year at least, and at other times if necessary, the voters meet in the open air, approve or disapprove then and there of their laws, budgets, taxes; elect their administrators and judges and their representative to the Federal State Council. Freeman reckoned it one of the highest privileges of his life to have been present at one of these open-air parliaments, of which every voter is a member.

The cantons in which these "Landesgemeinden" still exist are Uri (population 20,000), Schwyz (55,000), Obwalden (15,000), Nidwalden (13,000), Glarus (32,000), Appenzell, Exterior (55,000), Appenzell, Interior (14,000). The procedure at the Landesgemeinden is not exactly the same in each canton. I shall describe what took place at the two I attended—one in Uri, the other in Nidwald.

Uri Landesgemeinde is held on the first Sunday in May. Official notice, and the business with which the meeting is to deal, are published beforehand by the Cantonal Council. Notice must be given in writing of amendments or new proposals. For any change in the Constitution, the demand must be made in writing by fifty voters. Every citizen who has attained the age of twenty years can vote and speak at the Landesgemeinde. At Uri the business this year was: (1) Filling a vacancy in the Cantonal Council, which is reëlected every fourth year; (2) election of Landamman, or president, a vice-president, and two representatives to the Federal States-Council at Berne, each for one year only; (3) election of five members of the Supreme Court for four years, and acceptance of the resignation of the president on account of deafness; (4) election of four members of the Criminal Court—term of office four years; (5) election of four members of two district courts—term of office four years—together with substitutes in case of unavoidable absence of the regular members; (6) law relating to Cantonal Savings Bank; (7) consideration of a proposal made by sixty-seven voters for a change in the law affecting markets. Time of meeting, noon.

At eleven o'clock the square and principal streets of Altdorf were full of people, and a procession was formed. In front marched two heralds in fantastic uniforms, half-yellow, half-black, with large white frills and cuffs, plumed hats, and the celebrated wild-bulls' horns of Uri, which had been blown at the battle of Morgarten, slung round their necks. A brass and a drum band followed. Then came the troops of Uri—sixty soldiers in blue and gray, followed by twelve police. Four carriages contained the principal State officials, and seven important-looking persons in cocked hats and long gowns, one side of which was yellow and the other black. These were the Landweibeln, sergeants or beadles, who were to decide all questions as to the voting. The crowd—men, women, and children—walked alongside or after the procession, the band and the drums playing alternately. Two miles we trudged in blazing sunshine on the main road, then up a lane to Bözlingen, the place of meeting.

On a level sward a temporary structure of tiers of benches was provided for the voters; in the centre was a table and two chairs. From the level a talus sloped up for 100 feet or more to a mighty and sheer cliff seven or eight hundred feet in height. Above this was a ledge of pasture dotted with pines, then steep forest for about 2,000 feet, then rocks and snow. The green floor of the valley, about three-quarters of a mile wide, was dotted with enormous pear, cherry, apple, and plum trees in full blossom; on the opposite side pasture, forest, rock and snow towered steeply for nine or ten thousand feet.

The senior of the yellow and black-gowned sergeants opens the proceedings with a short proclamation. The Landamman is seated at the table in the centre of the ring, the secretary beside him, the sword and mace of Uri deposited on two drums beside them. Both sit hatless in the hot sunshine. The tiers of benches are packed close with voters; sentries are posted at each entrance; the spectators on the slope can see all and hear some.

Proceedings begin punctually at noon. The Landamman speaks for about 20 minutes, turning to all parts of the ring, ending with a short prayer, during which all uncover. The first business is his own election, and he takes his seat among the crowd on the benches. The vice-president puts the question, and the Landamman, reelected without opposition, returns to the table. He speaks again at some length, explaining the business of the day. Then follow speeches from the crowd of electors. The speaker stands up, uncovers, uses no notes, and seldom exceeds fifteen minutes; some speak only for a minute or two; some gesticulate; others, hat in one hand and umbrella in the other, are motionless. The President puts the question, names each candidate, and calls for a show of hands. "Hebe die Hände vorüber," he calls in a clear voice. The seven sergeants are on a slightly raised bench; they look keenly around; to count the hands raised would be impossible, for there are over 2,000 electors in the ring. If they cannot decide, the sergeants ask for a second hand show, and finally announce their decision, saying the first, second, or third division is recognized ("Erste Entscheidung ist erkannt, Landamman"), the senior generally speaking after consultation with the others. I am told that a division or actual count is never taken here. The decisions announced were never questioned. Some speeches provoked a little laughter, but during the entire proceedings there was never applause, groans, dissent, approval, or cheering of any kind, from either voters or spectators. There was no parliamentary disorder of any kind. If two speakers rose together, one immediately gave way and waited for his turn. No speech was ever interrupted; perfect silence prevailed. The "ring" is of course reserved exclusively for voters, with the exception of the boys, who, when they could find room, sat as quiet as mice, and never attempted to raise their hands when a vote was taken. Although the tenure of the executive officers is for only one year, it is usual in this canton to reëlect the same persons year after year.

It occurs to one to ask what is done if the day is not fine. I was told that the meeting was held here rain or shine. In the adjoining Canton of Schwyz, the Landesgemeinde was summoned for the same day as in Uri to meet in a meadow, but with an announcement that, in case of bad weather, it would be held in the church. Sunday is a usual day for municipal and other public business. The better the day the better the deed. Like Alexander Severus, men here deem the service of mankind the most acceptable worship of the gods. In this respect there is no difference between Catholic and Protestant cantons. Some years ago I attended the voting on a referendum question in the Protestant Canton of Vaud. The vote was taken in the parish church after morning service. The mayor sat at a table on which was a ballot box, called out the list of voters in alphabetical order, and each man present dropped his voting-card into the box.

The other Landesgemeinde I attended was that of Nidwald. Here every male citizen over eighteen is entitled to vote. The business was election of Landamman, vice-president, and a cantonal representative

to the Federal Chamber, each for a term of one year; the election of a State Secretary; a proposal for a licensing law increasing the tax on hotels and inns in proportion to their size and the business done; fixing the land tax for the ensuing year; authorization of some new roads. It is not the practice here to elect the same Landamman year after year, but to appoint him vice-president in alternate years; the vice-president becoming the Landamman. The important business of the day was the election of the secretary and the licensing law.

The procession marched from Stans, the State capital, and deposited flags and weapons in the ring, which was hardly large enough to contain all the voters. It was very different from the Uri meeting-place. A quadrangle thirty yards by twenty-four was enclosed by a stone wall, less than three feet high, coped with flat stones. Fourteen large chestnuts grew close to the wall, their leaves roofing in the enclosure. Rough benches provided sitting accommodation; at one end was a stone daïs, on which stood the Landamman, the vice-president, the secretary, members of the Cantonal Council and four sergeants in red and white cloaks. Not only was the ring packed with voters, but they stood three deep on the wall coping. "Veni Creator" was sung, and then the Landamman gave a short address on general Swiss politics and events of the year. Everything was free and easy; the voters sat with coats off and hats on; most of them smoked; speeches were received with shrill but not prolonged cheers.

The two contentious items of business were the licensing law and election of the State Secretary. Most of the speeches were very short. The licensing law was carried by a show of hands, but the sergeants could come to no conclusion as to the voting for the Secretary. A count was directed by the Landamman, on which all voters left the ring and ranged themselves in two parties in a large meadow adjoining. Each party was accompanied by its friends the sympathizers, women, boys, children, and non-voters. The sergeants marshalled the voters out of the crowd, and they then marched four abreast between the four sergeants, two of whom stood at each side. First one party was counted, and then the other, with the result that the Liberal received 1,211 votes, and the Conservative 1,023. The division took fully an hour, and the result, when announced in the ring, was received with loud and shrill cheers. At both meetings every one was well and neatly dressed; many of the women bareheaded, with ornaments in their hair. At Nidwald about half the men wore short dark, fine cloth blouses, open at the neck embroidered with yellow, red and blue silk.

In 1291 the cantons of Uri, Schwyz, and Unterwalden formed a league of perpetual alliance, "to maintain their freedom and to keep up good order in their mountain valleys." They have done so, and gathered round them the group of States which forms the present Swiss republic. Their condition refutes Sir Henry Maine's opinion, given in his 'Popular Government,' that "it is not by political societies in any way resembling those now called democracies that human improvement has been carried on." Throughout Switzerland, and especially in these original cantons, democracy is both a real form of government and a state of society. Government is economical, cheap, efficient, and thoroughly in accord with the wants and wishes of the people. Laws can be, and when necessary are, quickly and easily changed. There is absolute security that such laws as are made shall be in accordance with the wants and wishes of the majority, and that the executive officers shall be persons who possess the confidence of the people. The initiative and referendum secure the same result for those cantons where the Landesgemeinden do not exist, as well as for the whole Federation. The system of primary education is the best in Europe, and the fact that 40 per cent. of the students at the Zurich Polytechnic are foreigners, is evidence of the excellence of the higher education.

One hundred years ago Switzerland was the battlefield of Europe. It was torn with internal dissensions. The country was ravaged, cities sacked; men, women, and children put to the sword. A democratic constitution, a popular and flexible system of local government, have made her one of the most progressive, contented, and internally peaceful countries in Europe. Her beautiful villages, well spread out, equipped with splendid schools, good water supplies, public weigh-bridges, suitable municipal buildings, absence of pauperism, wise provision for the care of the poor, the orphans, and the helpless, make a striking contrast with Ireland, which has not been the field of great wars since the time of Cromwell. Yet Ireland looks as if it had been ravaged by invading armies and never recovered. Its fertile districts depopulated, its urban and agricultural slums, ruinous towns, decaying or vanished villages, gigantic workhouses, mean and insufficient schools, attest what? Misgovernment and maladministration of the heavy taxes levied in a way and for purposes which the people object to, and from which they derive little benefit. Admittedly, we have the worst educational system in civilized Europe. Our system of local government is prescribed at Westminster, and controlled by boards, judges and officials appointed by the English Government, and hostile not only to every principle of popular government, but, with few exceptions, to their fellow-countrymen. They owe their positions to a foreign country. Members of Parliament are prevented from addressing their constituents. Municipal and county councillors are frequently imprisoned. It is a claim on public esteem to have been in jail on the sentence of English-appointed judges, or to have been beaten by the military force miscalled police. Public meetings are prohibited and broken up by violence at the will of the Government.

But Switzerland, not Ireland, is the subject of my letter. M. O'B.

Correspondence.

A BIOGRAPHICAL DIRECTORY OF AMERICAN MEN OF SCIENCE.

To the Editor of The Nation:

Sir: The undersigned is compiling a Biographical Directory of American Men of Science. It was begun as a manuscript reference-list for the Carnegie Institution of Washington, but arrangements have now been made for its publication. The book should be ready in the autumn, nearly 4,000 biographical sketches being in type. The proofs have been corrected by those concerned, but, in order to secure as great accuracy as possible, a revised proof will be sent in the early autumn.

This letter is written with a view to securing biographical sketches from those living in North America, who have carried on research work in the natural or exact sciences, but who have not received proof of a sketch for correction. Some of those who were asked to send the information required did not reply, even in answer to a second and third request, and there are, of course, many who should be included in the work, but who for one reason or another did not receive the request for information.

It is intended that each biographical sketch shall contain information as follows:

(1.) The full name, with title and mail address, the part of the name ordinarily omitted in correspondence being in parentheses.

(2.) The department of investigation, given in italics.

(3.) The place and date of birth.

(4.) Education and degrees, with dates.

(5.) Positions, with dates; the present position being given in italics.

(6.) Temporary and minor positions.

(7.) Honorary degrees and other scientific honors.

(8.) Membership in scientific and learned societies.

(9.) Chief subjects of research; those accomplished being separated by a dash from those in progress.

The undersigned will be under great obligations to those men of science who will send him biographical sketches of themselves, or will secure sketches from those who should be included in the work. These are those who live in the United States, Canada, Newfoundland, Mexico or Cuba, and who have contributed to the advancement of one of the following sciences: Mathematics, astronomy, physics, chemistry, geology, botany, zoölogy, pathology, physiology, anatomy, anthropology, psychology.

The compiler of the book hopes that any assistance given him to make it as complete and accurate as possible will be at the same time a contribution to the organization of science in America.

J. McKeen Cattell.

Garrison-on-Hudson, N. Y., June 2, 1905.

A DISCLAIMER.

To the Editor of The Nation:

Sir: The review of my 'Handbook of Greek and Roman Sculpture' in the *Nation* of May 25 contains the following statement: "It is doubtful, however, if the mantle of charity can cover his occasional reflections upon the Boston Museum of Fine Arts, an institution to which he, in common with all students of ancient art in New England (not to say in the United States), is deeply indebted." Since your reviewer does not specify, those who do not know me may believe me to be ungrateful, while some of those who are familiar with my work may believe that whatever

"reflections" I have made are justified, in spite of the disapproval of your reviewer. The remark, therefore, appears to me to be unfair, both to the Boston Museum and to me.

I have referred in my book to the Boston Museum in two ways: in discussing those of its marbles of which I publish reproductions, and in citing statements of its Official Catalogue of Casts.

In discussing its marbles, I have treated the Boston Museum, like all other museums, in accordance with a principle stated in the preface: "Much attention has been given to accurate statements of the provenience and the restorations of the monuments, and with unfailing persistence the neglect of museum authorities to publish them has been noted." When I, therefore, remark that no information concerning a Boston statue has been published, I do not make a "reflection" in the implied sense of your reviewer, but state a fact, the existence of which I, for one, sincerely regret. Would any one thank me for keeping silent in so weighty a matter because I am in many ways indebted to the Boston Museum?

My references to the Official Catalogue of Casts follow another principle stated in the preface: "The author has refrained as much as possible from refuting erroneous views. Only when such views have gained currency in popular books has he felt obliged to attack them and to show their errors." The Boston Catalogue, which I characterize in the Bibliography as "conveniently arranged, . . . very valuable; the Boston Museum contains one of the best selected collections of casts to be found anywhere," is one of the most popular books on the subject. I have, therefore, felt obliged to discuss the views of this Catalogue whenever I have come to different conclusions from those advanced there. Should the writer of a book refrain from pointing out mistakes in an earlier work merely because the previous author is his personal friend, and the work the Official Catalogue of an institution which for years has been most generous in affording him facilities for teaching and studying?

EDMUND VON MACH.

CAMBRIDGE, MASS., May 28, 1905.

[We call Dr. von Mach's attention, *exempli gratia*, to the upper part of page 64 and the notes at the foot of the same page. If these remarks were not intended as "reflections," we beg Dr. von Mach's pardon for misunderstanding him.—ED. NATION.]

TROLLOPE AND THE OSLER TREATMENT.

TO THE EDITOR OF THE NATION:

SIR: In the general discussion of Dr. Osler's humorous suggestion for the better treatment of sexagenarians, frequent reference has been made to Trollope's novel, 'The Fixed Period.' It is, perhaps, not without interest to note that the subject was treated many years before Trollope, in a play called "The Old Law," by Massinger, Middleton, and Rowley. Charles Lamb, with his usual sweet exaggeration, says: "There is an exquisiteness of moral sensibility, making one to gush out tears of delight, and a poetical strangeness in all the improbable circumstances of this wild play." Leaving the curious to find out for themselves how far Lamb's enthusiasm is justified, I may simply mention that the old law, on which the play is supposed to be founded, reads as follows: "That all men living in our dominions of Epire, in their decayed nature, to the age of fourscore, or women to the age of threescore, . . . shall on the same day be instantly put to death."

Near the close of Trollope's 'Autobiography' we read:

"Of late years, putting aside the Latin classics, I have found my greatest pleasure in our old English dramatists—not from any excessive love of their work, which often irritates me by its want of truth to nature, even while it shames me by its language—but from curiosity in searching their plots and examining their characters. If I live a few years longer, I shall, I think, leave, in my copies of these dramatists, down to the close of James I., written criticisms on every play."

As 'The Fixed Period' was written some time after the 'Autobiography,' this passage gives strong grounds for supposing that Trollope wrote his novel with "The Old Law" in mind.

GAMALIEL BRADFORD, JR.

WELLESLEY HILLS, MASS., May 31, 1905.

Notes.

'The Journey of Alvarez Nuñez Cabeza de Vaca, from Florida to the Pacific, 1528-36,' translated by Mrs. Fanny Bandelier after careful collation of the earliest original Spanish editions, and edited with an introduction by Ad. F. Bandelier, will shortly appear in the "Trail-Makers Library" published by A. S. Barnes & Co. There will be added the report of Father Macos of Nizza, the first explorer of New Mexico in a journey coming between Cabeza de Vaca's and Coronado's. A map will show the probable route of both explorers.

Houghton, Mifflin & Co. will publish in the autumn 'The Chief Poets of America,' in entire specimens, compiled by Curtis Hidden Page for use in the secondary and higher education.

Thomas Whittaker will shortly issue 'The Life, Work, and Letters of the Rev. Dr. Alfred Momerie,' edited by his wife.

Macmillan Company have nearly ready 'G. F. Watts: Reminiscences,' by Mrs. Russell Barrington.

'Routledge's Miniature French-English Dictionary' (New York: Dutton) is for the most part a handy one-line vocabulary, concluding with the usual lists of towns and countries and of irregular verbs. Its conversational use is emphasized by its admission of slang (indicated by quotation-marks). A few abbreviations are entered—N. S. J.-C., s. g. d. g. The date of compilation is not mentioned, but appears to be negatively fixed by the omission of *automobile*, and by the definitions of *chauffeur* and *garage*, in which the new machine is not hinted at.

From the same source emanate slightly larger yet still pocket-size volumes, Anson's 'Who Wrote That?' and Lapham's 'Who Said That?' The former is a tiny dictionary of familiar quotations, chiefly in verse, with index; and "aims at including all the quotations in common use which owe their origin to literary sources." In this it is more successful than might be supposed; but Mr. Anson's complacency in the novelty of his *index verborum* is amusing. As in other respects, Mr. Bartlett has been before him. The arrangement is strictly alphabetical, presupposing recollection of the initial word, even a particle. The compiler of the prose 'Who Said That?' sometimes introduces the original lingo of foreign quotations, as well as the translation, sometimes the translation alone. His cross-references are thus numerous, and he, too, has an index.

Mr. Frank Preston Stearns's 'Cambridge Sketches' (Lippincott) intimates in the preface sufficient immediate acquaintance with the subject described to warrant the book-making. Often, however, as in the case of Lowell, the personal contribution is of the meagrest; nor is there any graphic portraiture between these covers. There is far more attempt to criticise talent and works, and here one enjoys to the full Mr. Stearns's fondness for general and sweeping statements. Thus (apropos of Dr. Holmes), "Nature commonly sets her own stamp on the face of a humorist. The long pointed nose of Cervantes is indicative of immeasurable fun" (p. 152); and (p. 366): "[Crawford was] not only the best of American sculptors, but perhaps the greatest sculptor of the nineteenth century." Mr. Stearns's overpraise of C. P. Cranch's poetry exemplifies his slight qualification for the critical office. His anecdotes and, indeed, all his statements—so loose is his memory or his learning—must be severely scrutinized before being accepted. He says, on page 157, that "in 1867 Dr. Holmes published a volume of poetry which was generally well received, but was criticised by the *Nation* with needless and unmerciful severity." But Dr. Holmes published no volume of poetry from 1861 to 1875. It was his novel, 'The Guardian Angel,' which we criticised—and it has fallen into oblivion. We have sought in vain to discover the name of the writer of the review, but if Mr. Stearns will give it to us, we will tell him whether it was the "Harvard professor who owned a large interest in the *Nation*," and is mentioned with a slurring insinuation by Mr. Stearns. The book is not without interest, but it is decidedly untrustworthy. The proofreader gives us "low-studied" room on page 142; "Palma Vecio" on page 137; "un gran' disgrazie" on page 99.

The dedication exercises, a year ago, in connection with the installation of the John Carter Brown Library in its new building on the grounds of Brown University, have been printed in a dignified form at the Merrymount Press, Boston. The contents consist of the provisions of the will of the late John Nicholas Brown which made the foundation, and of the addresses of Dr. William Vail Kellen and Dr. Frederick Jackson Turner. From these together one obtains a summary history of the origin and nature of this great library of Americana and of the family which got it together, with personal anecdotes of John Carter Brown and of the auction-room. It was Dr. Turner's task to lay stress on the importance of the collection to students. His most significant remark was that "it is a striking criticism upon the American universities that the greatest historical work [in this country]

has been done by men outside of their walls, who either had independent fortunes or found support in some public appointment."

Why a globe-trotter—Sir Frederick Treves, Bart., K.C.V.O., C.B., LL.D., Sergeant-Surgeon to H. M. the King, etc.—should call his journal 'The Other Side of the Lantern' (Cassell & Co.) is difficult to discover till the reader, having finished the book, which does not take long, turns to the preface and learns that the children in a Japanese village are walking around a lantern to see what is on the other side, and that "a like curiosity has led to the writing of this trivial book." The connection is not apparent. It is excusable to see the other side of the lantern, but inexcusable to write such an account of it as is given in this description of a "commonplace tour round the world." The book is both trivial and ordinary, pictures and all, and so badly put together that the reader is danced from Tokyo to Washington and back again with no reason except that "there is little in common between" the two. Sir Frederick was "electrified" by Mr. Roosevelt, who "burst into the room" to see him. The traveller says here, with as much originality as he displays anywhere, that "when Mr. Roosevelt smiles, there can remain no doubt in the mind of any one that he is smiling." The book is, of course, inaccurate—Jeypore (save the mark) is described as "dustless"! But what is to be expected of a guide-book and diary in mixed doses? However, there is no great sin in writing such stuff, and those who like the commonplace may enjoy this book.

General Abbot's 'Problems of the Panama Canal' (The Macmillan Co.) contains more exhaustive discussions of the climatology of the Isthmus and the flow of the Chagres River than have heretofore appeared in the English language, these being largely obtained from the records of the French Commission. It is greatly to be regretted that the valuable data collected by our recent Isthmian Canal Commission, and submitted to Congress as appendices to its report, have never been published. This matter will, of course, be available for the use of the Board of Consulting Engineers which is to be formed to assist the present Canal Commission in its scientific work. During the past week Gen. Abbot has been appointed one of the members of this Board.

The Second Part of M. A. Foucher's 'Études sur l'Iconographie Bouddhique de l'Inde' (Paris: Ernest Leroux) complements the *première étude* (already noticed by us among the books of 1900 on India) by giving the rules for iconographic expression according to the Sādhanas, on which a good deal of work has been done lately by Grünwedel, Thomas, and S. Oldenbourg. The author finds that the Tantric divinities (devils) came to expression in figurines only after the Buddhas and Bodhissattvas had had their day. Yet it would be inexact to affirm that for this reason the Tantric divinities did not exist long before art represented them. All we can say is, that they were feared and honored even before Buddha's own age; but they did not play a prominent rôle in Buddhism. We must, then, give up the *commode théorie du Bouddhisme en trois périodes*, etc.; all of which goes to show that the more carefully we read history, the more clearly we perceive that men have not changed much in three thousand years. Beneath the upper intellectual crust there were always those who worshipped by choice at the shrine of a handy devil rather than in the church of a remote divinity, less likely to respond to human passions.

The same general editor publishes this year in the "Annales du Musée Guimet" the first volume of a monograph by Sylvain Lévi, entitled "Le Népal; Étude historique d'un royaume hindou.' The author makes a slight error at the beginning of his work in saying that only three countries about (not within) India have preserved the memory of their past in historical documents, Ceylon, Kashmere, and Nepal. Assam should have been added, more especially as there is a curious philological connection between Kashmere and Assam. The latter has records going back to the age of Bhagadatta. The present volume contains, besides a general introduction and maps, a geographical description of the country; a discussion of the documents (European, Chinese, Tibetan, and Nepalese); the modern organization, as contrasted with the ancient organization, of the State (political, religious, economic); and a special chapter on the divinities, imported and local. In giving Khasas as the Hindu designation of the tribes to the north, the author might have added the important fact that both Jain tradition and the Hindu epic recognize the modern name of the country, Nepala. Generally speaking, Khasas are our modern Gurkhas, and their history forms one of the most interesting parts of this valuable work, the second volume of which will be looked for with eagerness, despite the fact that the author has not stated what it is to contain.

Bulletin No. 9 of the Copyright Office at Washington is a sort of mirror of our national lagging in doing justice to intellectual producers. It consists of "The Provisions of the United States Copyright Laws, with a summary of some parallel provisions of the copyright laws of Foreign Countries"—enough to show wherein our statutes are defective and call for improvement. The arrangement is in parallel columns. The topics are: Who may obtain copyright; Subject-matter thereof; Duration, or term of protection; Nature and extent; Statutory formalities; Office of registration; Protection of copyright; International relations. Mr. Solberg has not omitted an index.

Some innovations arrest attention in the 34th annual report of the Public Library of Grand Rapids, Mich. Cards on any subject are furnished at a cent apiece (plus postage by mail), "to enable a business or professional man to have a card catalogue in his office or his home on the subjects in which he is most interested," keeping abreast of new publications and in turn revealing its deficiencies to the Library. This privilege is open to any one wherever resident. The Library also indexes its cardholders by street and house-number, thus securing an intellectual chart of the city, and, in conjunction with the Board of Health, enabling itself to withhold its circulation from infected quarters. Finally, it has induced the street-railway company to carry its name on their cars.

Sir Frank Younghusband's story of the Tibet Mission, told in the *Geographical Journal* for May, is most interesting, both for its subject and the numerous personal touches which enliven it. The beauty and fertility of the country traversed, when the mountains were crossed, impressed and surprised him, as he had thought it barren and uncultivated, and not, as it proved to be, a land whose many valleys were dotted all over with flourishing hamlets and groves of poplar, walnut, and even peach and apricot trees. Of the mental calibre of the leading lamas he formed a low estimate; the Regent, who held the chair of divinity in the Gaden monastery, being distinctly inferior in intellectual power and spirituality to the ordinary Indian Brahmin. During the stay in Lhasa, arrangements were made for an expedition to trace the course of the Tsangpo, the great river of Tibet, through the Himalayas, among the most interesting enterprises left to be accomplished on the face of the globe. The consent of the lamas was given, and the party was formed, to be met by another body of explorers from the outlet in Assam, but at the last moment orders came from Simla to abandon the undertaking. In the discussion over the address, Sir Henry Howorth dwelt upon the strange influence of Buddhism on those extraordinary nomads, the Mongols, who a few centuries ago overwhelmed the civilization of all but Western Europe, but now are apparently the most helpless people on earth. At this moment two-thirds of the race live in monasteries. Among the other contents are accounts of an exploration in Bolivia, and a missionary trip in North China, in the course of which a city, Pa-ko, was visited which had a single business street, lined with shops and full of traffic, seven English miles long.

Petermann's Mitteilungen, number three, opens with a description of the volcanoes of Iceland, by Prof. Th. Thoroddsen. His purpose is to show the close relations which they all, both great and small, bear to the fisures in the earth's surface, for these are here more clearly manifested than in any other region in the world. Arno Senfft, an official in the Caroline Islands, contributes an interesting account of the natives on two of the group, dwelling particularly on their racial characteristics and industries. Other articles are a sketch of the cartography of Norway, with a descriptive list of the most important maps and charts, and some facts about the "traffic-belt" of Berlin and Vienna. The difference in the facilities of intercourse with the surrounding country between the two capitals is very marked. In Berlin a strip 75 miles wide can be reached in two hours and less, in Vienna only 62 miles. The two to five-hour limit is 181 miles to 125, and the five to ten-hour limit is 312 and 250 miles respectively. The accompanying maps show that the rapid-transit area of Berlin is almost wholly to the west and south of the city, and that of Vienna to the east and north.

Mr. Raymond Weeks, author of a series of articles, not yet completed, on the newly discovered unique manuscript of the 'Chançun de Willame,' in the quarterly *Modern Philology*, presents a shorter account of it in the April number of the *Library*. This old *chanson de geste* has not been entirely unknown, the latter part of it forming the "Aliscans"; but the new discovery is of great importance as being a much older version, representing the poem as it was sung about the time of the Norman conquest of England, since when the manuscript has seemingly remained buried in various English libraries. It was sold in

May, 1901, with the library of the late Sir Hope Edwardes, but its previous history is as yet unknown. Its present owner, who chooses to remain anonymous, has issued a beautifully printed edition from the Chiswick Press, mainly for presentation; a few copies, however, were placed for sale with J. & J. Leighton. "When the text of the 'Willame' has received the sure and safe corrections which modern philology allows, it will remain for posterity the most primitive, the most human, and the most beautiful of the many *chansons de geste* of ancient France."

The Journal (*Meddelanden*) of the General Association of Swedish Printers, begun as a medium of communication between the members, has more and more taken on the character of a journal of the book-arts. The first two monthly numbers of the present (tenth) volume contain several articles of interest to librarians and bibliographers, as well as to printers, *e. g.*, a couple of papers on ex-libris, by Dr. R. Geete and Dr. I. Collijn, the latter accompanied by finely reproduced facsimiles; and a short article on Shaksperean quartos and folios, apropos of the 1594 edition of "Titus Andronicus," by Evald Ljunggren. The January number contains a proposal, from Mr. C. F. Bernström, for the establishment of an historical collection of Swedish printing, as a department of the Book Industry Museum which the Association maintains. The proposal was accompanied by a gift of 54 works printed between the years 1615 and 1853, 30 of which are productions of Stockholm presses, and 11 of provincial presses in Sweden proper, while 13 are from six Swedish presses in Åbo in Finland.

—The June *Century* is so largely occupied with civil-war topics as to recall its great war era of twenty years ago. Most amusing, if not most valuable, is a reminiscent paper on Jubal Early, by some unnamed soldier of his command. "Old Jube" was a queer fish, with a bewhiskered face suggestive of a very hairy and very malignant spider, his over-long legs and over-short stirrups bringing his nose and his knees into close proximity, the stars of his shabby uniform too tarnished to be clearly distinguished, his knees and elbows flapping as he bobbed up and down past the lines on a nag thoroughly in harmony with his own makeup; in general effect "more like an animated scarecrow than the commanding-general of an army." Thomas M. Semmes contributes his recollections of "Stonewall" Jackson as a teacher in the Virginia Military Institute. A paper on "Boys in the Union Army" gives incidentally a list of nearly one hundred names of officers contributing to the *Century* war papers of 1884-1888 who have died during the years intervening. From other statistics furnished in the same paper one learns that the survivors of the civil war came out of the conflict with their expectation of life increased, on the whole, rather than diminished. The official death records of the Grand Army for twenty years past show a death-rate under the normal, Indeed, among the pensioners exclusively, the death-rate has been but slightly above the normal average. Gilbert H. Grosvenor gives a description of the various activities of the Weather Bureau, incidentally defending our much-dreaded cold waves as a prime cause of the keen, alert mind, the incessant energy, of our American race.

—In *Harper's*, President Hadley offers a new suggestion on the problem of the elective system. Taking it as practically indisputable that the present method cannot secure the best results, except for a very small proportion of the student body, he suggests that the way out lies in the recognition of a few fundamental differences in types of mind with which the college has to deal. One boy is interested chiefly in facts, another in ideas, and a third in affairs, giving us respectively the scientific, the literary, and the administrative types of mind. Under one of these three headings, he thinks, almost every normal student can be ranged. It does not follow, however, that the college should group its studies accordingly and assign each student to his apparently appropriate group. It is not a question of different subjects, but of different ways of getting at a subject. One boy gets at his studies from the standpoint of the scientific investigator, a second from that of the literary expositor, and a third from that of the practical administrator. The teacher, then, should extend and differentiate his teaching to meet the needs of all three types, a task which Dr. Hadley does not regard as seriously difficult in most branches of study, and which, if successfully performed, must result in a very desirable broadening of outlook for both teacher and student. Professor Lounsbury writes on the Standard of Usage, defining the well-known dictum of Horace more narrowly by the *consensus eruditorum* of Quintilian, and repudiating the charge that those who reject the authority of the text-books and dictionaries thereby set up "the man in the street" as the proper standard. The Easy Chair takes its turn at Dr. Osler, a subject apparently as contagious among the more mature portion of the race as the measles among those of tenderer years. To the data already accumulated, we may add Quintilian's opinion that the oratory of Cicero, who died at sixty-three, might have been even better than it was if only he had lived longer.

—In a series of selections from the letters and diaries of the daughters of Edward Everett, during his occupancy of the English mission, *Scribner's* offers an enjoyable picture of English court society from the delightfully irresponsible point of view of a girl in her teens, as the elder daughter was obliged to leave London on account of ill-health and the extracts are mostly from the pen of her younger sister. If Miss Charlotte took any interest in the political problems of her father's mission, she at least did not obtrude it upon her relatives or confide it to her diary. The gayeties of the social whirl, with the intellectual pleasures of converse with such men as Macaulay, Rogers, and Sydney Smith (to the time of his death), are the chief matters of record. Minister Everett's dress for the Queen's ball is elaborately described in a letter to her grandfather, with the accompanying comment, "You may guess the cost of all this finery. Mamma says this little chit of a Queen will be the ruin of us." After Polk's election had resulted in Mr. Everett's recall, we get the following comment from the diary, written apparently after the vessel had started on the homeward voyage: "I cannot express how unhappy I felt at leaving dear England. I am not going home; I am quitting it forever, I fear." We get another phase of England, and a very attractive one, of course, in "A Day among the Quantock Hills," from the pen of Henry van Dyke. In the "Field of Art," Will H. Low comments very favorably on the exhibit of American artists at the St. Louis Exposition. From the Paris Exhibition of 1878, he thinks, "there has been evidence of steady and satisfactory progress, culminating at the Louisiana Purchase Exposition in a definite expressional achievement second to the exhibit of no other nation."

—The fame which Florence Nightingale enjoys is double. Popularly, she is Longfellow's Lady with the Lamp, a tender nurse by night as well as day, whose passing shadow the suffering soldier kissed as it fell upon his pillow. To the student she stands a pioneer administratrix of a very high type. From causes not necessary to discuss here, the hospitals subsidiary to the Crimean army of 1854 were in a most deplorable state. When the British War Office realized that, the secretary invited Miss Nightingale to organize and lead to Scutari the first detachment of female nurses, a service she promptly accepted. She was not previously in public life, but it was Mr. Herbert's good fortune to know her character and qualifications. This happy assignment, accepted through patriotism and discharged with self-sacrifice, enabled her genius for organization to develop for her country's good. The dual control, between medical and line officers, of the British military hospitals (which still persists, to their apparent disadvantage) was doubtless responsible for some of the distress; the difficulty of adapting to the needs of a multitude rules designed for the management of a few caused more; but, above all, the absolute lack of official supplies, whose regulation allowance at best was meagre, resulted in a state of absolute and unnecessary misery. Arriving on the heels of Inkerman, with "every inch of room" in the hospitals, whose capacity was rated at thousands, filled with sufferers, and many men resting "on the muddy ground outside," she at once began the methodical distribution of stores, infused the courage of common sense in subordinates who had been trammelled by the letter of the law, and detailed her working staff, all too few for such a multitude, to the relief of immediate suffering. There must have been some friction, but there is no sign of it in the 'Life' by Miss Sarah A. Tooley (Macmillan), which is the occasion of this note, and presently the judgment of all concerned saw in Miss Nightingale more than a mere Lady Bountiful—a real genius, whose earlier training bore ample fruit, and whose character guaranteed that the lavish supplies poured into her hands would be judiciously expended. That she was of gentle birth and independent means doubtless made the way much easier, for with none are such aids as persuasive as with the English, while the charms of personal beauty and discretion tell for their possessors all the world over. Her great work was at Scutari, where it would be most effective; but she visited the lines before Sebastopol toward and after the close of the siege. Her subsequent career, while less conspicuous, has been useful and influential in the highest degree, and in her

eighty-fifth year, long indeed an invalid, she survives—to every one who loves his fellow-man, a saint, none the less actual for being still uncanonized.

—Professor Santayana of Harvard puts forth the first two little volumes of five to be entitled "The Life of Reason, or the Phases of Human Progress" (Charles Scribner's Sons). The first volume is entitled 'Introduction, and Reason in Common Sense,' the second 'Reason in Society.' Reason in Religion, Art, and Science respectively are promised. The publishers' advertisement called the philosophy pragmatistic, and it is true that the first part of the first chapter and some other passages have that aroma; but the author more accurately describes himself when he says that "almost every school can furnish something useful." It is, in fact, an eclectic philosophy, and, like other works of that sort, is likely to have more literary than scientific value. Book A of Aristotle's Metaphysics (the theistic book) has had more influence upon this mosaic of opinions than any other one work. Professor Santayana's style is highly polished, in parts too much so; so that we are bewildered and fatigued by a shimmer of rapidly passing thoughts that are hard to make out through a medium more glittering than lucid. He is so extravagant an admirer of Greek reasonableness that we have sometimes asked ourselves whether he hadn't a deep design of producing in his writing a general effect of Greek; although nobody can be more perfectly aware than Professor Santayana that on a closer inspection every feature of his style is at the very antipodes of Greece—as far from it as one could possibly get. Professor Santayana's volumes are anything but commonplace. They are all that Boston has of most *précieux*. They are also extremely handy and agreeable to the eyes.

—In 'The Chronicles of an Old Campaigner' (Dutton) Col. Walter C. Horsley has translated a volume of memoirs which, after enjoying considerable repute in the eighteenth century, has been suffered of late to disappear from view. The author, M. de la Colonie, was a dragoon officer in the service of the Elector of Bavaria during the years when the court of Munich was deriving its political inspiration from Versailles. His reminiscences are almost wholly devoted to the wars of the period, and reflect the state of feeling which prevailed in South Germany when Marlborough and Prince Eugene made their famous march to the banks of the Danube. M. de la Colonie was not actually present at the battle of Blenheim, but he served during that campaign, besides being present at Ramillies and Malplaquet. He also took an active part in the Turkish war of 1717, when Prince Eugene foiled the last attempt of the Ottoman to reach Vienna. It was in the operations around Belgrade that M. de la Colonie gained his chief distinction, but the most interesting part of his story relates to the Blenheim campaign. His chief characteristic as a critic is moderation of tone and sympathy with the unfortunate, but he cannot understand why Tallard, when he had decided to leave his entrenchments, did not use the 15,000 Bavarian troops that were at his disposal. Eloquent testimony is given to the quickness of Marlborough's movements by the effect they had on the enemy. So completely did he take Tallard by surprise that, when he began his attack on the French position, a considerable part of the French army was dispersed in the form of foraging parties. What pleased the English and Imperialists most was that they should have captured twenty-seven battalions and twelve squadrons simply by hemming them in; nor can there be any doubt regarding the failure of the French to make the best of a bad business. This book contains little information regarding politics or society, but certainly deserves to be known by all who care to study warfare as an art.

ART ESSAYS BY KENYON COX.

Old Masters and New. By Kenyon Cox. Fox, Duffield & Co. 1905.

Visitors to Europe who care for the art either of yesterday or of three hundred years ago, would do well to put into their trunks, or, better, their handbags, Mr. Kenyon Cox's collection of essays and reviews with the above title. Readers of the *Nation* will find some of them familiar but none the less re-readable. Much that he says, if (as he himself notes) not always particularly new, is vital, and is stated clearly, tersely, often incisively, and with the authority of a practising artist. It is perhaps this *authority* which is peculiarly valuable to his reader, backed as it is by a fearlessness that does not for a moment hesitate to call a spade a spade, even if, in the hands of a Titian or a Tintoretto, it may appear to the half-initiated an enchanter's wand. The great artist really does bear a magic staff, and its waving clothes all that his name stands for with a glamour so effective that, within its influence, his devotee sometimes mistakes bad for good, and lumps failure with achievement. To the layman such a state of mind is probably healthier than a too critical one, for, if he be not somewhat dazzled by the splendor of a great master, he has not wholly enjoyed him. Nevertheless, when the tourist says of a canvas, *quia* a Titian, "What splendidly glowing color!" (we quote textually an instance known to us), it is well sometimes to have an artist at elbow to say, "Instead of proceeding by acquired momentum, wait a bit and look at the canvas; these colors are cold and inharmonious, the result of overpainting done long after Titian was dead." Mr. Cox is this artist at one's elbow; and if he thus corrects our hasty mistakes, he also combats, now and again, a deliberately acquired opinion, fortifying his own by a trained and often peculiarly keen observation, and never forgetting that if documentary testimony is sometimes invaluable and study of an artist's environment is nearly as important, consideration of the work in hand—looking at the canvas or fresco—is worth all the rest.

Our author's space is relatively limited, and as historian he summarizes, giving nearly all his time to criticism, as the reader would wish to have him. Critically, too, he summarizes the qualities of the painter studied, ordering his exposition carefully, and covering the different sides of his subject's artistic expression with gratifying comprehensiveness. He does not, however, permit this regularity of plan to hinder emphasis of the salient; when he assumes his personal point of view, it is without hesitation. Thus, he sees in Rubens, for example, a classic rather than a romantic painter; and when he agrees with the opinions of others he just as unhesitatingly reaffirms them—as of Michel, for instance, regarding the same painter's method and ponderation, which, superficially considered, seem so converse to his apparent *entrainement* and real *fougue*. Mr. Cox notes the great Fleming's faults and virtues as not Flemish, but European and *seicento*, and finds cleverly qualifying epithets, such as the "flourishing and writing-masterly style" of Rubens's drawings, and pays deserved tribute to this pioneer of landscape painting.

In the Frans Hals article Mr. Cox corrects the loose-thinking admiration of loose handling, and shows that it is not looseness, which is easy, but right placing and shaping of the loose stroke, which deserves such admiration; and he prophesies the eventual discovery of canvases which shall show the steps that led Hals to his unerring brushwork. He frankly disavows the presence of beauty in some of Rembrandt's most famous figures, yet emphasizes their adornment of a beautiful result; he condenses Fromentin's estimate as "the truest word of criticism" uttered, and, on his own account, puts tersely and excellently the reasons for Rembrandt's sharing in his old age the lot of the prophet in his own country. In sum, he qualifies wisely, yet sees in the work of the wonderful Dutchman the expression of "one of the greatest and most profoundly original minds in the world's history."

When he approaches the modern artists, Mr. Cox enters a less-trodden field, but treads it as firmly. He puts Meissonier's minuteness of detail in the background (or at least the middle ground) rather than the foreground of his achievement, thus again usefully stimulating the thought of the average observer, and gives a well-stated explanation of why the "1807," full as it is of Meissonier's best qualities, is a failure. He praises his masters with discrimination, but Baudry he *loves* among moderns, as Veronese among the men of the Renaissance; perhaps he overpraises a little Baudry's earlier works, yet the article is a timely tribute to the great and not sufficiently known Frenchman. The lover of Baudry is heartily appreciative of the genius of Puvis, and in the successive articles upon these two painters he impartially follows the gamut of decorative painting in the nineteenth century's latter half. Perhaps the best article in the book is that on Whistler. In this admirable essay the exposition of a man's technique and technical development is the most direct and sustained which we remember since Fromentin wrote his 'Maitres d'autrefois,' and is all the more illuminating in that Mr. Cox shows that it is hardly a technique at all, in the generally accepted sense, but rather the development of a state of mind regardless of whatever else might be; the development of a sort of caress which smoothed out of nature everything that did not minister to Whistler's inclination; the development almost of a *mood*. The reader may be commended to the juxtaposition of Whistler, Sargent, and Velasquez upon page 244, and, above all, the paragraph on page 245, beginning "How far the absence" and ending with "He lacks the first essential ability, the ability to desire." These are golden words; and Mr. Cox gives us such

exposition as we hope for when a practising artist writes, and which is peculiarly valuable since it is the result of peculiar competence. The essays upon Veronese, who, we repeat, is *persona gratissima* to the author, and Sargent may be ranked with the Whistler article for their exposition of draughtsmanship in the American and composition in the Italian painter.

Assuredly Mr. Cox throughout his book occupies the position of one who, while holding the pen, does not lay down the palette; and for this we distinctly thank him. Perhaps such close following of a man's methods may be too technical for the lay reader; it may not hold his attention but it ought to hold it; and if he will confront his memories of the text with the canvas or panel, he will find that his admiration and doubts have been in some measure explained, and his capacity for intelligent appreciation increased. In sum, where Mr. Cox speaks as an artist (and he nearly always does), it is not easy to take issue with him, for he knows remarkably well what he is talking about. Now and then one may disagree with him about other matters—for instance Perugino's irreligion is not finally settled for us by Vasari's dictum, though of his commerciality there is no doubt. Again, though every word which Mr. Cox says against Tintoretto's canvases in the School of San Rocco is true, we believe that, despite their faults, a much better case may be made out for them than the author admits. Nor, again, has he accounted satisfactorily, to us at least, for the wonderful charm of Albert Dürer's work, especially his engraved work; but then neither has Thausing or Ephrussi or anybody else, and perhaps Mr. Cox has summed up the impression of Dürer as well as any one has in the last sentence of his article. We should like to have him write another and longer book with a little more background to his admirable foreground; meantime, let us once again bid those who enjoy the art of yesterday and to-day read 'Old Masters and New.'

A SYMPOSIUM ON RUSSIA.

The Case of Russia: A Composite View. By Alfred Rambaud, Vladimir G. Simkovitch, J. Novicow, Peter Roberts, and Isaac A. Hourwich. Fox, Duffield & Co. 1905.

As a general rule, "timely" books are not very safe risks. If they are just a little overripe, they are apt to prove untimely by the date of publication. In the present case each of the component articles was originally intended to cover a subject in a definitive manner, with no thought that it would be pressed into service a second time, in company with matter which repeats or contradicts it in a tone of equal authority, and at a date when rapid changes have, in great measure, altered many important features prominently dwelt upon. M. Rambaud's contribution, which fills nearly half the book, and is called "The Expansion of Russia," is by far the most interesting and valuable of the lot. Beginning with the sentence: "We fail to discover, however far back we go towards the beginnings of the Russian State, any indication that this was ever destined to become a maritime power," and ending with: "She [Russia] is about to inaugurate a new era in her history; the oceanic, the world-wide era, is merely beginning for the Slav," he sets forth clearly, succinctly, temperately, and, in the main, with perfect justice, the vital facts in Russia's history. The portion which deals with the early and more complicated history is more dry and difficult of assimilation (because of the necessary brevity) than the corresponding portion of his well-known 'History'; but he keeps well in view his guiding thought, and from time to time calls attention to it, as he passes the different epochs, by such paragraphs as the following (which refers to the end of the sixteenth century):

"Now the European neighbors of Russia were beginning to fear this great barbarian empire. They were convinced that it would become truly a terror to them on the day which [*sic*], by obtaining regular communication with the West, it could thereby learn something of their civilization, their industries, and, above all, their military art. They understood that the backward condition of its civilization was the only safeguard against its ambitions. . . . Thus is was not merely unpropitious nature that kept Russia in a condition of blockade; but the jealousy of her neighbors mounted a most rigorous guard around these 'barbarians' of the north."

M. Rambaud also shows that the securing of new territory has concerned Russia much less than has the securing of access to the open, ice-free sea. Nevertheless, he devotes one chapter to "The Expansion of Russia in Europe," author to "The Southward Expansion of Russia in Asia" (in which he admits that Russians understand things Asiatic far better than either the French or Anglo-Saxons, and "have every possible right to supplant those colonies of the Germanic and the Latin races that are taking unwilling Asia under their tutelage"), besides others on "Further Conquests," "The Expansion of Russia in the Far East," "Corea," "China," and "The Means and Methods of Russian Expansion." A good deal of what is said in the last-named chapter as to Russia might, with equal justness and a mere change of names, be applied to England or any other of the colonizing nations of the earth. There is no definite statement as to the date when M. Rambaud wrote these pages; but it was evidently three or four years ago, before the mutterings of the present storm in the Far East began to be noticed, and matters more recent than those of 1898-1900 at latest are not considered. Here, as throughout the book, the proof-reading is inadequate, and the translation is not always quite what it should be, as one of the quotations above given shows.

Nearly one-quarter of the volume is devoted to "The Russian People: A Psychological Study," written in 1901, by Mr. J. Novicow of Odessa. He is often more severe on his fellow-countrymen than they quite deserve; but he is always absorbingly interesting, even when the greatest allowance must be made, by those who know the other side, for his extreme individualist—almost revolutionary—opinions. Under "Race and Temperament" he draws a comparison between the colonizing movements in Russia and America. "This movement is still going on," he says. "The American 'Far West' has a counterpart in the 'Far East' of Siberia. But while the Aryans of America have almost exterminated the autochthonous population of the Redskins, the Russian emigrants have commingled with the ancient autochthonous populations of eastern Russia." From the mixed race thus produced (as well as by previous interminglings he has described), he draws the personal opinion (statistics being lacking) that the lymphatic temperament prevails, though the choleric and bilious and every imaginable type are to be encountered in the empire. Inequality of effort is one of the most prominent characteristics in the general Russian psychology, he says, and is the result of historical circumstances. When these circumstances are modified, it will disappear. Under changed conditions, he thinks it probable that Russians will develop as much persistency of effort as Anglo-Saxons, and declares that there are now extant individual proofs that inequality of effort is very far from being a universal fact among cultivated Russians. When it comes to a question of calm, tenacious energy, which overcomes all obstacles, Russian women are much more remarkable, he says, than Russian men; and he thinks that the intellectual emancipation of Russian women is in advance of that of their sex everywhere, except in America, whose women alone will bear comparison with his own countrywomen. On the score of "Sentiment," he asserts that the Russians are among the least cruel peoples of Europe; instancing in proof that no popular sports of a brutal character, such as cockfights, bullfights, even boxing or pugilism, are ever observed among them—much less is lynch law to be met with. As another proof of gentleness of nature he says: "Within the memory of man, there has not been a region of Great Russia which has been permanently infested with brigands. Night and day one may traverse the most lonely road with a sense of perfect security. Crimes are occasionally perpetrated, but only in sporadic and individual cases." And he calls attention to the fact that Russia was first to suppress the death penalty for offences against the common law. A more curious result of the national good nature is that the administration is rather badly run because the chiefs cannot make up their minds to dismiss their subordinates, or even to censure them, in many cases.

The reputation of Russians for cruelty is explained, first, by the fact that, in point of sentiment, as of mental activity, they are very unequal, and, under certain circumstances, entirely lose control of themselves; secondly, on the ground that when it is a question of reasons of state, pity seems to vanish; and, thirdly, by reason of harsh penal legislation having prevailed there longer than in the West. Personally, Mr. Novicow says, he is convinced that not more than three or four thousand persons were sent to Siberia for political crimes during the whole of the nineteenth century, though the figures current in Western belief are infinitely larger. Moreover, generally speaking, he believes that political prisoners experience no worse treatment in Russia than in other countries. Most instructive is the comparison which the author draws between the severity of punishment dealt out to political offenders in Russia and other countries in special cases which can properly be placed in parallel. For instance, when the whole army revolted, on the accession of Nicholas I., in 1825 (chiefly owing to a misunderstanding), in all, five officers only were condemned to death and executed. In

France, in 1824, four sergeants were executed because they were members of a secret society; while in Spain, in the same year, seven Freemasons were executed simply for having held a meeting; and in 1848 the Austrians executed large numbers of malcontents. Towards the Orthodox Church Mr. Novicow is not very friendly, and many of his statements might be disputed. The chapters on "Politics" and "Present State" are frank and liberal in tendency, but should be read entire. One warning the reader requires about "Politics," namely, the author's (or is it the translator's?) "Panslavism," "Panslavic" stand for what is universally known as Slavophilism. The impression thus conveyed is erroneous and confusing to the last degree.

Mr. V. G. Simkovitch's contribution, "Russian Autocracy: An Interpretation," consists chiefly of citations from a book by the last of the Slavophilists, N. K. Leontyeff, whose opinions are of value mainly as illustrating the extremes indulged in by a few persons of a past generation. Mr. Simkovitch interprets them as the guiding "system" of the present reign (chiefly because Mr. Pobyedonostzeff is procurator of the Holy Synod), and the fundamental causes of the occupation of Mantchuria and of the war in the Far East. His views are pessimistic, presenting a striking contrast to the article on "The Slavs," by the Rev. Peter Roberts of Yale, which follows it. Mr. Roberts seems to be well acquainted with the Slavs in the Pennsylvania mining districts (of whom a majority are not Russians), and, while admitting their defects, he is, on the whole, enthusiastic as to their good qualities and their natural possibilities. His subject, naturally, involves the repetition of many historical and economical statements already considerad by the writers who precede him. In spite of a certain tautological effect, there is a distinct profit to the reader in having the facts thus illuminated from the point of view of several able observers, reinforced by quotations from the Russian authorities who appeal to their several judgments. Indeed, this is one of the greatest merits of the volume. "Religious Sects in Russia," by Mr. Isaac A. Hourwich, fitly closes the collection. It is, practically, written exclusively from the Jewish standpoint, affording a clear presentation of the Russian Hebrew in the very recent past. As the Czar's recent ukase on religious liberty, and the still more recent plans for removing, practically, all restrictions from the Hebrews, have, happily, relegated this statement to an honorable niche in the archives of semi-ancient history, it is not necessary for us to consider it at length.

MORE BOOKS FOR MUSIC LOVERS.

The Oxford History of Music. Vol. V. The Viennese Period. By W. H. Hadow. Clarendon Press; New York: H. Frowde.

The Music of the Masters: Wagner, by Ernest Newman; Tchaikovski, by E. Markham Lee; Beethoven, by Ernest Walker. Brentano's.

The Story of the Violin. By Paul Stoeving. Scribners.

Text-Book of Simple and Double Counterpoint. By Dr. Hugo Riemann. Leipzig: Breitkopf & Härtel.

Tonal Counterpoint. By Walter R. Spalding. Arthur P. Schmidt.

The Musician's Library: Modern French Songs, edited by Philip Hale; Songs by Thirty Americans, edited by Rupert Hughes; Twenty-four Negro Songs, transcribed by Coleridge-Taylor. Oliver Ditson Co.

The author of the fifth volume of the 'Oxford History of Music,' Mr. W. H. Hadow, is one of the best informed of English writers on musical topics. His two volumes of 'Studies in Modern Music' have passed through several editions, and this latest production of his will increase his fame as one who habitually masters his subject so thoroughly that he can write about it fluently and entertainingly. The period allotted to him is the Viennese; he traces the development of the musical forms separately, and discourses at considerable length on the influence of C. P. E. Bach upon Haydn, the place of folk-song in classical composition, the part played by Gluck in the history of opera, the gradual divergence of symphony, sonata, and quartet, the interrelation of Haydn and Mozart, the character of Beethoven's third period, the debt owed by German song to the national movement in German poetry.

Mr. Hadow draws a vivid picture of the subordinate position held by music before the nineteenth century, when musical compositions were so short-lived that it seemed hardly worth while to print them; when wind instruments and organs were habitually out of tune; when so eminent a violinist as Viotti, summoned to play before Marie Antoinette, after three vain attempts to break the conversation, put up his violin and walked out of the hall; when men like Haydn and Mozart were treated like menials. It was when Mozart, in a white heat of anger at the indignities heaped on him by the Salzburg Archbishop, proffered his resignation that "the *ancien régime* of music signed its death-warrant." Yet even Beethoven was forced to "accept the charity of private subscription" for his important works. It must not be forgotten, however, that Haydn's many years of service in the Esterhazy household bore most valuable fruit because of his isolation from the musical world, and the opportunity he had of hearing the folk-songs with which he saturated his music, thus infusing it with a new strength and vitality:

"Eisenstadt lay near his home, the whole countryside was full of the folk-songs which he had loved from childhood—songs of the ploughman and the reaper, of rustic courtship and village merrymaking. Half unconsciously he began to weave them into the texture of his composition; borrowing here a phrase, there a strain, there an entire melody, and gradually fashioning his own tunes on these models; . . . they find their way into everything—quartets, concertos, divertimenti, even hymns and masses; they renew with fresh and vigorous life an art that appeared to be growing old before its time. . . . And the Austrian Hymn is simple a Croatian ballad which has been ennobled and dignified by the hand of a master."

Gluck belongs to the Viennese period, although the Viennese had no use for him and allowed him to become a Parisian. His failure in London, before he became a reformer in Paris, was modestly interpreted by him afterwards as proof of the superiority of English taste, but Mr. Hadow thinks otherwise: "The English taste of the time was little short of deplorable. Handel told Gluck that he had taken too much trouble, and in this cynical avowal we may perhaps be nearer the truth." Regarding Mozart's operas, Mr. Hadow expresses the opinion that it is a mere historical accident that three of the great ones were set to Italian words, and that the quality of the music would not have been sensibly affected if they had been written to German texts. This is probably true. He might have added an interesting paragraph discussing the strange fact that Mozart's operas, which are commonly classed as Italian, have never interested the Italians as the absolutely un-Italian operas of Wagner have done.

The vast field of oratorio and church music is discussed in a long chapter, which takes the reader also to England, France and Spain, and in the final chapters we return to Vienna in the period of its greatest glory—the period of Beethoven and Schubert. Mr. Hadow compares Beethoven's third period to the second part of Goethe's "Faust," and he declares that the whole scheme of formal structure has passed into a new stage of organic evolution, as different from that of the "Pastoral" or the "Waldstein" as they are different from the earliest quartets and symphonies of Haydn. He recognizes the historical importance of the tiny pieces which Schubert collected under the title of "Moments Musical," as the first pieces in which the direct influence of the sonata is not paramount, and he also casually refers to the fact that "the harmony of Schubert is more varied than that of Beethoven," but does not by any means dwell sufficiently on this very important point, or hint at the extraordinary influence which Schubert's modulatory innovations had on nineteenth-century music.

One of Wagner's German biographers has remarked that "the prayer at the beginning of the fifth act of 'Rienzi' tells us more about the great man than ten volumes of documentary research." Mr. Ernest Newman is not partial to this kind of idolatrous enthusiasm. In his little book on Wagner in Brentano's "Music of the Masters" series, he frankly warns the reader at the outset that he need not expect of him undiscriminating adulation: "Wagner the sociologist, Wagner the historian, Wagner the economist, Wagner the philosopher, almost all might be swept away without the world losing very much. . . . Wagner as a thinker, in short, is receding more and more from the public eye, while for Wagner the musician our admiration is probably greater than ever." In his 'Study of Wagner,' Mr. Newman considered him from every point of view; in these 208 pages he treats of him exclusively as a musician and a dramatist, and does it with a refreshing independence of judgment, and in a manner which shows that even now it is not too late to say something new and interesting about the Bayreuth composer. His life is not told here, but his works are taken up in chronological order, the stories of the operas are briefly outlined, and the poems and music commented on, lucidly and in a spirit indicated by the remarks that "to criticise Wagner is not necessarily to disparage him." In the bibliography to which the last chapter is devoted, Mr. Newman pokes fun at the extraordinary Mr. Ashton Ellis, the English translator of

Wagner's prose works. "Some one," he says, "might now do the student a real service by translating Mr. Ellis into English."

Mr. Lee's 'Tchaikovski,' like Mr. Newman's book, begins with a convenient chronological table. He gives, on the whole, a somewhat dry analysis of Tchaikovsky's works, useful as a bird's-eye view, but not as valuable as it might have been had use been made of the two fascinating volumes of biography by the composer's brother Modest. It is absurd for Mr. Lee to say that we have been overdosed with the "Pathétique Symphony." He refers to London, where that work is given perhaps half a dozen times a year. Sixty annual performances of such a sublime work would not be half enough in a city of that size. One feels little confidence in a commentator who refers to the heartrending anguish and sublime melancholy of this work as "unhealthy and morbid pessimism," and to the exquisite "Nutcracker" suite as "clever but superficial."

Ernest Walker's 'Beethoven' adds another to the list of books on that master with which, for no obvious reason, the market has lately been flooded after a long drought. It is a good and useful little volume, which discusses the master's different classes of works in separate chapters. The author has the courage to say that "it is comparatively rarely that we meet in Beethoven's songs music that would be worth troubling about were it not for the magic of his name"; and he expresses other opinions which indicate he is a believer in Mr. Newman's maxim that to criticise a composer is not to disparage him. One may take issue with some of his statements, such as that "the ordinary purely diatonic framework gives a depth that chromatic restlessness, however poignant, can never secure"; but on the whole one must admit him to be a sane and safe guide and suggestive withal.

The name of Paul Stoeving and his title as professor of the violin at the Guildhall School of Music inspire one with confidence in his book on that instrument, a confidence fully justified by its contents. He has condensed in its 324 pages a vast amount of information on the origin of the violin, its early forms and varieties, its famous makers in Italy and elsewhere, the "secret" of its varnish, the principal players of both sexes, and the works written for it. Concerning the lady violinist, the author remarks that

> "only with the two sisters Teresa and Maria Milanollo, in the forties of the last century, the charm and poetry of violin-playing woman seems to have fully dawned on the world at large. Since then the increase in amateur and professional violinists has been phenomenal. Madame Norman Neruda (Lady Hallé) set the ball rolling in England, Camilla Urso in America; and around these two stars cluster today a very large wreath of fair executants of all nationalities."

Dr. Riemann defines counterpoint as "the theory of the free invention of melody," and he holds that harmonic figuration, as now taught, is an independent course, coming between harmony and counterpoint. It is from this point of view that he has written his valuable text-book on counterpoint, of which Mr. S. Harrison Lovewell has made a clear translation into English.

The other treatise on counterpoint on our list, by the assistant professor of music at Harvard, is also an admirable text-book from every point of view. It is more practical than the German's, and throws more sidelights on the art of composing. It is very much up-to-date, as the citations from Wagner, Tchaikovsky, Franck, and even Elgar, show. Professor Spalding rightly holds that there should be less difference than there usually is between the counterpoint in books and that in Mozart, Beethoven, or Franz: "There must of necessity be some difference; one is an exercise for the young student, the other the work of mature genius. Nevertheless the difference should be one rather of *degree* than actually of *kind*." It is in this closer approximation to the works of genius that the chief value of Professor Spalding's book lies. The chapter on free writing for pianoforte is particularly good. It explains, among other things, why the old masters must not always be followed in chord-writing, because what was all right on their instruments sounds thick or muddy on our modern grands.

Mr. Philip Hale is a great admirer of French music, including French songs; no other musician in this country is so well informed as he on this topic, or can write of it so eloquently; hence, one can procure his selection of French songs with full confidence. When he declares that Fauré and Debussy have now no rivals as song-writers in any land, he seems to the reviewer as far from the truth as the sun is from the earth; but this assertion is the only flaw in the excellent introduction he has written as a preface to these two volumes of French songs, an essay of lasting value. Mr. Rupert Hughes had a less easy task in making a selection of American songs, because in this field copyright difficulties impede free choice. He has, however, been able to produce a fairly representative list, which includes the names of Paine, De Koven, Fisher, Huss, Nevin, Baltzell, Loomis, Hadley, and twenty-two others. Partly American also are the Negro Melodies transcribed by Mr. Coleridge-Taylor. Half-African himself, he naturally felt in sympathy with the black songs. Four of his selections are from Southeast Africa, two from South Africa, one from West Africa, one from the West Indies, while sixteen are marked as the property of American negroes. In each case the tune is first given in all its bald simplicity, and then elaborated into a pianoforte piece on the plan of *tema con variazioni*. The transcriber declares that he has attempted to do for the negro melodies what "Brahms has done for Hungarian folk music, Dvorák for the Bohemian, and Grieg for the Norwegian." The mention of Brahms in this sentence in place of Liszt is an amusing specimen of English provincialism. It can hardly be said that Mr. Coleridge-Taylor has equalled any of his models, even Brahms; his music is not sufficently barbarous, and it utterly lacks inspiration. The volume is prefaced by an interesting biographic sketch and essay on negro music by Booker Washington. When he says that, "apart from the music of the redmen, the negro folk-song is the only distinctively American music," he repeats a current misconception which is equally amusing and amazing. For the seventy millions or so of us who are not Indians or negroes, there is vastly more that is American and prophetic of the future of American music in the works of MacDowell, Loomis, Huss, and others, than in all the Indian and negro tunes.

By the Ionian Sea: Notes of a Ramble in Southern Italy. By George Gissing. Charles Scribner's Sons. 1905.

The late George Gissing tells of his journey through Magna Græcia to the sites and remains of the ancient cities of Tarentum, Sybaris, Croton and Locri in a very vivid manner. He gives an excellent idea of the actual condition of the country and its people. Those who are prepared to visit this unfrequented region of Italy will find the book most useful, for the published guides to remote places are rarely up to date. Delightful reading awaits those who have not the opportunity to travel.

This was Gissing's last journey south. Italy and Greece had from early youth been his land of romance, opened to him by early training in Greek and Latin authors. His intellectual desire was to escape life as he knew it, and to call back the imaginary world which those studies had evolved for his boyhood; and his capacity for doing this was truly remarkable. No hardships or discomfort damped his enthusiasm, destroyed his great sympathy with the people he met on the way, however irritating and dull they seemed to be. Even in sickness and suffering, as at Croton, where he was detained sometime by lung trouble, his observations on the people around him are full of knowledge of character and the desire to understand the point of view of others. And yet, there is no gushing admiration for Italian ways in this volume; Gissing's love of antiquity did not in any way dim his perceptions as to the present state of the country.

"In all the south of Italy," he says, "money is the one subject of men's thoughts; intellectual life does not exist; there is little even of what we should call common education. Those who have wealth cling to it fiercely; the majority have neither time nor inclination to occupy themselves with anything but the earning of a livelihood, which for multitudes signifies the bare appeasing of hunger." Further on he writes, despondently: "It is a country wearied and regretful, looking ever back to the things of old, trivial in its latter life, and unable to hope sincerely for the future."

Mr. Gissing seems to have been deeply impressed by the poverty and squalor prevailing in Calabria. The peasants, notwithstanding this, he found remarkably honest and self-respecting. They appear simple and dignified, without that begging for alms which modern travel seems to generate everywhere. Only once do we hear of a case of extortionate charge by an innkeeper at Squillace (the Scylaceum of Cassiodorus). Notwithstanding the monotonous life of the people in the small towns, Gissing was greatly struck by the higher tone and wider interests of middle-class people in the cafés of those little towns, compared to that of folk of the same standing in a county barroom in England, where jocoseness is allied to drink. With great justness he says: "Those people have an innate respect for things of the mind which is wholly lacking to a typical Englishman."

Gissing's itinerary of travel was suggested by François Lenormant's 'La Grande Grèce.' At Naples he was warned of the dangers that would beset his path; it was late in the autumn, and snow might be expected to fall in the mountainous districts; malarial fever also was common, while the bad accommodation and the probable scarcity of food made it difficult for Neapolitans to understand that the love of antiquity could alone be sufficient reason for so perilous an expedition. Nothing daunted, he took the steamer for Paola, and, by the same road which Hannibal had followed in his retreat from Italy, Gissing drove to Cosenza, meditating on Alaric, who, six hundred years after Hannibal, came the same way, bearing the spoils of Rome which were to enrich his tomb; the labors of the captive multitude turning aside the course of the Busento River so that its flood should hide for all time the conqueror's resting-place. The train then carried him to Sybaris, now merely a railway station; the original city is supposed to lie intact under fifteen feet of alluvial mud, in which the people of Croton buried the city's ruins five hundred years before Christ by altering the course of the Crathis—a fine field for future excavation. From Sybaris he proceeded, again by train, to Taranto, where the new arsenal, the pride of that city, had been built over Fontanella, by the shore of the Mare Piccolo. The ancient heaps of murex shells described by Lenormant (the purple of Tarentum was second in value only to that of Tyre) had forever disappeared.

Besides the innovations of modern requirements, the course of time alone brings changes in the aspect of nature. For instance, of the Galæsus, near Tarentum, the river beloved by Horace, and beside which Virgil is supposed to have written his Eclogues, Gissing writes:

"It is barely half a mile long; it rises amid a bed of great reeds, which quite conceal the water, and flows with an average breadth of some ten feet down to the sea-shore; on either side of it, bare dusty fields, and a few hoary olives."

"Certain it is that all the waters of Magna Græcia have much diminished since classic times, but (unless there have been great local changes due, for example, to an earthquake) this brook had always the same length, and it is hard to think of the Galæsus as so insignificant."

Metapontum, where the ruin of an old temple, called (from a memory of the Saracen war) "Tavola de' Paladini," the Table of the Paladins, was our traveller's next halt, and thence he went to Croton, whose walls, after the fall of Sybaris, encircled twelve miles. There "Pythagoras enjoyed his moment's triumph, ruling men to their own behoof." A school of medicine, the pride of Magna Græcia, flourished here, and the saying, "Healthier than Croton," testifies to the salubrity of the spot. Now, a squalid town, where most of the inhabitants suffer from malarial fever, and which has no vestige of antiquity, exists on part of its site, while the Æsarus, which used to flow through the heart of the city, is all but a stagnant and pestilential stream. Along the banks, at its mouth, grow wide orchards of orange trees, pomegranates, and tamarisks, with here and there magnificent stone-pines, and even a palm tree; but here, too, the traveller unaccustomed to Southern methods of agriculture finds disappointment, for, instead of soft turf, the ground is bare and lumpy, like a ploughed field, so that under the trees there is no place for rest.

To recruit from severe illness endured at Croton under most trying hardships, Gissing went by diligence to Catanzavo on the heights, and describes that place as one of the healthiest spots in Southern Italy, where the children are well fed and are robust and happy, and where the silk industry flourishes and affords prosperity to the inhabitants. Although the rough and unfinished appearance of its houses and public buildings suggested the frequency of earthquakes, Catanzavo is able to boast of a pharmacy quite unique among modern shops, with woodwork copied from the best examples of Italian carving, and a sign ("Mostra") hanging over the entrance —of a griffin—in fine ironwork from an old masterpiece. This pharmacy, kept by two brothers, is almost like an art museum. Here, too, a rare experience in dealing with shops occurred to Gissing. The hospitality and kindliness of the people of Catanzavo seem to be quite a tradition. He tells of being taken round by the English vice-consul, Signor Pasquale Cricelli, and says:

"We entered a shop which he thought might interest me; the salesman during our talk unobtrusively made up a little parcel of goods and asked, at length, whether I would take this with me or have it sent to the hotel. That point I easily decided, but by no persistence could I succeed in paying for the things. Smiling behind his counter, the shopkeeper declined to name a price; Don Pasquale declared that payment under such circumstances was a thing unknown in Catanzavo, and I saw that to say anything more would be to run the risk of offending him."

We have no space to follow our authors to Squillace (Virgil's "shipwrecking Squilacium"), the native place and last retreat of Cassiodorus. Suffice it to say that the book is worth reading from beginning to end, and might serve the advocates of Greek and Latin for *all* as a precious illustration of the uses of ancient literature in imparting true perceptions of beauty which serve as a never-failing refreshment from the eventualities of life. In almost every place visited, Gissing found traces, in the language and traditions, of Greeks, and several groups of peasants from neighboring villages were specially called "Greci."

Fetichism in West Africa. Forty Years' Observation of Native Customs and Superstitions. By the Rev. Robert Hamill Nassau, M.D., S.T.D., for forty years a missionary in the Gabun District of Kongo-Française, etc. With twelve illustrations. Charles Scribner's Sons, 1904. Pp. xxii, 389.

Much of the missionary literature of to-day is characterized by a knowledge of ethnic facts and a sympathy with the religious and social expressions of the primitive mind impossible at an earlier epoch. We have had the trader, the Government official, and the missionary *vom Fach* give their ideas as to the "folly" and "superstition" known as fetishism, and there were few of them who, with the author, "did not think it reasonable to dismiss curtly as absurd the cherished sentiments of so large a portion of the human race," or could, for thirty years, in a search for the philosophy of these beliefs and the sentiments underlying them, "always lead the conversation, in hut or camp, back to a study of the native thought." As Mr. Nassau remarks (p. 85), "such faith is magnificent, though it be folly," and in it there is not a little that is even admirable. One soon discovers that these Africans are men as we are men, and do much of their thinking in common with us. Innumerable acts and practices of Christians in civilized lands to-day, customs of Christmas and Eastertide, use of amulets and charms, superstitions about ornaments, numbers, recurring days and seasons, devices of language, art, etc., idiosyncrasies of dress, action and the like, surviving in more or less nocuous desuetude, go back to heathen antecedents once as fully believed in, and as faithfully employed, as are their African congeners of the present time. This fetish element in modern white culture has not been unnoticed by the native African:

"You white people don't know anything about black man's 'fashions.' You say you trust God for everything, but in your own country you put up an iron rod over your houses to protect yourselves from death by lightning; and you trust in it, the while that you still believe in God; and you call it 'electricity' and civilization. And you say it's all right. I call this thing of mine, this charm, 'medicine'; and I hung it over my wife's bed to keep away death by the arts of those who hate her; and I trust in it while still believing in God. And you think me a heathen!"

Thus said, in substance, a partly educated Sierra Leone negro, whose wife, a well-educated Mpongwe, was rebuked by the Church authorities for permitting her husband to suspend a fetish in her room. The comment of the missionary, "I trusted to the lightning-rod under God, while he trusted to his fetish outside of God," is hardly satisfactory. The difficulties of heathen Christian argumentation are further revealed by the discussion (pages 131-132) as to the justice of putting a woman to death for "killing" by witchcraft. Elsewhere in the book are many instances of the clash of white and negro ideas on matters of all kinds, which the long and intimate experience of the author has enabled him to record.

While, as a gatherer of facts, Dr. Nassau has somewhat the true scientific instinct, his position in regard to the evolution of religion is of the old orthodox, conservative sort, and his treatment of the idea of God among the African natives is prejudiced by his opinion that "knowledge of God was thus an original, donated, component part of us. It grew under revelations made during the angelic communications before the Fall." Nevertheless, his book contains a large amount of interesting and valuable data, the result of his personal observations, and experiences. Besides an introductory discussion of the constitution of native African society (the family, named from its physical origin, is the unit), chapters on the idea of God, polytheism and idolatry, and the nature, classes and functions of spiritual beings, and two closing chapters on tales of fetish, based on fact, and fetish in folk-lore, the volume under review contains a detailed treatment of fetishism under the following heads: The philosophy of fetishism (a physical salvation; charms and amulets), fetishism as a worship (sacrifice, prayer, etc.), fetishism as witchcraft (white art, sorcery; black art, demonology), fetishism as a system of gov-

ernment (based on fear), fetishism in relation to the family, to daily work and occupations and to the needs of life, fetishism and superstitious customs, fetishism in relation to the future life, practical effects of fetishism. Among these last Mr. Nassau enumerates: Depopulation (owing largely to the human sacrifice involved, the death-rate much exceeds the birth-rate); cannibalism, which originally had a sacrificial element; abundance of secret societies (male and female), whose possibilities for good are quite overbalanced by their actualities for evil; poisoning for revenge, and so-called "judicial executions" (really murders in many cases); development of utter lack of confidence between man and man, and consequent perversion of the natural affections; voodooism. Transplanted to American soil, African fetishism flourishes as "Vudu or Odoism," as the author styles it, with its extension among the ignorant white masses as "Hoodoo." Another survival of African life in America Mr. Nassau finds in the "Br'er Rabbit" tales of "Uncle Remus," but this is still doubtful, for the negroes borrowed much from the Indians on the Southern plantations. The debt of the Bantu peoples to the ancient Egyptians (p. 332) is probably exaggerated; also the significance of the Caucasoid features said to occur sometimes among them.

One may say of this book that the writer's facts are better than his theories; and the broader position he appears to be often almost ready to take a better index of his personality than the one his narrower theology forces him to assume. There are fetishes and fetishes.

Dutch Pottery and Porcelain. By W. Pitcairn Knowles. London: George Newnes; New York: Charles Scribner's Sons. Pp. xv., 122.

Not long ago we noticed the first volume of the Newnes' Library of the Applied Arts, and we have now to record the appearance of the second volume. This set of inexpensive hand-books will prove very valuable, and will invite the notice of every student, if the volumes to come are as much needed as are the two we have received. Dutch pottery has been more freely discussed in English books than has French faïence, which last, indeed, seems to be practically unknown to English students, while the simpler Dutch wares, at least, were well known in England before the nineteenth century. But still a good and handy volume devoted to "Delft" in all its forms was lacking until the appearance of the one before us.

Our author explains in the preface his position as a collector and student: he acknowledges his indebtedness to the important work of Henri Havard, and tells how his own occupation of collecting ceramic wares of all sorts of Netherlandish make took him a little beyond Mr. Havard's scope. His own collection is scattered now, and he has had to lean upon his authorities more or less, and to draw his illustrations largely from the national museums of Great Britain.

Here is a case where inexpensive color-printing is more likely to be useful than in most departments of art study, and accordingly there is a three-tone plate of a tall covered jar painted in polychrome; another plate dealing with two pieces closely imitating Japanese painted porcelain; and many prints in blue that give a very fair notion of the plaques and vases in which full blue color is used for a pattern on a bluish-white ground. What is most interesting in the text, because the most unexpected, is the description of very elaborately painted tiles which the author does not try to date—tiles probably of the seventeenth century, and containing a wonderful deal of the spirit which we find in the Dutch landscape painting of that time. The author speaks of "the increase of the size of the tile to a large panel, sometimes exceeding a yard in length and breadth." This is a very unusual dimension, but all collections contain decorative plaques painted with landscapes and figure subjects, and ranging in length from fourteen to twenty inches. Two or three are given here in the blue prints. There is one with a view of Brussels and a winding road leading to the town, along which are passing a coach-and-four "of the period" and a party of huntsmen, while the gallows of the town, with corpses hanging from it, and several minor gibbets are grouped on a hillock around which the road turns. Another one shows *zee-visch marckt en vleeschal,* and the author thinks that the locality is Delft itself. Of a later period, 1768, as dated, is an elaborate figure painting, "Christ before Caiaphas," only eleven inches high, but containing eleven figures in the foreground group and others in the distance, together with an architectural interior, all of the same size as a kindred piece representing "The Flagellation."

Probably the most important chapter in the book is that devoted to the porcelain-making of The Hague, Arnheim, and Amsterdam. There is very little known of Dutch porcelain, and our author says plainly that what there was came of private enterprise alone, "without royal encouragement," though what there was of royalty in the Netherlands in the seventeenth century remains unexplained. The chapter, indeed, does not open the door very wide to explorers, for few are the pieces which have been identified as of real hard porcelain made in the Netherlands before 1800 A. D. These are in the South Kensington Museum, so far as known to the author, and no one of them is reproduced in his plates. Still, every pointer that may lead the student to a further knowledge of what European porcelain has existed in the past is to be welcomed.

The appendix contains a long series of names of potters and their dates, with facsimiles of the marks upon their ware, and the volume ends with an index occupying ten pages.

The National Administration of the United States of America. By John A. Fairlie. The Macmillan Co. 1905.

The lack of a work dealing systematically with national administration in the United States has long been deplored, and toward the present volume, therefore, a critic is inclined to be well disposed—or as nearly so as is possible for one of his tribe. His verdict must be that Mr. Fairlie has grappled successfully with a large subject, and produced a treatise which will be of real service to the student of American politics. That the book has certain minor defects of design and execution is nothing more than should have been expected in a work that may be described legitimately as *bahnbrechend.*

Mr. Fairlie begins, naturally enough, with the powers of the President, the administrative sun around which, shining with their own or reflected light, revolve a multitude of greater or lesser luminaries whose orbits it is desired to compute. He traces very well the enormous growth of "the scope and value of the administrative powers of the President" since the establishment of the present Government under the Constitution. This has come about, as the author explains, largely through the exercise of the power of removing subordinates and through the promulgation of ordinances, or executive orders, governing administrative details which, of necessity, are left to the President and his subordinates. It would have been well if Mr. Fairlie had called attention to the enormous increase in the range of interests entrusted to Presidential edict since the adoption of a colonial policy, and had examined in the pure white light of the science of politics the remarkable pension order which attracted so much attention less than a year ago. One could wish, also, that the relation of administrative centralization to efficiency in the performance of public business could have received more than the mere remark that the power of removal was "advocated as a necessary means to enable the President efficiently to discharge his duty." In this, and in a number of other matters, our author would have profited greatly if he had in this chapter drawn more deeply upon the unfortunate experience of our country with divided executive authority in the days of the old Confederation.

Control of administrative affairs by Congress, and, in particular, by the Senate, is the next topic which receives attention. The important part which the Senate plays in foreign affairs and in dictating nominations to executive positions, Congressional control of the finances, and Congressional supervision or investigation of all branches of public business, receive due consideration, each in its proper place. But these subjects are treated in the barest outline, and many a chance is lost to illustrate or even to develop the argument by referring to recent events which would be fresh in the minds of readers.

Two excellent chapters follow, devoted to the Cabinet and to general features of our national administrative organization. The author then proceeds to consider in detail the structure and duties of each of the executive departments. Here he is obliged to deal with a mass of facts, many of them uninteresting to the average student, which both reader and reviewer are tempted frequently to skip. As the groundwork for a general treatise, Mr. Fairlie's chapters are probably adequate, and in the present state of the literature upon such subjects will be found highly useful to many seekers after particular bits of information. Here, too, something more is done to bring out the connection between centralization of executive authority and administrative efficiency. It should be said, also, that sins both of omission and commission are not more numerous than they are bound to be in a first venture of this kind. The author has done his work carefully, and his book may be accepted as a generally trustworthy guide.

Less by way of criticism of Mr. Fairlie than as a suggestion for subsequent investigators, it may be said that the thing lacking in the present treatise, and to be supplied by future studies, is a careful examination of the way in which, within the framework prescribed by statute or executive ordinance, the actual work of our Government is carried on. Mr. Fairlie, for instance, has given us a better account than we have had so far of the organization of the Treasury Department; we now need more information as to the way in which this elaborate machinery actually works. Thus, he describes the present system of auditing accounts, and says that it "constitutes an effective administrative control over the disbursing officers of all the other departments." This may be true; but the operations have never been examined by a scientific observer, and recent scandals in one or more of the executive departments suggest that the system is not yet perfect. Upon this and many other topics we may the more reasonably expect light from other investigators now that Mr. Fairlie has charted the entire field and reminded us that, after all, we have a national administrative system even though the average citizen does not often come into direct contact with its agencies.

Hale's DRAMATISTS OF TO-DAY

ROSTAND, SUDERMANN, HAUPTMANN, PHILLIPS, PINERO, SHAW, MAETERLINCK. An informal discussion of their significant work by EDWARD EVERETT HALE, JR. Gilt top, 12mo, $1.50 net—by mail, $1.60.

Evening Post—"It is not often nowadays that a theatrical book can be met with so free from gush and mere eulogy, or so weighted by common sense . . . an excellent chronological appendix and full index . . . uncommonly useful for reference."

Dial—"Noteworthy examples of literary criticism in one of the most interesting of literary fields . . . provide a menu of the most interesting character. . . . Has a *naivete* of style that is engaging, and he establishes confidential relations with the reader from the start. . . . Very definite opinions, clearly reasoned and amply fortified by example. . . . Well worth reading a second time."

Outlook—"Always suggestive, in the last degree informal . . . modest in style and also in spirit, fresh and entertaining."

Brooklyn Eagle—"A dramatic critic who is not just 'busting' himself with Titanic intellectualities, but who is a readable dramatic critic. . . . Modest and sensible, as well as acute and sound. . . . Most people will be surprised and delighted with Mr. Hale's simplicity, perspicuity and ingenuousness."

Sinclair's DIVINE FIRE

The Boston Transcript says: "It is rare, indeed, to come across a novel in which there is so much genuine greatness." 6th printing, $1.50.

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps.

$5.00 *net.* Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

Lasell has ideas and methods concerning the training of girls that make it an extraordinary school.
The hands and the body are trained with the mind. Courses in Domestic Economy and Applied Housekeeping, Lessons in Sewing, Cooking, Dress Cutting, Millinery, Home Sanitation, Conversation and Walking—all without extra cost. Special advantages in Music and Art, 10 miles from Boston. Write for catalogue.
C. C. BRAGDON, Principal.

THE BERKELEY STREET SCHOOL
(FORMERLY MISS INGOLS'S)
CAMBRIDGE, MASSACHUSETTS
Will re-open Thursday, September 28, 1905, under the direction of Miss LILLIAN M. MUNGER and Miss CONSTANCE B. WILLISTON.

ROCK RIDGE SCHOOL
For Boys. Location high and dry. Laboratories. Shop for Mechanic Arts, *Strong teachers. Earnest boys.* A new gymnasium with swimming pool. Fits for College, Scientific School and business. Illustrated pamphlet sent free. Please address
Dr. G. R. WHITE, Principal, Wellesley Hills, Mass.

The HIGHLAND MILITARY ACADEMY,
Worcester, Mass. 50th year. The Rt. Rev. Alex. H. Vinton, D.D., LL.D., Springfield, **Visitor.** Says a present patron: "The best investment I have ever made was the placing of my sons in your school." Address:
JOSEPH ALDEN SHAW, A.M., Head Master

Mrs. L. Chapman and Miss Jones,
Successors to Mrs. Comegys and Miss Bell,
Boarding and Day School for Girls.
For circulars address Miss C. S. JONES.
Chestnut Hill, Philadelphia.

Important Publication

FERRIS'S ELEMENTS OF DESCRIPTIVE GEOMETRY
$1.25

UNLIKE other books of its kind, this volume deals with all its problems in the third angle—a method generally considered to be the most logical and that most favored by engineers. The work forms an admirable presentation of the subject, treating of definitions and first principles; problems on the point, line, and plane; single curved surfaces; double curved surfaces; intersection of single and double curved surfaces by planes and the development of surfaces; intersection of solids; warped surfaces; shades and shadows; and perspective. The author presents for each problem a typical problem with its typical solution, and then gives numerous examples, both to show variations in the data and to secure adaptability in the student. Another advantage is the use of the v and h exponents or subscripts to indicate the projections or the two planes instead of a prime for one and nothing for the other. The book contains 113 figures.

AMERICAN BOOK COMPANY
New York **Cincinnati** **Chicago**

BOOKS OF TIMELY INTEREST

Ripley's Trusts, Pools, and Corporations
A collection of important contributions by economic and legal specialists.

President Roosevelt's Railroad Policy
Addresses by Charles A. Prouty, David Willcox, Peter S. Grosscup, and Frank Parsons.

Davidson's Education of the Wage-Earners
A contribution toward the solution of the educational problem of democracy.

GINN & COMPANY, Boston

Science and A Future Life
By Prof. JAMES H. HYSLOP, Ph.D., LL.D.
$1.50 net. 12c. postage extra.
Based on Scientific Investigation of Psychic Phenomena.
HERBERT B. TURNER & CO., Boston

Financial.

Investments.

We offer a selected list of **HIGH GRADE BONDS** and guaranteed **STOCKS** paying from 3½ to 5%. The securities are on hand for immediate delivery.

A STUDY OF INFLUENTIAL AGENCIES IN CHINA

T. R. Jernigan's China in Law and Commerce

In China law is founded on custom: of customs there are as many as provinces in the Empire; therefore a work which indicates with substantial accuracy the influential agencies governing legal and commercial relations is of great value.
Cloth, 12mo, $2.00 net (postage 13c.)

A VERY IMPORTANT, TIMELY LAW-BOOK

Mr. Arthur K. Kuhn's *translation of* Professor Meili's International Civil and Commercial Law

By F. MEILI, Professor of International Private Law in the University of Zurich, Delegate of Switzerland to the Hague International Conferences. Translated and Supplemented with additions of American and English Law, by ARTHUR K. KUHN, Member of the New York Bar. *Cloth, 8vo, $3.00 net (postage 18c.)*

AN AUTHORIZED TRANSLATION OF

E. Levasseur's Elements of Political Economy

By THEODORE MARBURG, M.A. Portions of the treatise were rewritten by the author for this translation; other additions and changes made by the translator himself were approved by the author. *Cloth, cr. 8vo, $1.75 (postage 13c.)*

AN AUTHORIZED TRANSLATION FROM THE SECOND GERMAN EDITION OF

Dr. Hermann Schultz's Outlines of Christian Apologetics

FOR USE IN LECTURES. Translated from the revised and enlarged, edition 1902, by ALFRED BULL NICHOLS, Professor of German in Simmons College. *Cloth, 328 pp., 8vo, gilt top. $1.75 net, (postage 12c.)*

A NEW VOLUME IN THE ENGLISH MEN OF LETTERS SERIES

Edward Fitzgerald By Mr. Arthur Christopher Benson

Mr. Benson's "Rossetti," in the same series, issued last year, won especial favor for its sympathy and clearheaded view.
Cloth, 12mo, gilt top, 75 cents net (postage 8c.)

FOUR LECTURES BY PROFESSOR L. H. BAILEY

The Outlook to Nature

Delivered in Boston last January, on "The Realm of the Commonplace," "Country and City," "The School of the Future," "Evolution: The Quest of Truth." *Ready this week. Cloth, 12mo, $1.25 net (postage 11c.)*

INORGANIC CHEMISTRY **Outlines of Inorganic Chemistry**

By FRANK AUSTIN GOOCH, Professor in Chemistry in Yale University, and CLAUDE FREDERICK WALKER, Teacher of Chemistry in the High School of Commerce, New York City. *Cloth, 513 pp., $1.75 net (postage 18c.)*

New Novels Just Ready

BY THE AUTHOR OF "THE CALL OF THE WILD," ETC.

Jack London's The Game *Cloth, $1.50*

This is a crisp, direct story full of that characteristic appeal to the primitive passions which marks "The Call of the Wild," "The Sea-Wolf," "Children of the Frost," etc.

A NOVEL OF WASHINGTON SOCIAL LIFE

Foxcroft Davis's Mrs. Darrell *SECOND EDITION. Cloth, $1.50*

"It seems to me to be a man's knowledge and experience and a man's method of narration, but it is a woman's love story," writes one reader of the book to its publishers.

A NOVEL OF SOCIAL LIFE IN LONDON

Miss Robins's A Dark Lantern

By the author of "The Open Question," "The Magnetic North," etc. *Cloth, $1.50*

"One of those rare stories every page of which makes a strong appeal to the reader's interest. . . . It is one of the most living stories of the new century."—*Courier-Journal.*

A SIGNIFICANT NOVEL OF AMERICAN LIFE

John Heigh's The House of Cards

By a Sometime Major of U. S. V. *Cloth, $1.50*

"A study of the dominant man of to-day, of the interests which have absorbed him, of those which he has ignored, and of the results in both directions."

A RESTFUL NOVEL OF THE "OLDFIELD" TYPE

Mrs. Nancy Huston Banks's The Little Hills

A book whose pervading charm, suggestive of shady fragrant Kentucky roads, in no way weakens the forcefulness beneath it.
Ready next week. Cloth, $1.50

By THE AUTHOR OF "THE PROPHET OF THE GREAT SMOKY MOUNTAINS"

Charles Egbert Craddock's The Storm Centre

A sweet natural love story of the times when the strain of civil war was tightening around the Tennessee hills.
Ready next week. Cloth $1.50

THE MACMILLAN COMPANY, Publishers, 64-66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, JUNE 15, 1905.

The Week.

The President's identical note to Japan and Russia constitutes, we believe, a precedent without precedent. Technically a very guarded proffer of good offices, it actually was a plea that the belligerents resume direct negotiations. Such a request is unusual, and ordinarily would be deemed officious. Against any misapprehension of this overture, Mr. Roosevelt had taken precautions by securing approval of the substance of his note at Tokio and St. Petersburg. To dispatch once for all the comparatively minor matters of diplomatic form, it may be said that the innovation consists in accompanying a proffer of good offices with a concrete recommendation—to negotiate directly. Generally speaking, no such counsel is in order until the warring nations have given the neutral peacemaker some kind of mediatorial standing. It seems, however, to be a case in which the President's direct method injects into the formalities of diplomacy a refreshing element of common sense. Unquestionably, the counsel of direct negotiation expresses the judgment of civilization; and merely as an expression of the hope of the world, the President's plea is vastly creditable to its originator.

We are withholding relief to the Philippines in the form of an amended tariff; we are preparing next year to make them pay a higher price for the carrying of their hemp to our markets; but we *are* going to give them railroads. That is, we will let the Philippine Government guarantee 4 per cent. return for thirty years on 1,233 miles of railroad in the archipelago. Secretary Taft announced the plans and specifications on Sunday, and bids and proposals are to be received up to the first of November. We should have liked to see at least a preliminary effort made to secure bidders for the projected lines without the feature of a Government guarantee. It was stated on the floor of Congress that there was at least a chance of attracting capital on the simple merits of the business proposition. As finally passed, the Cooper bill had been vastly improved, careful safeguarding clauses being added, and the guaranteed return being reduced from 5 to 4 per cent. Granting the perfection of the measure in detail, however, we are simply taking a leaf from the books of countries which are developing colonies which they admittedly intend to hold permanently. The proper development of the islands under our care is a high purpose, but legislation of this kind must not be allowed to tie our hands against doing in time for the Filipinos what we have done for the Cubans.

If the advance in man's civilization is to be measured by his acquiring additional wants, the statistics of trade with the lesser of our "non-contiguous possessions" tell the story of an almost headlong advance from barbarism. A little pamphlet just issued by the Division of Foreign Markets in the Department of Agriculture shows that Guam and Tutuila received from us in the last year a somewhat astounding array of products which they had never had before. Guam in a year used 562 pounds of our butter, 180 of lard, 263 of bacon, 268 of ham, 100 pounds of raisins, 25 of prunes, and $20 worth of cocoa and chocolate. Not one of these was in the list of our exports at all for the preceding years. Tutuila has been just as prompt in taking up American products, though with decidedly different tastes. That fortunate island has bought eggs—240 dozen of them—$9 worth of feathers, $6 worth of honey, 6 gallons of syrup, 51 gallons of vinegar, 311 gallons of cider, and $3 worth of soap stock. Thus the staples in which we have formerly dealt with these possessions are now being supplemented by the odds and ends of the larder. Bret Harte, in one of his parodies, spoke of the Frenchman who, dropped in Senegambia, would in a week "give you an omelet served by the neatest of Senegambian *filles*, whom he will call 'Mademoiselle.'" It seems to have taken five years to get our prunes established in Guam and our soap stock in Tutuila, but the achievement is memorable, none the less, and obviously proves the wisdom of our entire expansion policy.

Minister Bowen's request to be allowed to return to Caracas and collect evidence against Assistant Secretary of State Loomis conveys a sense of regret for opportunities neglected. To live where accusations against Mr. Loomis could be gathered up by the bushel, and to come away with only a handful of the least damaging charges, bespeaks unfitness for the diplomatic career. But Bowen's slackness should not be accepted as Loomis's vindication. Improprieties already laid at his door make his continuance in office little short of scandalous, and there is more behind. That he should be conducting momentous international negotiations, even in a clerical capacity, is anomalous and most unfortunate.

The fight on the Maryland negro disfranchising amendment may be said to begin in earnest with Mr. Bonaparte's speech before the Republican State Committee on June 7. Senator Gorman is resolved to make this the one issue of the Democratic campaign this fall, and is really doing his best to bring about a division on the basis of color alone rather than party. As the negroes make up less than a fifth of the population of Maryland, according to the last census, anything like a union of the whites against them would, as a matter of course, put through the amendment, though this shows at the same time how utterly preposterous is the talk of any possible menace to white supremacy in the State. Of the particular form of the disfranchising amendment, it is enough to say at this time that it combines all the worst features which have been devised for any of the Southern constitutions. The Gulf States, by comparison, have liberal and enlightened suffrage provisions. Gov. Warfield, though a Democrat, opposes the amendment as drafted, and did not attend the recent meeting at which Gorman urged his policy before the members of the State Committee. There are undoubtedly many other Democrats who think with him. And, if the challenge to break party lines is accepted by the opponents as well as the advocates of negro disfranchisement, there is opportunity for a stinging rebuke to Gormanism.

The anti-Trust law recently enacted in Arkansas has been sustained by the Circuit Court of that State. In a unanimous opinion, it decided, a few days ago, that the Hartford Insurance Company was properly fined for one day's violation of the law forbidding such companies to do business in Arkansas if belonging to a pool or combination anywhere to fix rates. The order declaring that the company has forfeited its right to continue its business in the State, however, has been suspended pending the decision of the Supreme Court. In case the Circuit Court is sustained, the Hartford company may be penalized from $200 to $5,000 a day from the date the law went into effect. Another company, which decided to prepare a test case, has raised the point, in its defence, that legislation of this kind is an attempt to restrain interstate commerce, since it is not based on any claim that pooling agreements are made in Arkansas. Insurance companies and others of a similar character are watching the course of the litigation with interest. Their exclusion from Arkansas is not regarded as a vital blow, but it forecasts the sort of action that may be demanded in other States where the feeling against business combinations is growing distinctly hostile. One result the law, if

sustained, will be certain to achieve: it will drive all the old-line insurance companies to the familiar expedient of incorporating dummy companies on the spot. Evasion is the natural result of legislation of so drastic a sort.

Candor is usually an unappreciated virtue in politics, but Mayor Williams of Portland, Oregon, is basing his hopes for reëlection upon it. In meeting the charges that he was party to a scheme to "milk" the gambling fraternity of the city, after the fashion of the Maine authorities in dealing with liquor-law violations, the Mayor says with surprising frankness that he secured some very necessary municipal improvements, including repaired fire-engine houses, only by the periodical collection of fines from the law-breakers. His excuses are admirably framed to appeal to a "practical" Westerner. He was opposed to gambling, but the juries that were drawn to try those arrested almost invariably acquitted them. Then the City Council held a secret meeting and recommended a system of fines. The Mayor heard of the decision and objected, but the matter was presented to him in this light: We have no money in the city treasury, the Lewis and Clark Fair is approaching, and we must have funds with which to put the city into a presentable condition. Our bridges, engine houses, and elevated roads are like "the little old log cabin in the lane" whose roof was caving in and chimney falling down. The fines paid by gamblers will give us money to use for repairs. The Mayor yielded, and in a campaign speech declared that if no graver charge than using a part of the "ill-gotten gains of the gamblers for the purpose of providing these noble men [the firemen] with comfortable quarters" he brought against him at the final judgment, he will answer cheerfully. At this point, so the reports state, the Mayor received "great applause."

The extremely strained situation which has existed for some time between Canadian and American lumbermen on the St. John River, and culminated in the blowing up of a boom by dynamite on May 27, is apparently on the way to peaceful settlement. The talk is now of appeal to the Maine Legislature and to Congress for action that will conclusively settle the question of what constitutes "obstruction" of the river. This may have to be settled ultimately by a supplementary treaty. The present dispute may turn out as bloodless as the famous "Aroostook war" in the same territory in the thirties. Behind the immediate dispute, however, is a most interesting commercial question. Under an act of Congress passed in 1866, lumber sawed in the St. John mills from logs cut in the State of Maine was given free entry, and this privilege was renewed in the Dingley law. It was a tariff concession brought about by the lay of the country, which made it hard to secure an outlet from the Maine forests to American mills. It brought to both sides of the river a prosperity which is worth the study of those politicians who predict disaster from Canadian reciprocity. The American lumbermen disposed of their logs on the Canadian side, and the Canadian sawmills had New York and Boston as markets for their product. At last, however, the opening of a railroad gave a new outlet to the region. American mill owners at once declared that the free-entry arrangement had served its purpose and should be discontinued. They prepared an appeal to Congress, and meanwhile the friendly and profitable relations which existed between the two sides of the river have been displaced by armed hostility.

The return of Benjamin B. Odell, jr., ex-Governor of the State of New York, Chairman of the Republican State Committee, again makes life here worth living. For some months Mr. Odell has cruelly exposed this bantling commonwealth on the rocks. To the surprise of everybody, New York has survived the ordeal. The Legislature, it is true, with no one to stand between it and the gas lobby and other sinister influences, suffered terribly. The members were forced to pocket the money themselves, instead of having it diverted to the use of the machine and its managers. The sight drew tears to the eyes of the most hardened bosses—although Senator McCarren, a goodly band of Republican Senators, and five Tammany heroes bore up with wonderful fortitude. Gov. Higgins fell into a sad pickle. He had nobody to make his mind up for him on the mortgage-tax question, and the strain of reaching a decision so unnerved him that he appointed notoriously bad men to office. The small-fry politicians, in despair because they could not find any one from whom to take orders, began running to Platt and Black for instructions. Party demoralization could go no further. But the master hand of Odell is again on the helm, and the ship of state is safe.

The annual report of the City and Suburban Homes Company is of especial interest this year, by reason of the impetus given to the construction of model tenements by Mr. Phipps's donation of one million dollars for that purpose. The company has been in full operation since 1899, and since 1900 has paid 4 per cent. annually to the investors who have subscribed its $3,500,000. It is confident, moreover, that an increase of its capital to $5,000,000 would enable it to pay 4½ per cent. annually. There could be no better demonstration that wholesome homes can be given to wage-earners in this city at moderate rentals which will still enable the investors to make a fair profit on their investment. If the City and Suburban Homes Company had done nothing else than establish this fact beyond dispute, it would have performed valuable service. Since Mr. Phipps's first houses are to be devoted to the colored people of the city, it is interesting to note that the Homes Company reports about them as follows: "The colored people have shown themselves to be excellent tenants, quite as orderly, cleanly, and as prompt in the payment of rent as the white occupants of the Company's other buildings. There has been but one case of disorderly conduct throughout the whole year." Nearly three-fifths of these tenants nave been in residence since the opening of the buildings, and the aggregate loss to the company from irrecoverable arrears was only $16.65 in the fiscal year just ended.

The action of the Corporation of the Institute of Technology in voting, 20 to 12, for amalgamation with Harvard will undoubtedly increase the feeling of bitterness which the proposal has created among a great majority of the alumni. Most of the graduates believe that their wishes should control, and that they are fighting for the future usefulness of Technology. To them its removal to Cambridge means the subordination of the work of the Institute to that of Harvard College. They maintain that the scholastic spirit at Harvard is not nearly so earnest and thorough as that at Technology, and they do not wish their future undergraduates to be brought even remotely into contact with the spirit of snobbishness and the aristocracy of wealth they charge upon Harvard's undergraduates. The Technology faculty, too, is strongly in opposition. It now remains for the courts to pass upon the legality of the proposed merger before it can take effect. What appeals to the outsider is the desirability of having one great technical school at Boston instead of two. There is virtue in amalgamation even in the world of education, and there must be other good reasons for it when the corporations of both colleges are so earnest for the consolidation. It is a great pity, however, that, if the new relationship is to be formed, the process should be accompanied by so much bad blood, by so many charges and countercharges of misrepresentation as have been current these last six months.

To depose a king not only in conformity to the rules of parliamentary order, but in complete tranquillity of mind, is something of a feat, and the Storthing, at Christiania, which on June 7 repudiated the Act of Union, declared there was no longer a King of Norway, and estab-

lished the old Ministry as a provisional government, certainly must go down in history as an admirable exemplar of *sang froid*. Compared with the fact of a determination to dissolve the union, the technical arguments by which the vote was sustained are of merely local interest, and it must suffice to say that the Norwegians meet the argument that the Union of 1814 is not only indissoluble but unalterable except by consent of both parliaments, with the assertion that King Oscar, by declining to establish a new Government, has abdicated his royal function. What is plain is that Norway means to go her own way, and the only surprise is that the vote of deposition requests the King of Sweden to nominate to the Norwegian throne a prince of the line of Bernadotte.

The underlying causes of the declaration of independence are found primarily in the more democratic nature of the Norwegian state (where manhood suffrage and a governing parliament exist as against limited suffrage and a restricted parliament in Sweden), in the desire for foreign trade in maritime Norway as against the protectionism of agrarian and industrial Sweden, and, finally, in the looseness of the bond of union itself. Where the two Powers treated each other as foreigners at their respective custom houses, where Sweden alone represented the united kingdom before the diplomatic world, and the only symbol of the union in Norway was the royal presence, occasionally, and veto, which might be, and was, at times, overruled—evidently union meant rather little. There is, fortunately, slight prospect that Sweden will exercise her technical right to force Norway to stay in the union. Norway is already an independent State.

Cœlebs in search of a wife had no harder task than Norway in quest of a King. If King Oscar of Sweden should remain obdurate and refuse to name one of his sons; and if King Christian of Denmark, whose family has already supplied queens to England and Russia and a king to Greece, should feel that his contribution to monarchism is complete, it is hard to see where the Norwegians would turn for a ruler. In fact, the supply of royalties for a new State is almost always deficient. Only Servia and Montenegro, of recent royal establishments, have managed to provide a ruler at home. For Rumania a Hohenzollern had to be found, for Bulgaria a Saxe-Coburg. The selection in the present case is complicated by the fact that not every poor relation of a royal house will do. Plainly, no near kinsman of any of the great sovereigns would be acceptable to the rest. As for the crew of ex-royalties and pretenders that enliven watering-place life for unoccupied old maids of English and American extraction, the whole roster of Bourbon, Orleans, and Bonaparte would hardly furnish one eligible. As a personality and because of the close association of the houses of Bonaparte and Bernadotte, Prince Louis Napoleon might seem an attractive possibility. But his Russian major-generalcy seems to rule him out. In fine, for lack of suitable candidates for the throne, Norway may be reduced to republicanism—a form of government which, while contrary to all political tradition, would fit very well the present temper of the nation.

If the comic muse ever condescends to mere history, she will find material for humor in contrasting the attitude of Mr. Roosevelt towards the provisional governments of Panama and of Norway. Acting Secretary Loomis, we need hardly recall, inquired solicitously about the condition of the Republic of Panama some little time before the pang of mock revolution had brought the bantling commonwealth into the world. It was on this occasion that the scholiasts advanced the theory that Mr. Roosevelt's dominant quality was celerity. Turning from Panama to Christiania, these same pundits may draw the profound inference that circumstances alter cases, and that even celerity has its good and bad days. If ever there was a *de facto* government, it is Norway's; she has a parliament in session, an executive council of ministers, an army, and a navy. Moreover, it was known for some days before the resolution deposing King Oscar that secession was as good as accomplished, and divil a cablegram came from "Loomis, Acting." All of which seems to point to a culpable negligence in the Norwegians in failing to keep Washington officially posted as to the revolutionary schedule. Or is Mr. Loomis's hesitation due merely to a natural reluctance not to be caught again by the difference in time?

Premier Rouvier assumes the portfolio of Foreign Affairs with professions of friendliness to Germany, and with an engagement to consult Berlin on Moroccan matters. This satisfies the desire for recognition as a Mediterranean Power which Bülow and other spokesmen of Germany have persistently put forth. The question now is, Will Germany be satisfied with this concession to *amour propre*, or was the complaint merely a mask for more definite aspirations in the Western Mediterranean? In this matter one should not give too much weight to the expressions of the Pan-Germanic newspapers, which have already staked out a colony on the Atlantic littoral; Pan-Germanism, potentially a peril, has as yet hardly reached the level of serious political movements. More disquieting is the certainty that Count von Tattenbach has constituted himself the Sultan's guardian, and that German companies are receiving large concessions at Tangier. These activities show pretty clearly that the Kaiser wishes more than reparation for a past slight. It is evident, too, that Premier Rouvier, confronted by this aggressive policy of Germany, must either yield, or, returning to the tactics for which he virtually dismissed M. Delcassé, must take his stand firmly, beginning, if necessary, the actual occupation of the Sherifan domain. With the more idealistic statesmen, Pressensé, Jaurès, and others, Rouvier has thought it necessary to reorganize the Foreign Office on the theory that Germany had a just grievance, and that a mere recognition of her Mediterranean standing—ignored in the Anglo-French Agreement—would restore good feeling. Events will very soon put to the test the belief that German intervention at Fez was dictated by motives in the main sentimental and disinterested.

From diverse points of view, Chancellor von Bülow deserves the princely title and estates the Kaiser has bestowed upon him. The Moroccan diplomatic "success" undoubtedly gave the Kaiser the excuse for once more offering this honor, several times declined hitherto. But even if the outcome of the Tangier episode had been a different one, the Emperor would still have had reason to be satisfied with Von Bülow's services. In the first place, the Chancellor has shown himself to be an orator of great ability and a parliamentarian of no little distinction. He has, moreover, a charm of personality which has helped to give him a firm footing at court, and he has warmly seconded the Emperor's propaganda for a great fleet and an enlarged army. So far as foreign politics are concerned, there is no doubt, too that Von Bülow has achieved very considerable successes, one of his latest triumphs being the negotiation of reciprocity treaties when in some cases this seemed impossible. Despite the constant friction with England, foreign relations as a whole are in a very satisfactory state, and many observers attribute this to Von Bülow's skill in checking the impulsiveness of the Kaiser. From the Liberal and Socialist point of view, however, Von Bülow's honors seem highly paid. In international affairs—as in Germany's relations to Russia—the Chancellor represents the reactionaries. Social reforms receive little or no encouragement at his hands; he constantly inveighs against freedom of speech and of the press, and he has bought his legislative triumphs and held his Reichstag majority together by concessions to the Clericals (especially the Catholics), to the Agrarians, and to the protected interests, which will cost Germany dearly for decades to come.

THE BATTLESHIP ON THE DEFENSIVE.

Says the London *Times*, speaking of the battle of the Sea of Japan, the question which all the world is now asking is with what weapon Togo achieved his success. Particularly in Washington is the effect of Rozhestvensky's defeat upon the future of the battleship being carefully studied. Mr. Roosevelt, it will be remembered, insisted that the last Congress should appropriate money for at least four more battleships. Cruisers, scouts, torpedo boats might go hang; the safety of the nation was assured only by the battleship. Against its wishes as expressed in the protest of men like Senator Hale, Congress was forced to do his will to the extent of providing two more monsters of the sea, costing their five millions or more each. Naturally, there will be feelings hurt if, before these new ships are even planned, their value is shown to be far below the estimates.

Whether the naval world will ever know the exact methods by which the Japanese achieved success, will depend upon the readiness of a silent people to give their side. So far as the reports thus far received go, it may be accepted (1) that the battle was won in the first few minutes by the ferocity of the Japanese attack and the accuracy of their fire; (2) that perhaps, by reason of the high sea prevailing, the use of the torpedo boat was of a secondary nature, to give the *coup de grâce* to silenced vessels or to prevent Russian ships from breaking through the encircling Japanese; (3) that the prestige of the battleship has suffered enormously by reason of the slaughter on its decks and the easy destruction of the upper works of the "floating fortress." Striking confirmation of the last point is to be found in the reported results of the attack on the captured battleship *Orel*. She received a "terrible battering"; her hull shows forty gaping holes made by large shells, and many smaller apertures, while her upper works and decks were "riddled by shells, shot fragments, and splinters." From the main deck upward the condition of the vessel was "terrible to behold." It will be necessary to reconstruct her above the waterline, but the "*main armor belt is intact*," and her turret armor generally withstood the battering from shells, except in the case of two six-inch turrets. In short, the armor performed its duty fully under a terrific cannonade, but could not prevent the ship's being quickly put out of action as a fighting unit. It helped her to stay afloat, but she might as well have sunk after her upper works were shot to pieces, her crew practically reduced to submission and unable any longer to work their guns. In short, the damage quickly done to the battleship's unprotected portions more than offsets the advantage gained by having an armor belt.

This salient fact has made a deep impression upon Park Benjamin, the naval authority, who points out in the current *Independent* that although on the *Borodino* the crew was mainly disposed in eight separate armored turrets, this did not prevent the "wholesale slaughter of their crews, and prompt destruction of ammunition hoists and other vital mechanisms." He thinks that a still more frightful slaughter would have occurred in such vessels as our *Kentucky* and *Kearsarge*, "where most of the crew is massed in a single huge, weakly protected compartment." Mr. Benjamin wonders whether "any construction could be devised more certain to sacrifice life than this," and asks whether it is not time to heed the logic of events and seriously consider "whether ships which cost over five millions each, but which can be turned into slaughter-houses above water, and which a couple of hundred pounds of gun cotton can send plunging to the bottom, are, after all, the best sea weapons. . . ." Obviously they are not. Indeed, the torpedo boats at Port Arthur silenced the extreme advocates of the battleship, as Mr. Benjamin observes. Even a high English authority admits in *Brassey's Annual* the ease with which a battleship may be made valueless while her armor is uninjured. Meanwhile the vulnerability of the battleship to torpedo attack remains as true to-day as in 1864, when the monitor *Tecumseh* was sunk in Mobile Bay. Automatically closing watertight compartments and steel bottoms have added no security, as was shown by the loss of the *Hatsuse*, the *Yashima*, and the *Petropavlosk*. Four of the heavy Russian vessels are even reported to have "turned turtle" when one of the longitudinal compartments filled with water—so easily upset is the equilibrium of these topheavy structures.

Just what direction the reaction from battleships will take cannot, of course, be definitely foretold at present. Those who believe in a modernized monitor with the lowest possible freeboard will now have their say. Their great arguments are stability of the gun platform and smallness of target. Primarily, we believe, the armored cruiser will come into greater vogue. Admiral Rozhestvensky's report is significant. He lumps the twelve Japanese armored vessels—battleships and armored cruisers—together in one class. And well he may, for the latter are more easily manœuvred, carry less weight, and have a far superior speed. They have come out of the war with greater prestige than any other class of vessels, and this despite the loss of the *Rurik*. This vessel, be it noted, was silenced by two unarmored cruisers seven years older than their victim, and, being dismantled above—precisely like the *Orel*—was sunk by her own officers. If the armored cruiser is to take, for the moment, the place of the but little more expensive battleship, we must admit that there is small comfort in this for the advocate of peace, or for the taxpayer who is mulcted for these costly engines of war. At the same time it is some gain to have the Roosevelt theory of battleships wholly unsettled, and a naval enthusiast like Mr. Benjamin admitting that one of the lessons of the war is a smaller navy for the United States.

THE NEW TURN IN THE EQUITABLE.

The supremely important fact about the sudden turn in Equitable Life matters is that the company is saved from a situation the possible end of which was liquidation and disappearance of the Society from the financial field. This calamity—this "deep wound to our national prestige," as Mr. Cromwell had foreshadowed it—is averted. The management, whose continuance in office was incompatible with the company's continued efficiency, has resigned; reform of the grave abuses exposed by the Frick report is promised. So much is in sight towards the rehabilitation of the company.

For the complete restoration of the community's confidence in the Equitable, however, much more is necessary. This would be true even if so ideal a solution as repurchase of all its stock, by the Society itself, has been judged practicable and had been effected. Even then the closest scrutiny would have been bestowed on the influences which appeared to affect the policyholders' selection of trustees. Necessarily, this somewhat critical vigilance must be far more complete when ownership of the company has admittedly passed to a syndicate, one at least of whose members is engaged in large promoting enterprises and is a potent figure in the Wall Street market. The question universally asked, since Friday evening's announcement, is, What is to be the effect of Mr. Ryan's ownership on the future policy of the company?

We may conceive of a $4,000,000 payment for stock whose investment yield can never exceed some $3,000 per annum, being made from the highest motives of philanthropy, or, if a less lofty motive be inferred, from fear lest the state of things threatened by the Equitable's recent troubles might endanger other important enterprises dependent on public confidence. We shall certainly not insinuate that the gentlemen in the Ryan syndicate were actuated by any less worthy purpose. Their plan for trusteeing the stock, and for divesting the syndicate of voting power, is fair; and the promise that policyholders shall dictate a clear majority of the new directors is an important concession.

But the new owners of the Equitable must know that its future success de-

pends, not on indefinite promises or pledges, but on raising the company's future methods and practices beyond the reach of any controversy whatever. This being true—and we think it will not be denied—it follows that the Ryan syndicate must place beyond question its permanent renunciation of control, direct or indirect, over any future action of the company. It is the perfectly well-known truth that transfer of Mr. Hyde's stock to any person or group of persons identified with Wall Street was bound to inspire suspicion; such suspicion, just or unjust, cannot be allayed except by the utmost publicity regarding the whole transaction. We do not consider the trusteeship announcement sufficient. The contract of purchase with Mr. Hyde, whether written or verbal, ought to be published in all its terms. If there be a written contract defining the duties and powers of the trustees, that should equally see the light of day.

Still more necessary, we think, is a full and conclusive statement by the syndicate as to its plans with regard to the stock control. Trustees may resign or die; directors and officers will change in the course of years, as they are likely to change in consequence of this new development. But the ownership may, so far as the public knows, rest permanently in the hands of the present purchasers and their heirs. That is to say, recurrence of precisely the situation which has so nearly wrecked the company will always be possible so long as the basis of the Equitable's financial structure is stock ownership. We should like to see, first, the formal opinion of eminent lawyers as to whether or not buying in of the stock by the Society itself is feasible under its present charter. If their opinion is adverse, we are strongly of the opinion that the question of such amendment to the charter by the Legislature as should make possible that purchase, ought to be taken up at once. All of these matters must, in fulfilment of his duty, be set forth in the Insurance Superintendent's report, which is expected to-day. Mr. Hendricks has the power to call for all contracts and documents to which we have referred, and to make them public. We think he will scarcely shirk this obvious duty.

We have thus far refrained from commenting on the selection of Mr. Paul Morton as the head of the reorganized Equitable. Our judgment of Mr. Morton's railway career has been too plainly expressed for our readers to expect our approval of his selection for this office. We have felt that its incumbent ought to be a man whose business record was beyond suspicion. That Mr. Morton is not such a man, is sufficiently proved by the fact that his career as railway manager is at this moment under investigation by the Government's lawyers. We regret the necessity of thus criticising any one chosen in so grave a crisis for so important a task of financial reconstruction; but it has long been evident that nothing but plain and honest speaking would be of any avail in the Equitable's dilemma. These very doubts about the new chairman of the Equitable; the fact that, whomsoever the trustees may choose as a directors' board, Mr. Morton is the syndicate's appointee, and is apparently expected to retain his office, add greatly to the force of what we have already said regarding the further requirements of the situation.

EXISTING PENSION SYSTEMS FOR COLLEGE PROFESSORS.

The establishment of the Carnegie Foundation, creating a retiring fund for professors in the various colleges, calls attention anew to the inadequacy and complex character of many of the existing systems. A retiring pension for professors similar to that employed in the army and navy and for the justices of our highest court has been in vogue at various universities for some time. Where no definite system had been formulated, it has been the custom in many cases to make provision for retiring professors, granting to them, after long and distinguished service, either one-half or two-thirds of the salary received upon resignation.

Princeton University has for many years made provision for its professors, but not systematically. Columbia University provides that any person in its service by appointment of the Corporation, who has held an office higher than the grade of assistant professor for fifteen years or upwards, and who is sixty-five years of age or over, may, at his own request, or upon the motion of the trustees, be retired from the date of the beginning of the next succeeding fiscal year, with a retiring allowance of one-half of his last annual salary. The Corporation retains the right to alter this rule, without, however, abridging the rights which individuals in the service of the University shall have acquired under it. In case the age of sixty-five has been reached by a professor who entered the service of the University at an equal grade at an unusually advanced age, the Corporation may, at its discretion, add a number of years, not exceeding fifteen, to his actual years of service, as a basis for his retiring allowance. The committee is required to satisfy itself that the person proposed for such pension is entitled to the distinction by reason of the length and character of his service to the University, and also by reason of eminence in his profession. There is no special fund from which such pensions are paid, but the charge is made against the general income of the University.

The rules of Harvard University show a careful study of all questions involved, and embody a graded system, recognizing length of service as the basis for a pension. This corresponds to that in use in our army and navy, and constitutes a proper service-pension. The rules provide that any person in the employ of the University who is sixty years of age, and who has held an office of the grade of an assistant professor or of a higher grade for twenty years, shall be entitled to a retiring allowance of twenty-sixtieths of his last annual salary in activity, and to an additional allowance of one-sixtieth of his last annual salary for each year of service in addition to twenty; but no retiring allowance shall exceed forty-sixtieths of his last annual salary while in full activity. In counting the years of additional service, an appointment with the title of tutor, instructor, lecturer, or assistant in a scientific establishment on an appointment not annual, may be added, at the discretion of the President and Fellows, to the years of service as assistant professor or in a higher grade. No person under sixty years of age shall be entitled to a retiring allowance, but the President and Fellows are empowered at their discretion to pay to any person who, while in the service of the University, has become incapable of discharging his duties by reason of permanent infirmity of mind or body, or has resigned before the age of sixty, an allowance not exceeding that which he would be entitled to receive if he had reached the age of sixty. No person who has been in the service of the University less than twenty years shall be entitled to a retiring allowance, but the authorities are empowered, in case a professor enters the service at an unusually advanced age, to add a certain number of years at their discretion (not exceeding ten) to his actual years of service, and such persons may be granted a retiring allowance as soon as their total services, including the constructive addition, reaches twenty years. A professor may be retired by the President and Fellows at the age of sixty-six years upon the retiring allowance to which he is entitled. Years of absence upon leave are to be counted as years of active service. The rules may be altered, without, however, abridging the rights which individuals shall have acquired under them. The notable features in these rules are a pension graded according to length of service, and the privilege of a voluntary retirement at the age of sixty years.

The University of Toronto has a system of compulsory contribution on the part of the professor, to constitute a retiring fund. The interest upon this fund is compounded semi-annually at the rate of 6 per cent. per annum, and the entire sum is given to the professor upon retirement, or to his heirs in case of his death. In order to meet in part

this tax upon the income of the professors, salaries were proportionately somewhat increased. The professor receiving a salary of one thousand dollars contributes 5 per cent. of his salary to this fund; between one thousand and eighteen hundred dollars, 7½ per cent.; between eighteen hundred and twenty-five hundred, 10 per cent.; between twenty-five hundred and thirty-two hundred dollars, 15 per cent.; and over thirty-two hundred dollars, 20 per cent. This system is practically that of the savings-bank. The University authorities become the custodian of a certain part of the professor's salary, and he is necessarily deprived of the use of his property and the possibility of its wise increase. It does not appear that any provision is made for an addition to this sum by gift from the University. There is no rule of compulsory retirement, and there is no fixed date for retirement.

McGill University has no statute governing the pensioning of professors. There is, however, a pension fund at the disposal of the Board of Trustees. On the recent resignation of two professors after forty-six and thirty-one years' tenure of their respective chairs, they were granted a retiring allowance for life. No contribution, compulsory or otherwise, is made by the members of the staff to the pension fund, which consists of an endowment established by the munificence of three members of the Board of Trustees.

The system at Cornell University embodies the onerous and complex features of the University of Toronto, but exhibits a certain improvement in that the University makes a positive contribution to the sum contributed by the individual professors. The statute fixes a graded sum which every professor must contribute in two semi-annual payments, and which may begin at the age of thirty. This sum at thirty years of age is $33, at forty $53, at fifty $97, at fifty-nine (the latest date at which a professor can avail himself of this privilege), $208. It is assumed that the amount of the contribution of the professor will be one-fourth of the amount of his ultimate pension. The total pension payment to each professor is fifteen hundred dollars per annum, after reaching the age of seventy. No provision is made for the voluntary retirement of the professor before this age, nor for his enjoyment of any pension before that date. There is also no provision for teachers of lower grades; neither is a definite period of service in the University designated as preliminary to the enjoyment of a pension. In case a professor should die before reaching the age of seventy, his contributions, compounded semi-annually at 3 per cent., are returned to his family. This system is defective in that it fails to make general provision for all professors, and from the fact that in a majority of instances the professor will fail to receive any return from his compulsory contribution.

According to the tables of mortality, the prospect of life at the age of thirty is a trifle over thirty-four years; at forty, twenty-seven years; at fifty, twenty years; at fifty-nine, slightly above fourteen years. Any insurance entered upon on these terms up to fifty years will necessarily involve loss on the part of the professor in a majority of cases. If, however, the annual tax at thirty years be accumulated at 5 per cent., this sum will amount at seventy to $4,217, thus being sufficient of itself to discharge the pension for three years. If entered upon at forty years of age, the sum will reach $3,720; at fifty years of age, $3,399; at fifty-nine years of age, $3,180. In case of death at seventy before entering upon the enjoyment of a pension, the amount returned at 3 per cent. would involve a loss to the family of $1,643, if repaid at the lower rate of interest. This assumes that the University receives 5 per cent. upon its investments, which is less than its actual returns reported at the present time. After thirty years of insurance, there would be a similar loss of $1,106; after twenty years, of $679. A sum corresponding to the tax fixed by the University, if invested similarly in a life annuity, would protect for the entire period of the life of the individual and secure a definite payment at the end. The professor, then, contributes a sum sufficient to meet his own pension for the two or three critical years after reaching the age of seventy, and the University assumes no responsibility until this sum is exhausted. The real pension thus begins at seventy-three. An irksome tax and complex bookkeeping would in this case be avoided, and a better result reached, if a bona-fide pension of one thousand dollars were paid by the University to each professor on reaching the age of seventy.

Yale University provides a pension for any professor or assistant professor who has served for twenty-five years and has reached the age of sixty-five. He may then be retired at his own request with a retiring allowance of one-half his last annual salary. In the case of any person of the age of sixty-five who entered the service of the University at an unusually advanced age, the Corporation may, at its discretion, add a number of years (not exceeding fifteen) to his actual years of service as a basis for granting him a retiring allowance. This act, which was passed in June, 1896, was amended in 1903, so that it provided for the compulsory retirement of all University instructors at the age of sixty-eight, except in individual cases where, by special vote, the Corporation might determine otherwise.

These various systems differ as to the age at which the professor may be retired, the period of preliminary service requisite, and the voluntary or compulsory nature of his retirement, and also respecting the right of assistant professors to enjoy a pension. They will undoubtedly be harmonized and made uniform by the Trustees of the Carnegie Foundation. Less attention has been paid to that feature of the Foundation which requires that it shall make provision for the widows and families of "the said teachers." The form in which to make this provision, which is in effect in most of the German universities, will present a question not previously settled in our American university system.

M. DELCASSÉ'S RETIREMENT.

In 1889 Théophile Delcassé, journalist, was returned from the *arrondissement* of Foix in the Pyrenees. He received a vote of 10,691, which gave him a comfortable majority over his Royalist opponent, who received, however, 7,986 votes. For sixteen years, then, M. Delcassé has been in national politics, always representing Foix in the Chamber of Deputies. In the last general election, April, 1902, his constituency gave him 13,735 votes against 2,648 polled for a Socialist candidate and 1,871 for a Nationalist. This dry comparison of electoral figures is not without weight. It recalls that, when M. Delcassé first entered the Palais Bourbon as a Deputy, the Republic was on its defence, royalism still a menace, the "man on horseback," Boulanger, not yet exposed in his true emptiness. Thirteen years later, in the nation as in the historic district of Foix, Republicanism had become firmly established, and the Opposition had, from a compact body of Royalists, reduced itself to scattering and innocuous groups of violent Socialists and Nationalist malcontents. In this change M. Delcassé has played a conspicuous part. He has rehabilitated France before the nations. Her voice is again potent in international councils. He has given to a rather despondent loyalty grounds for exultation. Less sensational than M. Hanotaux's contribution, the Franco-Russian alliance, M. Delcassé's legacy of good will with Italy and England is more permanently valuable, and this should especially be said when the check in Morocco and a trifling setback in the matter of the Abyssinian railway give to an administration remarkably successful in the main a valedictory impression of failure.

M. Delcassé, like his great associate, the late Waldeck-Rousseau, was peculiarly fitted for the work of Republican defence. Both were avowed disciples of the great Republican, Gambetta. Delcassé first attracted the attention of the Government by his articles in Gambetta's paper, the *République Française*, for which in 1887, he received the ribbon of the Legion—from a Rouvier Ministry, we believe. Accepting a Co-

lonial under-secretaryship under Ribot in 1893, he soon saw that the subordinate position of the Colonial Office, then a dependency of the Naval Ministry, prevented effective work, and it was chiefly at his instance that several years later Casimir Périer's Administration created the Colonial Ministry. As Colonial Under-Secretary and then as Secretary, M. Delcassé pushed vigorously the plan of exploratory and military expeditions in the Niger basin, thus beginning that delimitation of Northern and Western Africa which later he hoped to perfect through the Anglo-French convention.

When Moderate Republicanism began to go stale—a process completed under Méline—M. Delcassé became a private member again and associated himself with the Radicals. It was in 1897 that, speaking as a private member, he outlined that great plan of compromise which was to end the secular animosity between Great Britain and France. In an analysis of all the possible cases of collision, he tried to demonstrate that each and all admitted of honorable arbitration. When a year later he replaced Gabriel Hanotaux in the Foreign Office, this conciliatory attitude towards England was put to the severest of tests. Hanotaux was retired, wearing gracefully the laurels of Dunkerque and Cronstadt; Delcassé was pitchforked into the Fashoda affair. For the Marchand fiasco he had made himself responsible when Colonial Secretary. He shouldered the responsibility and resultant unpopularity like a man, explaining practically that the Marchand mission had been in the nature of a feeler. It had taken its chance and had lost. This was sensible but most unpalatable doctrine, and the people have never yet fully forgiven M. Delcassé the humiliation of Fashoda. Before the world, however, he won the distinction of frankly avowing a bad miscalculation, and of facing a difficult issue of national honor without selfishness or sentimentalism. It was his diplomatic baptism of fire.

In the seven years that have elapsed since then, M. Delcassé's successes have been too numerous to admit of rapid enumeration, too well known to require especial comment. One need only recall the remarkable series of royal visits to Paris—Hanotaux himself was no more noteworthy as an exhibitor of crowned heads—the arbitration treaties with England and Italy, and more especially the Anglo-French *entente*, which adjusted, perhaps, a wider range of contested points, considered both geographically and numerically, than any similar document since diplomacy began. Here it should be noted that, whatever the outcome of the Morocco affair, the general value of the Anglo-French Agreement stands unimpaired. It has removed from international politics at least three sources of irritation—in the Sudan, in Newfoundland, and in the Morocco hinterland—and it has pointed the way for a rational and humane settlement of other outstanding disputes.

Into the merits of M. Delcassé's contest with the German Foreign Office we can go only very summarily. M. Jaurès last April roundly scored the Foreign Minister for his failure to consult Germany throughout the Moroccan negotiations. This rebuke, which was promptly followed by M. Delcassé's resignation, was later retracted in part. But recently M. Jaurès filed notice of another interpellation on the matter, only to withdraw it after the Cabinet meeting at which M. Delcassé offered his definitive resignation. We judge, then, that the attack upon him for failure to inform Germany of his Moroccan intentions was to have been renewed, and we feel that this was a pretext, and not a particularly fair one, to force his retirement from the Cabinet. For obviously no maladroitness of his own, but circumstances, have thwarted the Moroccan plan. To have consulted Germany in the first instance would have been to invite a check at the outset. She never would have assented either to French preponderancy or to an Anglo-French condominium. Against a resolute trouble-maker there is no peaceful recourse, and M. Delcassé's chagrin is due merely to the fact that, since the Russian reverses, Germany feels free to play that rôle of meddler which a few years ago would have been too dangerous.

The real reason for M. Delcassé's retirement seems to be insubordination, or what Premier Rouvier regards as such. It has been known that the Prime Minister was exercising a supervision to which the veteran Foreign Secretary was unaccustomed, and which he by no means relished. Not improbably, too, M. Rouvier has resented the general conviction that M. Delcassé was indispensable. Certain business houses, under such circumstances, give the indispensable officer a prolonged vacation. Whatever be the immediate cause of M. Delcassé's resignation, it is most regrettable. If personal infirmities of temper may have played some part in the event, there is all the more reason for recalling the great services he has rendered to France and to the world, and for hoping that his rare abilities may again find a field in international politics. Finally, no one should be oblivious to the pathos of a self-abnegating diplomatic career which began with Fashoda and now is rudely broken by the German mission to Fez.

"SATURNALIA" AND MUSEUM LOANS.

The decision in favor of the Metropolitan Museum, in the Biondi case, brings museum loans for the first time under judicial interpretation, and raises, besides, certain interesting questions in museum management. The contest was waged about the colossal bronze group entitled "Saturnalia," for which the sculptor Biondi had received a Grand Prix at Paris. It represented, with a technical skill of which the prize is sufficient evidence, a reeling group of degenerate Romans, men and women, returning from a debauch. The subject, which to be at all acceptable required all the mitigations of art, is rendered doubly offensive by the large scale of the composition and by an aggressively realistic treatment. The work is not immoral—indeed, it might afford a text for a homily *de inebrietate;* but it is disgusting to all except such realists as admit no issue of taste whatever.

A bronze group consisting of many figures and some thirty-odd feet long, cannot be set up in the average genteel residence. In fact, "Saturnalia" was frankly what the French call a "machine," an object primarily to create its sensation in a public exhibition, and, if possible, to be sold to the only possible customer, a public museum. In pursuance of this latter end, Signor Biondi sent "Saturnalia" to America, the land of big things, and during the Buffalo Exhibition the group graced the side-show, "Venice in America," at the closing of which it became homeless. But Signor Biondi's representatives had already entered into correspondence with Gen. Cesnola, the late Director of the Metropolitan Museum, with a view to first lending, and if practicable selling, "Saturnalia" to that institution or elsewhere. The loan Gen. Cesnola accepted gladly, engaging to exhibit the group for a year, signing the customary receipt, and assuming Signor Biondi's bond at the Customs. To the idea of purchase Gen. Cesnola also lent a kindly ear. Letters offered in evidence show plainly that, had he dared, he would have recommended the purchase of "Saturnalia" by the Museum; that, in fact, he considered himself, in a fashion, Signor Biondi's business agent in America. For this strange infatuation and this equivocal agency no explanation has ever been offered. At a private view, the trustees of the Museum decided that it was inexpedient to exhibit the group. "Saturnalia" went to the cellar, Signor Biondi sued for breach of what he held was a contract to exhibit his work, and for damage to his artistic reputation; Gen. Cesnola accepted placidly a reversal of his judgment which was virtually a reprimand.

In justice to Signor Biondi, it should be said that he has met with a cruel and unmerited disappointment, and on all personal grounds deserves sympathy. It is no comfortable position for a sculptor to find that he possesses in a distant land some tons of bronze that nobody wants, and Signor Biondi had no reason to doubt either Gen. Cesnola's good will or authority over Museum matters. It

may be granted that the Italian sculptor thought, and with good reason, that he had a contract by which "Saturnalia" must stand a year in the first museum of America. The court, however, naturally regarded the matter impersonally, and went straight to the point, Was there or was there not a contract to exhibit? and, granting that a *prima-facie* contract existed, had the Director of the Museum the authority to make it binding upon his trustees? On both scores the court ruled in the negative, opining that whatever papers Signor Biondi held from the Director of the Museum were merely in the nature of a receipt for the group, and not a contract to exhibit it. In equity, however, Judge Leventritt found that (since through the misunderstanding "Saturnalia" had outstayed the year allowed by the Customs, and could remain in America only on payment ot substantial duties), the Museum should, if desired, deliver the bronze to the artist in Italy at its own cost.

As for the question of authority, the decision rests upon the simple grounds that the servant is not greater than his lord. The governing body of a corporation has the right to supervise, or even to reverse, the actions of its employees. It should be added, however, that to reverse the policy of a museum director in a matter of any moment is to vote no confidence in him, and ordinarily should be interpreted as a request for his resignation. As a rule, the director must be the actual executive of a museum; but the board, or ministry, or final authority of any sort does not, by habitually delegating its powers, abdicate them, or waive its right of exercising them directly.

More novel is Justice Leventritt's characterization of the transaction between a museum and the lender of a work of art. He failed to find that any contract existed: "There was expressed only a willingness on the part of the Museum that the plaintiff might have the right to exhibit his group, revocable at the will of either party." In an earlier discussion of the Biondi case, we took the ground that, in a museum loan, the elements of mutual consideration and advantage are so obscure that the transaction can hardly be reduced to the terms of a commercial contract. To have one's pictures stored and insured for a certain period is an advantage calculable in cash, but the enhancement of value they may receive through being approved by a famous museum cannot be computed, nor can the value to a museum of a fine picture transiently on its walls. In other words, the transaction, by common sense, and now by legal precedent, seems to fall into a rather vague category of courtesy agreements. It was perhaps below the dignity of the court to cite the analogy, say, of the free checking-office at the entrance of the Museum, where, in exchange for your walking-stick, you receive a check. That receipt does not bind the custodian to put your stick in any particular compartment. It merely engages that on demand you shall get it back. Such a parallel brings into pleasing correlation the creators of gigantic groups like "Saturnalia," the wealthy connoisseurs of the city, and the humblest visitor.

THE WHISTLER EXHIBITION AT THE ÉCOLE DES BEAUX-ARTS.

PARIS, May, 1905.

It is the turn of Paris to honor the memory of Whistler, and a memorial exhibition of his work, opened with all form and ceremony by the Minister of Fine Arts, is now being held at the École des Beaux-Arts. As a sequel to the recent show in London, it gives an admirable opportunity for the further study of Whistler and his art. The International Society—his society—succeeded in getting together a wonderful collection of many of his finest paintings, as well as an almost exhaustive series of his prints, and the organizers of the French show have profited by their labors. Many of the pictures that were in London have been transferred to Paris, but there are also many that were not in London, so that the new show is something more than a mere repetition of the exhibition just held on the other side of the Channel.

Comparison, it must be confessed, is by no means in favor of Paris, for the Beaux-Arts has not the advantages of the New Gallery when it comes to arranging and hanging pictures and prints. The space is limited to one large room upstairs, and even this is so small in proportion to the quantity of work shown that it has had to be divided into alcoves, while the hall downstairs on either side of the great stairway has had to be used for the etchings. There is no such striking effect on entering as there was at London in the white-draped court reserved for the royal collection of prints; nor, in the hall above, broken up into its several divisions, is there the distinction of that one large room in London with its array of masterpieces. The arrangement of the new galleries at the Louvre has proved, if proof were needed after Dresden and so many other Continental museums, what a serious mistake this system of alcoves is, and how, seen in them, even the work of the master must suffer. To make matters worse, the lighting of the big hall at the Beaux-Arts is very poor, and there are certain Whistlers that never, at any hour, have I managed to see properly, if at all. Moreover, for a background to the paintings and prints alike, choice has been made of a gray which, in a gallery with a top light tempered by the velarium Whistler always insisted upon, might be right enough, but which here, where there is only a side light and an unfriendly one at that, is worse than ineffective. As M. Jacques Blanche pointed out to a French critic, it seems to absorb whatever light there is, and the pictures are left dull and colorless. On it the mystery passes from the nocturnes; and a picture like the "Miss Alexander," so triumphant where it hung at the end of the large room at the New Gallery, hardly tells. I thought the strong green background in London ill-advised, but even the effect of the green there was preferable to that of the gray in the light of the Beaux-Arts Gallery.

A more serious mistake has been to include too much in the collection. Where space is limited, it is best to recognize the fact, and to show in it no more than can be shown well. It would have been a gain to the larger paintings if fewer small ones, fewer little pastels and water-colors, had been scattered among them, even if, as a result, the number of contributions from a prominent American collector and from Whistler's estate had been reduced. The gain would have been still greater if much of the unfinished work exhibited had been left out altogether. It is interesting, of course, to see an artist's studies and sketches, but I am referring more particularly to the pictures that, evidently, Whistler either had not time or never had the intention to finish. If space at the Beaux-Arts were unlimited, it would matter less; but, under the circumstances, unfinished work might easily have been spared to give more room to the finished, or to have warranted greater effort in obtaining a still larger number of the more important canvases, many of which are now missing. There is an impression among people who know nothing of Whistler's art, and care less, that he could not finish a picture—that Sir Edward Poynter was right, that he was the "idle apprentice" who never mastered his trade as a student, never, throughout his life, learned the secret of application. When one considers the greatness and scope of his accomplishment, it is all the more regrettable, all the more unnecessary, that anything should be done to add to this impression just at the moment when the world—what with Boston, and London, and now Paris—is given the first opportunity to see and study and begin to appreciate his work.

It has been stated that the Paris collection has the inestimable value of containing exactly those things which Whistler himself, foreseeing a memorial exhibition, planned that it should contain. It is extraordinary that Whistler, who during his life was never willing to show his work until it was finished—until all traces of how it was done had disappeared from it—who rarely would let a canvas leave his studio, if he could help it, until it had ripened and mellowed with time, should have been eager to be represented after his death by paintings as entirely unfinished as are many of those exhibited. It was a desire in contradiction to his life-long theories. Anyway, the collection in London, where the unfinished picture was rare, seemed, as tribute to his genius, far more in accord with his own practice. Of the two shows, it is in the one organized by the International Society that greater discrimination in the choice of the paintings and their arrangement was shown.

I do not intend to suggest that there are not many things in Paris I should have been glad to see in London. If at the Beaux-Arts the "Carlyle"—there is a report that it is to appear before the exhibition closes—the "Mrs. Huth," the "Mr. Leyland," the "Fur Jacket," the "Irving as Philip," the "M. Duret," the "Symphony in White, No. iii.," the upright 'Valparaiso," the smaller "Blue and Silver" of Battersea Bridge, and several other

of the most perfect nocturnes are absent; on the other hand, London did not show, as Paris does, "The Music Room," the "Princesse du Pays de Porcelaine," the "Rosa Corder," the "Little White Girl, Symphony in White, No. ii.," the "Thames in Ice," the "Falling Rocket," that blinded Ruskin and made him forget his manners, and some of the other no less perfect nocturnes. For certain phases of Whistler's art, indeed, the collection at the Beaux-Arts supplements the collection at the New Gallery, as if Whistler had also foreseen exactly what the English memorial exhibition would and would not contain. Mr. Swinburne has not sent over his "Mère Gérard," but from Messrs. Colnaghi comes another though less important study of the same old woman belonging to the same period, and, from Mr. Avery, Whistler's portrait of himself in large hat, and from M. Drouet, his old friend, a small "Head of an Old Man, Smoking," that are further confirmations of how deeply he was influenced by the study of the old masters, and how much at home he must have been in the Louvre, despised by the young Romanticists of a previous generation, and by the young Impressionists of his own. "A Rembrandt," I heard one enthusiast describe the head of the old man. Not quite a Rembrandt, however, but an uncommonly strong and learned piece of work for a student: a little picture that should be preserved in some collection of Whistler's paintings, that it might explain how wholly his later broader methods were based upon sound knowledge and vigorous training, and not, as in Poynter's immortal saying, upon idleness and incapacity.

It is interesting to see, not only the "Piano Picture," which was in London, but, with it, "The Music Room," which was not there—that amazing study of detail a Pre-Raphaelite might have envied, rendered with a delicacy, a feeling for harmony and tone, that not the most accomplished Pre-Raphaelite, in his most accomplished moment, ever equalled. I know of nothing among the Dutch masters as perfect in tone as this interior. I know of nothing anywhere as lovely as the painting of the curtain, with its gay pattern reflected in the mirror, nothing as subtle as the way the difference between the curtain itself and its reflection is suggested. It is a well-known picture of Whistler's, and may seem to call for no further description, so often has it been described; but to see it again is to wonder again at its beauty, at the ease and speed with which Whistler, the student, developed into Whistler, the master. How these early pictures, when they were painted, failed to be recognized as the masterpieces they are, it is to us to-day almost impossible to understand.

The regret in London was that there should be so little of what has been called his Japanese period—the period, rather, when his immense interest in, and appreciation of, Japanese art made itself felt in his selection of subjects and even in his design and color scheme. The regret in my own case was not so poignant, for this is the period which appeals to me personally, perhaps, the least keenly; and if any one had to be sacrificed, this is the period I would part with first. It has its very great importance, however, both because of its influence on Whistler himself, and because he then displayed certain qualities which, as he never tried for them in a later stage of development, people who talk a great deal about his work without knowing it have persistently refused to give him credit for. They will have a new idea of his scope and his powers if they go now to the Beaux-Arts, where they will find "Rose and Silver," "La Princesse du Pays de Porcelaine," the picture that at last is to be restored to the framing he designed for it when he decorated the Peacock Room; the "Caprice in Purple and Gold—the Gold Screen," with its vivid, sonorous color and minutely carried-out scheme of decoration; the "Variations in Flesh Color and Green—the Balcony," even stronger in color, even more deliberately decorative in pattern. Of other periods and other methods, Paris may show much, but they were equally well, if not better, represented in London.

Of the great portraits, the "Mother" is here, and also "The White Girl," the "Sarasate," the "Rosa Corder," the two "Miss Alexanders." But in important portraits the London collection was richer. There is, besides, the "Master Smith of Lyme Regis," but hung in a corner where it might be easily passed over. And there are "L'Andalouse," the fine full-length already seen at the Paris Exhibition of 1900; a portrait of Mrs. Whistler, "Harmony in Red-Lamplight," of which I should not venture to speak until I had seen it in a better light; the portrait of the artist himself, the half-length belonging to Mr. George Vanderbilt; and the portrait of Mr. Vanderbilt, which must come as a disappointment to those who remember it in a previous stage while it was still in the studio. The catalogue explains that it is the last of Whistler's large, full-length portraits, a fact which accounts for its having unfortunately been left so far from finished. Another of the portraits painted during his last years and left in the same unfinished condition is the "Miss Kinsella," which was in London, and is, in every way, in its equally unfinished state, a far more beautiful example of his later period. The pity is that there could not be one collection somewhere to show the whole series of his great portraits. As it is, the two of Lady Meux and the "Yellow Buskin" have had no place either in London or in Paris.

With the nocturnes, it is as with the portraits: if many beautiful ones are omitted, many as lovely are hung. The "Crépuscule—Valparaiso" has been lent to Paris, as it was to London, and none in the entire series can surpass it. The wonderful sky, with its rifts of pale, luminous clouds, the arrangement of the boats, so decorative and yet, you feel, so true; the harmony throughout, the perfect tone and unity, make it, like "The Music Room," a picture to which you return again and again with renewed wonder and delight. Some of the marines, painted afterwards and now hanging near it, seem by comparison as flat and empty as a picture by Whistler could seem—though, no sooner have I written this than I ask myself if it is not a statement calling for qualification, and if the fault—noted always in pictures I had not seen before—does not lie with the light and the background. However that may be, the light, as it falls from the high windows on one side only of the gallery, cannot destroy the poetry and charm of the exquisite "Nocturne, Battersea," belonging to Mr. Vanderbilt—out of the clear night the London barges emerging, shadowy and unsubstantial, in a long row moored to the near shore, their tall masts, with sails furled, forming one succession of graceful lines in the foreground, and yielding to the mere magic of light all the pictorial poetry of a repeated pattern; or the "Nocturne—Blue and Silver—Battersea Reach," belonging to Mr. Freer—a night of mists and mystery, ghostlike sails, one far beyond the other, lights like stars burning in the distance. In both these cases I have named the owners of the pictures, for the simple reason that, by the titles Whistler gave to his paintings, they are at times not to be identified with any certainty. He had a way of repeating the same titles, to the endless confusion of the cataloguer, who, if he does not trace them now, will have eventually to face a task to which the cataloguing of the Primitives will be child's play. I doubt if any one as yet is quite sure of the number of the harmonies in Blue and Silver, of the number of Nocturnes at Battersea, for instance. But the catalogue prepared by the International Society for the London exhibition, and now the Paris catalogue made under the supervision of M. Bénédite, have helped to smooth the way for the student and collector of the future. Many examples of the work of Whistler's later years come from the executor of his estate, and, as might be expected, a no small proportion of these is among the unfinished things—the things he was at work on, or had on hand, when he died. One, probably the last of all, begun a very short time before his death, "Dorothy Seton: A Daughter of Eve," the bust of a girl, with glorious hair, who holds an apple in her hand, is enough to prove, even to his enemies, how little age and illness had weakened his powers, how much was lost to the world by his death.

To turn to the prints is to find that in this section there is no comparison possible between the London and Paris exhibitions, so much more complete was the series in London. The lithographs have an alcove to themselves in the great hall above. The series is incomplete, like that of the etchings. The different periods are well represented. There are examples of Whistler's work in line, in wash, and in color. But the omissions are numerous. There are numerous pastels—eloquent little impressions of Venice, the little Tanagra-like draped nudes, on brown paper—notes and little more, for Whistler believed in respecting the limitations of his medium, and never attempted to rival the effects of oil and water-color with pastel. There are numerous water-colors—portraits, little seas (and no one could suggest as he did all the feeling and spaciousness of the sea in a few simple washes), dainty little interiors, the little shops he never wearied of; these, too, restrained in size, water-color for him, no less than pastel, carrying with it its obligations. And there are drawings, in pencil, in sepia, in chalk; among them an amusing sketch of peasants dating back to those early days when, as a gay student from the Quartier, he journeyed down the

Rhine; sketches by the way from one of the last sad voyages of all, when, old and broken in health, he went to Corsica; and, as links between these two periods, so remote from each other, notes and memoranda mostly for his pictures. They are all of interest for so many reasons that, once more before them, I found myself regretting the want of space and the poor lighting at the Beaux-Arts.

The catalogue follows the model which Whistler adopted, or rather invented, and adhered to so faithfully himself. For it, M. Bénédite, Conservateur of the Luxembourg, has written a short introduction, stating briefly the main facts, events, and dates in Whistler's life. The pictures are catalogued chronologically to a certain extent, the portraits together, and then the nocturnes. They are carefully described, their measurements stated, the names of their owners mentioned, the dates or approximate dates sometimes given, sometimes not. It is no easy task to settle the dates of Whistler's pictures in most cases, and it may be that the compilers of the International Catalogue, so severely criticised in certain quarters for their disregard of dates, will, in the fine illustrated edition, be the first to undertake it. In cataloguing the prints, there has been no chance or necessity to do anything save supply the approved references, but no more efficient guide could be provided for the collector and compiler of the future.

Whether still another Whistler show will be held in Berlin, as rumor says, or elsewhere, I am not sure. N. N.

CLASSICAL STUDIES IN ROME.—I.

ROME, April 30, 1905.

The last ten or fifteen years have seen in the United States a decided though gradual change in the graduate study of the classical languages. Before that time no advanced course in Greek and Latin was considered complete without at least a year spent at a German university, and many Americans went to Germany to become candidates for the degree of Doctor of Philosophy, immediately after graduation. Although this has not been a matter of actual necessity since the foundation of the Johns Hopkins University, it is needless to say that the adequate equipment of American institutions for graduate training and research has been accomplished only within comparatively recent years. These abovementioned students often went to Greece or to Italy on vacation tours, but they rarely made any systematic attempt to become acquainted with the countries where the languages and civilizations which they were studying lived and flourished.

The changes to which I referred above have been two in number. In the first place, Americans are becoming more and more inclined to work for their doctor's degree in an American university, though they usually make an endeavor, either before or after attaining the second degree, to spend a year or more in Europe. One reason is that a few American classical faculties have earned such reputations that they can compete successfully with those of Europe, both in efficiency of instruction and in opportunities for research. On the other hand, it must be admitted that practical considerations have also been taken into account. No American university has attracted graduates in considerable numbers without offering stipends for study in residence, and in most cases the number of students does not greatly exceed that of the stipends. But another reason, fully as important, is that the holder of an American degree has usually a much better chance of securing a desirable position as teacher than his fellow trained abroad. Prominent members of American faculties have naturally a paramount influence in filling vacant posts, and just as naturally they usually exert this influence for the benefit of their own men.

I shall return later to the question wheer this new habit of staying at home be of advantage to American education. Here I may merely point out in passing that, inasmuch as American graduate courses leading to the doctorate in philosophy are a close imitation of the German plan, with its theses and oral examinations, it is not likely that a new spirit has been introduced directly into graduate, or indirectly into undergraduate, studies by the aforesaid change. It would be out of place to discuss the merits of the German scheme of higher education. Still, it is not antecedently probable that the system of one peculiar people, resulting from a long course of development and from particular racial and historical conditions, should be an entirely good thing for a nationality of different character, institutions, and environment. My more immediate concern is with the second of the above changes in the conditions of American classical study; namely, that it is now considered more essential for the student to pass the time of his European residence in Greece and Italy than in Germany. I proceed, therefore, to give an account of the opportunities offered in Rome for the training of classical scholars.

The most important schools now maintained by foreign Governments are the German, French, British, and American. Other nations support similar institutions; and even the South American countries, which North Americans are too apt to regard as backward in educational matters, are not without their representation. But these four being the only ones with which the student from the United States is likely to become acquainted, I shall restrict myself to them, except that the excellent facilities offered by the University of Rome deserve an important place in such a review. As is likely to be the case in modern foundations for education and research, the German School in Rome is the oldest and most completely organized. The institution, known as Das Archaeologische Institut, was founded in 1829 by the Crown Prince Frederick of Prussia, afterwards Frederick William IV. Though this is a hard thing to realize now, it was at first, in its spirit and object, so entirely apart from the trend of the classical scholarship of that epoch that it obtained no recognition whatever from the Akademie der Wissenschaften at Berlin. To be sure, after its founder came to the throne of Prussia in 1840 as Frederick William IV., it did not fail to receive his wise and liberal patronage; but it remained a private enterprise until immediately after the Franco-Prussian war. In fact, the order of the King of Prussia which made the institute a part of the Academy, was dated from Versailles, March 2, 1871. In 1874 it was changed into an Institute of the German Empire, and a branch of it was established at Athens.

The present statutes of the School date from 1874. They call for four secretaries, two for the Roman Institute and two for the Athenian, who are nominated by and responsible to a body known as the Central Direction in Berlin, whose members, serving as officers of the Empire, are scholars of special knowledge in the province of classical archæology. The secretaries are professors as well as officers of administration, the two posts in the Roman School now being filled by those eminent archæologists, Professors Petersen and Hülsen. During the months from November to April they are expected to provide for public lectures, not necessarily by themselves, every other week. They personally give regular courses of lectures in the presence of the monuments and in the museums for the benefit of German students sojourning in Rome. The results of their own research and that of their students are published, if not in books, either in the *Jahrbuch des Archaeologischen Instituts* or in the *Mittheilungen des Römischen Instituts*. There is a special clause in the statutes which provides that the privileges of the Institute shall be as far as possible opened to the public.

The programme of the present year may serve as an example of the work that is regularly done. The First Secretary, Professor Petersen, is lecturing on Greco-Roman art. The Second Secretary, Professor Hülsen, delivered before Christmas about fifteen lectures on the topography and history of Ancient Rome, a course to which students from the American School are always admitted by a special arrangement. Professor Mau, also attached to the Institute, will lecture as usual on Pompeii, in the presence of the ruins, to the American School in May, and to German students in July. This latter course is for the special benefit of German classical teachers who wish to devote their summer months to study. Of the students in regular attendance during the academic year, four, who must have attained the doctor's degree at a German university or passed the State examination for teachers, receive stipends from the Government. There is also an annual scholarship in Christian archæology.

To the carefully systematized German Institute, the French School furnishes an instructive and characteristic contrast. It is not a regularly organized institution in itself, nor is it a part of one. It has no officers except Monsignor Duchesne, the director. But, at the same time, it is unquestionably one of the most profitable schools in Rome. It occupies beautiful apartments in the top story of the famous Farnese Palace, now the property of the French Government and the residence of the French Embassy. Its library is large and well selected. Six students come to it every year on liberal stipends, having received previously a thorough training either at the École Normale Supérieure, the École des Hautes-Études, or the École des Chartes. They are recommended by the heads of these institutions to the Minister of Public Instruction, in whom resides the nominating power. They are assumed to be competent to conduct researches in some branch of study connected with the literature, archæology, or history of Rome or Italy,

it matters not at what period. In fact, although the regulations of the British School are equally liberal, the studies of the French School are less than any other restricted to ancient times. A glance at any volumes of the *Mélanges d'Archéologie et d'Histoire*, their official publication, is enough to show the exceptionally wide range which they cover.

The British School is of all the most recent foundation, having been formally opened in April, 1901, but has already taken high rank on account of the excellence of the work done by its officers and students. Especially may be mentioned the archæological researches of Mr. Rushforth, formerly its director, into the history of the church known as Santa Maria Antiqua, and those of Mr. Ashby, formerly a student, and now vice-director, into the history and topography of the Campagna. The plan of this institution is admirable in its scope and comprehensiveness. The first of its statutes provides that "the School shall be, in the most comprehensive sense, a School of Roman and Italian Studies. It shall promote the study of Roman and of Greek and Greco-Roman archæology in all its departments, including palæography. Every period of the language and literature, antiquities, art, and history of Rome and Italy shall be considered as coming within the province of the School." It is stated, moreover, that "the School shall be also a centre at which information can be obtained and books consulted by British travellers pursuing serious objects in Italy." At present the director and vice-director, Messrs. Stuart-Jones and Ashby, devote themselves to advising their students, and to their own researches; but it is hoped that provisions will shortly be made for regular courses of lectures. The British School still remains a private foundation, although its sister college at Athens has received a Government grant. Its official publication is entitled "Papers of the British School at Rome."

The American School of Classical Studies in Rome was founded in 1895 by the Archæological Institute of America, which already had under its direction the American School at Athens. It is supported by private endowment, and also by contributions from twenty-two American colleges and universities, whose accredited students are in consequence allowed its privileges free of charge. Three fellowships, usually awarded by competitive examination, have been provided for, two for classical studies and one for Christian archæology. Mr. Richard Norton has been director since 1899, and is assisted by an annual professor of the Latin language and literature sent every year by one of the contributing colleges. In addition to these, Mr. H. F. De Cou has been in permanent residence for some years as secretary and instructor in Greek archæology. Courses of lectures are given on Topography, Greek and Roman Sculpture, Greek and Roman Epigraphy, and Classical Archæology, and also on other subjects chosen by the annual professors. The *American Journal of Archæology* is open to the officers and students for the publication of their research.*

I allow this institution to speak for itself as to its scope and object. Number 1 of its statutes reads as follows:

"The School shall be called The American School of Classical Studies in Rome. Its object shall be to promote the study of Classical Literature in its bearing upon antiquities and history; of Classical, Etruscan, and Italic Art and Archæology, including Topography, Palæography, and Epigraphy; and of the art and archæology of the early Christian, the Mediæval, and the Renaissance periods within the boundaries of Italy. It shall furnish regular instruction and guidance in some or all of these subjects, shall encourage and assist in original research and exploration, and shall coöperate as far as practicable with the Archæological Institute of America, and with the American School of Classical Studies at Athens, with which it is affiliated."

In accordance with the provisions of this last clause, all students who choose to go are taken by one of the officers on a six-weeks' tour in Greece, some time during the months of March and April.

Not many foreign students resort to the University of Rome, because, doubtless, the Italian language is little taught in the schools of foreign nations. The stranger, therefore, coming to Rome and finding a school where his own language is spoken is not likely to go much outside of it. But a few months' diligent study of Italian will enable the student to hear lectures in that language; and the opportunities offered by the University of Rome are rich, and its statutes liberal. One of its departments is the Scuola Italiana di Archeologia, the list of whose faculty includes the eminent names of Professors Pigorini for palæo-ethnology, Lanciani for Roman topography, Beloch for ancient history, Loewey for archæology, and Halbherr for Greek epigraphy. Professors Ceci for Italic epigraphy, Vaglieri for Roman epigraphy, and Festa for Greek epigraphy, are also attached to the department. Students, whether native or foreign, who are candidates for degrees or diplomas of any kind, must pay moderate fees and take examinations. But those who wish to hear lectures in a merely informal way are quite at liberty to do so, and do not even have to go through the form of asking permission.

So much for the equipment of the various institutions. But any description of them would be incomplete which should fail to mention the liberal and friendly spirit that prevails among them all, towards the public and towards each other. Interchange of courtesies among faculties and students are constant, and public lectures given at one school are sure of attentive and appreciative listeners from the others. The Italian Government gives to the teachers and pupils of each School *permessi* of free admission to all its museums, and its libraries are also easily accessible to scholars. While the Vatican museums and library are necessarily more jealously guarded, no person who can show that he has good use to make of them is ever turned away. The libraries of the various Schools are of course not open to the public, but qualified persons have no difficulty in obtaining admission to them. Especially is the management of the library of the German Institute to be commended in this respect. I have heard scholars of many nationalities speak in the most grateful terms of the liberal administration of this great collection, and of the helpful kindness of Professor Hülsen and the other learned gentlemen in charge of it. Likewise a student even in the Schools where regular courses of lectures are given, is not expected to attend them if they do not follow the subjects in which he is working. In this case he has no difficulty in securing the assistance of almost any professional scholar in Rome whose counsel he may need. Monsignor Duchesne, the accomplished director of the French School, has told me that, if one of his men needs special guidance, he has no hesitation in sending him to whatever specialist he considers most competent to give it him. But Roman scholars, so far as I know them, never force their erudition on their students. Rather they follow the wise precept of Horace:

"Si quid novisti rectius istis,
Candidus imperti; si non, his utere mecum."

H. EDMISTON.

*The liberal provision recently made by the Carnegie Institute of a fund for the establishment of two research fellowships in the American School at Rome, and for an annual publication, was mentioned in the *Nation* for January 12, 1905.

Correspondence.

ARCHÆOLOGY IN JAVA.

TO THE EDITOR OF THE NATION:

SIR: The *Nation*, conscientiously keeping in touch with the latest discoveries in archæology and the history of art, architectural, sculptural, etc., I take the liberty of drawing your attention to some doings in a field of which very little seems to be known here. I refer to the new finds made in the island of Java, and the immediate cause of my writing you is a letter received this morning from a friend who resides not far from the Bôrôboedoer (Bara-Budur), that magnificent relic of a civilization gone by. He says:

"The bridge you have crossed so many times between Mendoet and Bôrôboedoer has been washed away, and, for several years to come, visitors to the finest building of old-time Java will have to use a bamboo ferry to reach the other side. . . . Of great importance, for science and art both, is the discovery, not far from the bridge that was, of three beautiful Sivaitic statues, life-size. Remains of the classical Hindu-time, they must have been imbedded in the earth some thousand years, and the remarkable feature of this new find is that, as already mentioned, the sculpture is Sivaitic, while the Bôrôboedoer, so near by, is one of the highest architectural expressions of the Mahayanistic idea in Buddhism."

In this connection, it may be remarked that the purely doctrinal significance of the Bôrôboedoer as a work of religion, apart from its artistic merits, is still a matter of controversy, and the King of Siam, when he visited Java the last time, only added to the confusion by pronouncing in favor of a South-Buddhistic origin. Similar discrepancies, moreover, may be observed between other ruins in close proximity, *e. g.*, those of Prambanan and Tjandi Sewoe, near Jogjakarta.

I shall not expatiate on this topic, fruitful of interminable dispute. I merely wish to point to the fact, pleasant to record amid so much that goes awry in Netherlands India, that the commission appointed for archæological purposes under the efficient leadership of Dr. J. Brandes is doing good and faithful work. Indeed, it was high time, not only that new researches should be made and something should be done to prevent our old Hindu monuments from going to complete ruin, but that theft and acts of the most wanton vandalism should be stopped. It is, for instance, not many years since,

after the visit of a distinguished personage to the Bôrôboedoer, eight carloads of statuary were carried off, a most beautifully sculptured lion and the image of the "builder," so-called, perhaps a *rakshasa*, among the rest; while of the more than hundred life-size Buddhas in the dagobas, only two or three managed to keep their heads on their shoulders. Government has been exceedingly careless in its charge of the treasures of Hindu art in Java, temples and other structures, illustrating a period of the island's history which else has hardly left any trace. Of the many temples mentioned by Junghuhn as existing on the Dieng plateau half a century ago, not more than seven are standing now, provided they have not been pulled down to get at the stones for building purposes since I revisited that locality of many wonders in 1902. The example of easy-going Rome, where, as we know, interesting old historical sites proved such excellent quarries for building-material in constructing new, uninteresting, cheap, "stylish" flimsinesses, finds followers in plenty. The Dutch Government itself is guilty in that respect. Less than twenty years ago, when the foundations were laid for the bridge over the Progo which showed itself no match for the weather of this rainy monsoon, I saw richly carved temple-stones sunk into the river for that purpose, with the sanction of the Government officials who superintended the work.

The Archæological Commission,* no doubt, will protest against the maxim of "Art is no business of Government" being stretched to that extent in the future. Meanwhile, the Commission goes on, within the limits of a rather scanty appropriation, restoring what threatens to crumble away, and digging for treasures still hidden. It has taken the Tjandi Toempang in hand in the eastern part of the island; it has relieved the Tjandi Paon from the picturesque but harmful embrace of a gigantic tree, which held it enlaced with such loving force that the temple was on the point of falling down disjointed, in a dead swoon; it has restored, as far as possible, the Tjandi Mendoet, with its colossal statues of the Buddha; a marvel of art, a perfect gem of architecture. And here I have to repeat the accepted theory that the Tjandi Mendoet was never finished, like, indeed, according to the latest opinion, the Tjandi Bôrôboedoer itself. Legendary lore speaks of an invading army beleaguering the holy place, and the garrison spoiling the builders' work by hurling down piecemeal its heavy ornaments upon the enemy, saving, luckily, the exquisite reliefs which illustrate Buddha's life along the upward path of the pilgrim. However this may be, the Bôrôboedoer and the Mendoet, with other temples in that neighborhood, before their completion, were most probably covered with sand and mud and ashes, in consequence of one of those terrible volcanic eruptions which Java experiences from time to time. The fact that the principal as well as the secondary Tjandi buildings, before their rediscovery, were nothing but mounds, overgrown with shrubs and trees, like the Prambanan temples more to the south, may be accounted for in this way; and in this way also they were preserved till, exposed again to the influences in turn of a tropical sun and tropical rains, they must meet their fate, perhaps rather soon if no more effective measures are taken. It is a pity to think that the ridiculously small sum of money grudgingly set apart for their maintenance hardly suffices to keep the buildings clean, and to provide for a little restoration work, distributed over a number of years, as in the case of the Mendoet, it being quite out of the question to undertake what is needed in the case of the Bôrôboedoer, one of the finest specimens of Hindu architecture in existence.

Excavations have been made near the Tjandi Mendoet with the gratifying result that another temple, at least the ruins of another temple, came to light, on the same foundation, and once, probably, in the same enclosure. There are indications of still more temples, but the search for them implies the removing of a kampong (a little village) situated several metres higher than the Tjandi base levels, in fact, on the surface of the layer of sand, mud and volcanic ashes which support the volcanic eruption theory.

Thus far, and specially taking into account their limited pecuniary means, the result of the work of the Archæological Commission may be called very encouraging, certainly enough so to warrant much more extended and sustained labor in the same field, which promises large returns. Nor should I forget, when speaking of the tardy and hesitating Governmental action, to mention what has been done on private initiative in the neighborhood of Jogjakarta. The archæological society of that place, with its leading members, Dr. Groneman and Mr. Raaff, may be proud of their exertions in unearthing the temples of Prambanan. More work is waiting at the Tjandi Sewoe, the Thousand Temples, and many, many other places of historic and artistic interest in Java. The most interesting of all, *facile princeps*, is the Bôrôboedoer, rising from the fertile plain of the Kadoe, the garden of Java, to the clear, blue sky as a prayer in living stone, tender, passionate, sublime. . . .

The traveller, visiting the Mendoet on his way thither, will do well to make the acquaintance of the Roman Catholic missionary Hoevenaars, from whom the key to the building may be had—a scholar, learned in the antiquities of Java, who knows, as few others, the later and also the earlier history of the great and beautiful temples among which he spends his life, doing for the natives what his hand finds to do as an instructor, a physician, a friend in need. And when the traveller crosses the Progo on the bamboo ferry (for it will take years before a new bridge is built—things move slowly in Netherlands India, if they move at all), he can compare the old Java with the new. Though the structures of men, like men themselves, seem to be dependent on the special stars under which they were born, their fate, withal, shows the worth of their builders: the Hindu Tjandis defy the ages, notwithstanding utter neglect, but the bridges of the Dutch Government tumble down every few years, whenever a freshet comes frolicking along. It is to be hoped that the next Progo bridge, with a few temple stones less for its foundation, will hold out a little longer. Perhaps it was the sacrilege that undid the last one; perhaps a combination of other causes which make the Department of Public Works a byword and a shaking of the head among the people. . . . J. F. SCHELTEMA.

NEW HAVEN, CONN., June 6, 1905.

*The real title of this commission is seven yards two feet and several inches long, Dutch fashion, but the shorter one will do just as well.

BUDDHISM AND THE MONGOLS.

TO THE EDITOR OF THE NATION:

SIR: In the note on the remarks of Sir Henry Howorth after the reading of Sir Frank Younghusband's paper at the meeting of the Royal Geographical Society on the Tibet mission, your reviewer, perhaps from the necessity of brevity, leaves a wrong impression of the effects of Buddhism on the Mongols as stated by Sir Henry. Speaking of the large numbers of them who have become inmates of monasteries, he goes on to say:

"They have become celibates, they have given up their old military life and their rapacious habits; and whatever else has been done by these lamas of Tibet, they have succeeded in converting the most extraordinarily aggressive race that the world has probably ever seen into one of the most peaceful and the most quiet. Here from the Volga, where you have the Kalmucks at this moment, it is not far to go."

Now unless it is to be counted to a race and a religion, under the new dispensation of the strenuous life, a reproach to have introduced a profound state of peace where before violence reigned unchecked, the testimony of Sir Henry Howorth was evidently intended, so far as it went, as a good word for even "the extremely corrupt form of Buddhism," as he characterizes it, of the lamas of Tibet, and not a fling at it.

E. H. CLEMENT.

BROOKLINE, MASS., June 11, 1905.

CASTE AND TRADES-UNIONISM.

TO THE EDITOR OF THE NATION:

SIR: Caste is the greatest obstacle to progress in India, and how to break its iron rule over the people is the all-absorbing problem of those who have the Indians' welfare at heart. A recent writer illustrates this power by a reference to the difficulties of earning his daily bread which it puts in the way of a brass-worker who has become a Christian:

"All the springs of the trade, all the wealth and standing of it are against him. The mighty power of the members of the craft, down to the smallest child, grinds him hard through every relation of life. There is but one will and purpose through the hundreds of thousands of his people. His touch is defilement, his presence a curse. He is an abomination."

Can any words state more truthfully the attitude of the labor unions towards the non-union man? And are they not, under their present leaders, distinctly and emphatically anti-Christian? J. M. H.

BOSTON, July 12, 1905.

[We so believe. With their "unfair," "foul," and "scab," their labels even upon food, they have revived *tabu* in all its hatefulness.—ED. NATION.]

THE MEMORY OF WORDS.

TO THE EDITOR OF THE NATION:

SIR: The article—full of interest—on "The Lexicon of Youth" (*Nation*, May 11, p. 369)

brings to my mind the remembrance of some interesting attempts to estimate the numerical extent of personal vocabularies. How many words can a man remember? That is to say, how many convey a distinct and accurate meaning without the necessity of referring to the dictionary for an explanation? Prof. E. S. Holden devised an ingenious method of testing the extent of his own vocabulary by means of Webster's Dictionary. The result was that he knew the meaning of 33,500 English words. On reading his paper in the "Bulletin" of the Washington Philosophical Society (vol. ii., appendix, p. ii.), I decided to make the experiment, and induced a friend to do the same. I found my available English words amounted to 35,250, and my friend's to 37,000. This was communicated to the Manchester Literary and Philosophical Society (Proceedings, vol. xxi., p. 11).

The vast and varied literature contained in the Bible is recorded with only 7,209 words. A Milton concordance shows 17,377, and a Shakspere concordance 24,000 words. Inevitably, the increasing knowledge and varied interests of the present age will tend to the enlargement of the personal vocabulary. Most persons engaged in literary or scientific pursuits, and many who are not, are familiar with some other languages in addition to their mother tongue. If such a man remembers 30,000 English words, what will be the extent of his Latin, French, and German vocabulary? When we consider the cases of men like Mezzofanti or Thomas Watts, the number of words that can be known and remembered assumes almost incredible proportions. There is a tendency, no doubt, to exaggerate the linguistic prowess of these sons of Mithridates, but it seems tolerably certain that Mezzofanti could write, read, and speak in fifty languages. How many thousands of words there must have been stored away in his receptive brain-cells ready to obey the call whenever it should be made!

WILLIAM E. A. AXON.

GREENHEYS, MANCHESTER, ENGLAND,
May 25, 1905.

Notes.

Francis Quarles's 'Sions Sonnets,' in paraphrase of the Song of Solomon, has supplied the latest number in the Riverside Press choice reprints; a light little volume for the hand, archaically composed, and combining the excellences of the editions of 1625 and 1680, the latter being followed in the main. The vermilion binding is tastefully simple and appropriate.

Thomas Benfield Harbottle's 'Dictionary of Battles' in all ages (Dutton) is so far up to date as to include the sea-assault on the defences of Port Arthur, but neither of the two great land battles, nor the final reduction of the fortress. It is a handy compendium, but must be used with caution. Too many details are given to ensure freedom from error, *e. g.*, as in the numbers engaged and the losses in the principal engagements of our civil war. It would not be fair to judge the work by the article on Gettysburg. "On the 1st [of July, 1863], Meade's position in front of Gettysburg was attacked . . . and the Federals driven in confusion *into the town*. . . . On the 3d, . . . Lee's main attack *succeeded in driving the Federals from the ridge*." The compiler of this work died as it was going to press.

Mr. Ralph Curtis Ringwalt's 'Briefs on Public Questions,' with selected lists of references (Longmans), is sure of favor with the young debating community, but is also well calculated to enlarge the understanding and settle the convictions of journalists and legislators. Its themes are logically ordered under three heads, Politics, Economics, and Sociology, *e. g.*, under the first: Naturalization, Woman Suffrage, Negro Suffrage, Educational Qualification for Suffrage, Restriction of Immigration, Chinese Immigration, etc. The Popular Election of Senators, Retention of the Philippines, Reciprocity with Canada, Postal Savings Banks, Government Ownership of Railways, Single Tax, and Government by Injunction are others of the twenty-five. The statement of the proposition is followed by general references and considerations, then by the respective briefs pro and con, with references. The scheme and the execution are to be commended, and Mr. Ringwalt has had in mind in his bibliography the resources of ordinary public libraries.

It would have been much better if (Mrs.) Izora Chandler and (Miss) Mary W. Montgomery had not given 'Told in the Gardens of Araby' as title to their collection of Turkish *Märchen* (New York: Eaton & Mains). Curiously enough, we have not yet any specifically Arabian collection of popular tales, although we have a few from the border lands of Arabia—Mesopotamia, Mossul, Damascus. Nor need the folklorist look in this volume for anything of the kind. What is here is simply tales of the kind collected by Ignatius Kunos in Anatolia, and published by him in Turkish and Hungarian. Some close parallels, also, will be found in Stumme's gatherings in north Africa, but with Kunos's 'Märchen' it is a case of identity. Of course, that does not mean that the present authors may not have made a quite independent find. It would also have been better if they had not added to their title "untranslated until now." Their very first tale has had an interesting fate, and narrowly missed being included in the earliest of all European forms of the 'Arabian Nights,' the French version of Galland. Between March and June, 1709, Hanna, a Maronite monk of Aleppo, who had been brought to Paris by the traveller Paul Lucas, narrated to Galland divers tales, almost all of which he afterwards incorporated in his 'Mille et une Nuit.' On Thursday, May 23, 1709, Galland outlines in his diary this precise tale as having been so told. But he eventually made no use of it—recognizing, probably, its lack of artistic unity—and it was left for Zotenberg, in 1888, to publish the outline in his epoch-making 'Histoire d'Alâ al-Dîn.' Further, from Kunos's Hungarian version seventeen stories were translated by R. Nisbet Bain and published by him in his 'Turkish Fairy-Tales and Folk-Tales' (London, 1896). Several of these are the same as stories here. In the present volume are nine, told with very varying success.

A significant fruit of the present strange religious situation in France is a little volume, 'Religions et Sociétés' (Paris: Félix Alcan), consisting of seven lectures delivered before the École des Hautes Études Sociales, and now published by the School as number twenty-six in its "Bibliothèque Générale des Sciences Sociales." The preface, by M. Th. Reinach, makes very plain what it means when, under a bureaucratic régime, the Church is suddenly abolished and religious and moral instruction ceases automatically throughout the land. Here the problem would be attacked, with very varying success, by a system of Sunday schools. In France, apparently, any elaborate federation and development of these would be illegal, and the French attitude seems to demand further that the State must undertake the labors of the bodies with which it has made away. So, to replace the theological faculties, a chair of the history of religions has appeared at the Collège de France, and a section of religious history at the École Pratique des Hautes Études. But no provision has yet been made for a similar historical treatment of religion in the provincial universities, not to speak of the middle and elementary schools. An elaborate scheme of that kind is the hope of M. Reinach, though how much religion and moral training can be got from history—even religious—may be very dubious in our eyes. The present lectures are the contribution of the School of Social Studies to the problem, and deal, in consequence, less with dogma and literature than with the relation of religion to the social organism. They treat such matters as progress in religion regarded as a constant accommodation of religion to secular progress; primitive Christianity and the social question; the Amalricans, or brethren of the free spirit, as anarchists; Islam and modern civilization; Babism and its future. All have value, but probably the principal thing in the book for us is its suggestion of the situation which produced it.

Büchmann's famous 'Geflügelte Worte,' the classical German collection of sayings, adages, mottoes and the like, recently appeared in its twenty-second edition, 139,000 copies having been issued since its first publication forty years ago. In 1864, it made its appearance as a little reference book of 220 pages, and has now become a thesaurus of 871 pages. The present editor is Eduard Ippel, who has steadily labored to make this work a collection of scientific value for philological study, and commands the able assistance of such men as Richard M. Meyer, of Berlin.

Mr. Alexis V. Babine of the Library of Congress has issued for private circulation an account of 'The Yudin Library, Krasnoiarsk (Eastern Siberia).' The text is in English and Russian on alternate pages, and interleaved with facsimile reproductions of title-pages, bindings, manuscripts, etc.—altogether a fine piece of book making. The collection described is the private library of Mr. G. V. Yudin, a well-to-do merchant, living in Tarakanovo, a suburb of Krasnoiarsk. Here, far away from the literary centres, in a city but recently connected by railroads with the bookmarts of Russia, he has succeeded in collecting a library of not less than 80,000 volumes and 500,000 pieces of manuscripts. The library is particularly rich in Russian bibliography, history and literature, Siberia being, naturally, particularly well represented. The number of old and rare

books is very large. Complete files of all Russian periodicals devoted to bibliography, and a large number of indexes to Russian magazines and society publications, are to be found in Mr. Yudin's library, as well as the publications of learned societies, especially historical and archæological. One of the most precious volumes is the only known copy of the original edition of Lomonosoff's 'Polydore'; it was used by the Imperial Academy of Sciences for its edition of that poet's collected works. Particular interest is attached to the manuscripts of N. P. Rezanoff, a Russian pioneer in America, which contain many documents relating to Russian settlements on this continent. From Rezanoff's hand is also a "Memorandum for a Future Convention with Japan, if such should take place," undated, but presumably written about 1804. Mr. Yudin is not only an intelligent and scholarly collector of books, he is a bibliographer of note and an enthusiastic supporter of Russian bibliography, witness the three volumes, by S. A. Vengeroff, entitled "Russian Books, 1708-1893," which he published at his own expense, hoping—thus far in vain—that either the Imperial Academy or the Public Library in St. Petersburg would continue the work.

The Society for Book Industry in Stockholm arranged in the Royal Library last December an exhibition of incunabula, of which the catalogue, prepared by Dr. Isak Collijn, lies before us. Not less than 311 incunabula were exhibited, selected from the Royal Library, supplemented chiefly by the University Library of Upsala, and, in lesser degree, by that of Lund, by the libraries in Linköping and Västerås, and by the private library of Baron Per Hierta of Främmestad. The catalogue is arranged geographically and chronologically, according to Proctor's scheme, and begins with fifteen leaves of Gutenberg's 42-line Bible found by Dr. K. H. Karlsson among the archives of Stockholm. Swedish printing during the fifteenth century was represented at the exhibition by 21 of the 27 known incunabula printed within the realm. The larger public libraries of Sweden now possess some 3,300 incunabula, namely, 800 in the Royal Library, 1,500 in the University of Upsala, 200 in Lund, 500 in the cathedral library in Strängnäs, and about 150 in each of those in Linköping and Västerås.

A catalogue of the incunabula in the cathedral library in the last-named city has just been issued, with Dr. Collijn for its compiler. It is an alphabetical author-catalogue, with indexes of printers and subjects, and a very interesting list of previous owners. The majority of incunabula in Swedish libraries originally belonged to libraries sacked by the generals of the Thirty Years' War, and not less than 31 of those in Västerås are shown to have come to it as war prizes, namely, 19 from the libraries in Olmütz, and the rest from Prag, Braunsberg, Hradisch, and Nicholsburg. Of Swedish incunabula this library possesses only one: 'Breviarium Strengnense,' printed by Johann Fabri in Stockholm, in 1495. The oldest book in the collection is a volume of seven tracts by St. Augustine, St. Chrysostom, and Gerson, printed by Ulrich Zell in Cologne, about 1467.

The circular announcing the intention of the New York Library Club to publish a union list of periodicals in the libraries of Greater New York says truly that, "in this city of enormous distances and many special libraries, such a list is the only method of making available for students and inquirers the riches that should be and would be of inestimable service to them." The work of compiling the list will be done by the various libraries under the supervision of an editorial committee, consisting of Miss Isabel E. Lord, librarian of Pratt Institute, Mr. Henry W. Kent, assistant secretary of the Metropolitan Museum, formerly librarian of the Grolier Club, and Mr. Frank Weitenkampf of the New York Public Library. But the work will not be undertaken unless the cost of printing an edition of at least 500 copies is covered by subscription. It is calculated that the list will contain some 12,000 titles in a volume of about 300 pages, "following the general make-up of the Chicago List of Serials." Newspapers, directories, and serials of a purely administrative character will be omitted, as well as transactions and proceedings of societies, medical and pharmaceutical periodicals, and Hebrew and Slavic periodicals.

Without apparent stoppage, save in those public works most easily postponed, the civil Government enterprises in Japan go forward, despite war. Promptly the 'Résumé Statistique de l'Empire du Japon' (pp. 163) appears, along with the atlas-like 'Mouvement de la Population' for 1901 (pp. 357), both with the imprint of the Bureau of Statistics of the Imperial Cabinet. The former gives results of the enumeration of 1903, showing 46,732,841 in Japan proper, 3,000,111 in Formosa, making in 1905 at least fifty millions of souls. Of foreigners resident there were 13,848; of Ainu (or the aboriginal white race) in Yezo there were 17,783; and of Formosan inhabitants, 37,077 were Japanese, and the remainder Chinese or the copper-colored aborigines. In an official publication, the Japanese still use the opprobrious term Aino, which suggests canine origin, instead of the true native word Ainu, which means men. On the penultimate page is a graphic representation of births and deaths in Japan proper from 1873 to 1901, showing a very irregular line of deaths between the 600,000 and 940,000 mark, and a constantly ascending line of births, with but few variations, between the 800,000 and the 1,500,000 mark. Improvement in morals, or at least marital relations, through improved legislation, is seen in the statistics of divorces, the reduction being nearly one-half; the average from 1899 to 1902, inclusive, being 64,841; that from 1895 to 1899, inclusive, being 112,508. The data concerning posts, telegraphs, and telephones, newly arranged, witness great expansion in every part of the empire. On vital statistics, finance, wages, in detail and in gross, the tables show improvement in clearness over previous editions, making a most creditable volume.

The conspectus of Japanese social life given in the 'Mouvement de la Population de l'Empire du Japon' for 1901 is interesting to the student of public hygiene and law, because of the minute detail of births, marriages, divorce, disease, foundlings, etc., recorded in every province. The peculiar customs of adoption, which require so much space in the new codes in treatment of the many cases arising in practice, make the subject complex, yet decidedly interesting to those who realize the composition of a Japanese family. Communal in idea, origin, and procedure, the family in Japan is less an organism held together by blood ties than a legal entity. Many of the so-called "divorces" are, in the light of Occidental ideas and habits, nothing more than the breaking of engagements, and not rupture of the marriage tie; as, for example, when a boy, babe, or youth, adopted to marry the house-head's daughter and take his name, fails to become a husband, the law of Japan registers this failure as a divorce. In the very minute tables of decease by disease, the place, sex, cause, and age are given, with recapitulations. Only 260 persons were declared and registered as foundlings, in 1901; 91 being babes under twelve months. Of persons naturalized in 1901 there were 27. Of lepers, 2,021 died in 1901; of syphilitics, 9,198; of plague patients, 3; of cholera patients, 484. The most disabling disease, affecting the nerves and circulation (from 70 to 84 per cent. of Oyama's army, according to Miss McGee) is *kakké*, or beri-beri; but the tables show it to be one of the least fatal.

In the latest (66th and 67th) issues of Medical Reports of the Chinese Imperial Maritime Customs, two observers throw light on the supposed connection between mosquitoes and malaria. Thus, at Chungking, fever prevails most in the early spring, when there are no mosquitoes to be seen. The town is normally, also, so free from the insect that in many places the net is not required. When the streets are flushed by early rain, there is very little fever. At the Haihow harbor light-station, malaria of a quotidian type is serious. No places were found where mosquito larvæ were breeding or could breed, but Anopheles were plentiful in European and native quarters. Larvæ were numerously found in rice fields a quarter of a mile distant, obviously carried thither by the prevailing winds. "The officer in charge [of the station] made nightly war on those mosquitoes found within doors, and, whether due to this crusade or not, the members of the light staff have ceased developing the malarial paroxysms."

The Parents' National Educational Union held its ninth annual conference in London in May. Among the subjects discussed was the allowance of sleep necessary for boys in the first two or three years of their school life. Dr. T. Dyke Acland said that the result of inquiries which embraced forty of the great English schools and four of the best American, was that from nine to ten hours' sleep was needed by young growing boys, but that only two of the English schools with which he corresponded came up to the highest standard, while all four of the American reached it. In a paper on "Home and School," Dr. Burge, headmaster of Winchester, made a remark which has some bearing on a recent regrettable occurrence in one of our leading institutions of learning. He said that experience convinced him more and more that most of the foolishness associated with the life of boys at school and university was due to the fact that there was one standard of life for home and another for school and college. He welcomed anything that linked the life of the boy at school with the life of the boy at home.

Travelling schools for farmers' daughters are in operation in different parts of Germany and are giving great satisfaction. The

subjects taught are housekeeping, cooking, the selection of food, the care of cattle and poultry, the cultivation of vegetables, and butter and cheese making. It is now proposed to enlarge the curriculum by instruction in nursing, preparing food for the sick, sewing, mending, etc. The teachers are graduates of the best schools of housework, who have passed Government examinations. Twenty girls, over sixteen years of age, form a class, and a term lasts six weeks, the tuition being so low as practically to exclude no one. Our own remote (and not so remote) farming communities might profit by such an institution.

A month ago (May 11), in announcing the launching of the Vasari Society for reproducing notable drawings of the Renaissance, we made a slip in the address of the Honorary Secretary, Mr. G. F. Hill. It should have been, 10 Kensington Mansions, London, S. W.

—Ray Morris, editor of the *Railroad Gazette*, discusses, in the June *Atlantic*, the question of rate regulation, admitting the burdensome character of the present situation, but pointing out some of the serious difficulties in the relief measure now chiefly under consideration, the Esch-Townsend bill. In passing this bill almost unanimously, his opinion is that the House allowed itself for the time to be transformed from a deliberative body into a band of giant-killers. "Any Federal enactment that aims to cure radically and automatically all existing transportation ills, is sure to prove a remedy worse than the disease, if it does not fall ridiculously short of accomplishing anything at all." The second instalment of William Garrott Brown's study of the Reconstruction period deals with Secretary Seward's management of the State Department, very favorably on the whole, though material exceptions are made as to the conduct of our relations with Great Britain. Frederick Law Olmsted contributes a paper on "Village Improvement," made up largely of a hitherto unpublished manuscript of his father. The main points insisted upon are unity of purpose and persistence—easy things to talk about, but extremely hard to secure in an average American village.

—Considering both thought and action, Raleigh was the most representative Englishman of the great age in which he lived, nor could the virtues and vices of the period have been summed up more compendiously than they were in his career. For this reason he will always be such a favorite subject with essayists and biographers that we need never feel surprised when a new sketch of his life appears. The latest contribution is 'Sir Walter Raleigh,' a volume in the "English Men of Action" series, by Sir Rennell Rodd (Macmillan). Here full justice is done to the versatility of the man and to his noble qualities, while yet we are made to understand why in the days of the Armada he was more cordially hated than any one of the Queen's followers. In the speech delivered just before his execution, Raleigh said in extenuation of his vanity and other faults that he had lived a sinful life in such callings as were most conducive to it. "For I have been a soldier, a sailor, and a courtier, all of them courses of wickedness and vice; but I trust He will not only cast away my sin, but will receive me into everlasting life." Often enough the baser traits of character come to the surface amid prosperity, misfortune being required to show the presence of shining virtues amid much alloy; but Raleigh's whole career seems a comment upon Matthew Arnold's "Buried Life." Deep down in his nature were noble impulses which gave proof of themselves when the world was not too much with him—as it usually happened to be whenever there was a field for the exercise of his varied talents. With a most complex personality for his subject, Sir Rennell Rodd succeeds in indicating its contrasts without rendering them too sharp. A writer with the temper of Macaulay would have made the worst possible biographer for Raleigh, for where the data supply so much light and shade the artist has to guard carefully against exaggeration. This Sir Rennell Rodd has done, for, without lowering the moral standard, he shows a talent for being a casuist within bounds. For us the most interesting chapter of the book is that entitled "Cecil and Raleigh," wherein will be found an excellent account of close friendship waning to something worse than coolness. In Cecil's negotiations with James VI., prior to Elizabeth's death, Lord Henry Howard took an active part as intermediary, nor had Raleigh a more bitter enemy than this scion of the house of Norfolk. What affection Cecil had ever felt for his former friend seems to have disappeared utterly under the dictates of political expediency, which meant the need of excluding Raleigh and Cobham from the council of the Stuart King. Lady Raleigh could never bring herself to believe that Cecil was not a true friend, though the evidence now available shows him to have been the chief cause of her husband's downfall. Sir Rennell Rodd has a sure grasp of his documents and has used them with much skill.

—Every one who has lived in an English village knows how important in the rural laborer's life are the clubs to which he pays a few pence weekly or monthly. The improvident one who falls behind with his "club money" is a marked man, while to pay it in "regular" covers a multitude of sins. There are, in fact, few men in the village community who will not make the necessary sacrifice of beer in order to belong to the "Goose Club," which provides each member with a goose for his Christmas dinner, and to the "Burying Club," so that his wife (who is always assumed to survive him) may give him a decent funeral. If the question of these clubs has ever been looked into by the economists, it has no doubt been recognized how much they contribute to the comfort of the village home and to the solidarity of village society. But we have never heard of a "Trousseau Club" in England. So far as we know, the young women get married as best they can, and the trousseau, if prepared at all, is prepared in haste. They manage this better in France, as we learn from a recent number of the *Réforme Sociale*. The truth is that the French reformer of to-day has to face a condition which at present causes little real anxiety in any other equally prosperous country. This, we need not say, is the depopulation of his native land. He has learned to look on the child as a rare and precious thing. The scarcity of children among the rich he deplores, but he knows well that the rich are never reformed. The intelligent reformer remembers that in every civilized society of which we know anything, the rich have regarded children as one of those good things of which one may easily have too much, while the moderately rich, if they must deny themselves a luxury, have preferred to forego the luxury of children. So it is that if you take up any of the current literature of social reform in France, you will find that the reformer wastes no time in preaching against race suicide to the real offenders, but devotes his efforts to preserving the lives and health of the numerous children of the poor.

—A healthy child, however, implies a well-ordered home. Now it has been discovered that one of the greatest hindrances to the happiness of married life in the working-class in the towns is the lack of a trousseau for the bride; in fact, without it the home is often not founded at all—the nest is not built, simply because there are no feathers. Without the proper outfit of household and personal linen the *fiancée* of the French artisan refuses to face the task of bringing up a family. To meet this need there was founded some years ago the "Œuvre du Trousseau." This is a society which induces young girls of the age of nine to begin to make and to store up the trousseau which is to be handed over to them at the age of eighteen. At fourteen, if the girl has paid regularly the dues of fifty centimes per month and attended the sewing meetings of the society, she becomes a director of the concern by right of her stake in the business, and at the age of eighteen can withdraw her profits in the shape of a trousseau made by her own hands, or, in any case, wholly hand-made and of excellent material. The trousseau consists of seventy-three pieces of personal and household linen—not a bad feathering for the nest. Who is so likely to keep her linen closet in good order and replenished as she to whom it represents nine years of small economies and countless hours of effort? This is the "Œuvre du Trousseau" carried on now in more than sixty towns of France, not as a charity dependent on the caprice of the philanthropist, but as a regular business concern. The English "Goose Club" and "Blanket Club" and all the other village societies aim at adding to the comfort of the home. But the "Trousseau Club" is enriched by a sentimental interest which they lack, and is due to a desire for daintiness, even in the poorest surroundings, which is usually alien to the instincts of the British working-class.

—Under the title 'Tippu Tip: Lebensbild eines zentralafrikanischen Despoten' (Berlin: W. Baensch; New York: Lemcke & Buechner), Dr. Heinrich Brode publishes an autobiography of Hamidi bin Muhammad, the famous African potentate, who has had relations with many of the European explorers of Africa during the past forty years. In July, 1867, he met Livingstone, who was then on his last journey. Livingstone's brief account of the meeting indicates that the Arab chieftain was very friendly. Tippu Tib (a surname or nickname) relates that he found Livingstone destitute of all means of subsistence, and almost saved the missionary from perishing. He describes the latter as a very old man, and observes that, although his name was Livingstone, he called himself David. This reminds one

of the German who illustrated the difficulties of the English language by pointing out that a name spelled Dickens was pronounced Boz. Tippu Tib's chief interest for Americans and Europeans lies in his long-continued intercourse with Stanley, whom he first encountered in the autumn of 1876, and who described him as a large, active, energetic man, with handsome and intelligent features, well-bred and well-dressed. The portrait prefixed to the present volume, however, shows a typical negro face, although Tippu Tib is almost of pure Arabic descent, the only admixture of negro blood being derived from his grandmother. Like Cameron, Stanley was glad to avail himself of the advice and assistance of so powerful and important an ally. Tippu Tib's account of their negotiations differs widely from Stanley's, and he accuses the explorer of having made him many "lying promises." He states that when they parted, after sailing down the Congo together, Stanley expressed his gratitude in warm words, and said that on his return to Europe he would send him a watch worth $1,000, with diamonds and any amount of money. In 1887, when Stanley was in command of the Emin Pasha relief expedition, he was again desirous of securing the friendship and coöperation of Tippu Tib, and, with the consent of King Leopold of Belgium, appointed him governor of one of the provinces of the Congo State. A little later, Stanley accused him of treachery, and brought suit against him for over $50,000 damages, but this was amicably settled. The German invasion of Africa and the establishment of the Congo Free State had the incidental effect of breaking the Arab supremacy in Africa. Tippu Tib, nearly seventy years old, now lives in Zanzibar, a private citizen, whose wealth is estimated at a quarter of a million dollars, and his advice and opinion are often sought and highly valued by the ruling Powers. His greatest desire is to visit Europe.

THE UNVEILING OF LHASA.

Lhasa and its Mysteries, with a Record of the Expedition of 1903-1904. By L. Austine Waddell, LL.D., C.B., etc. (Lieutenant-Colonel Indian Medical Service). With 200 illustrations and maps. E. P. Dutton & Co. 1905.

For the last half century, Tibet has been that among the unexplored regions of the world which has most excited the curiosity of geographers and students of religion, for though other parts of Central Asia and some parts of Central Africa remained equally little known, they were either deserts or inhabited by savages. In Tibet, however, there existed a sort of civilization, and it was the home of an extremely remarkable form of Buddhism, which had developed an elaborate monastic system and a powerful hierarchy. The English rulers of India had long wished to open up the country to trade, and some of them also wished to establish political influence over it, but the Tibetans, and especially the monastic organization of the Lamas, were resolutely opposed to all intercourse and refused to allow any white man to cross the frontier. Several travellers had from time to time succeeded in entering the country, and a few got within some days' march of Lhasa, the sacred capital. Only one Englishman, however, managed to reach Lhasa, Thomas Manning, who was there in A. D. 1811; and after him no one else except two French Lazarist priests, Huc and Gabet, in 1845. There had for the last twenty years been bickerings between the English and the Tibetans on the frontier of Tibet and of Sikkim, a small Indian protected State on the south slope of the Himalayas, and in 1903 the report of the visit of some Tibetan envoys to the Czar at Petersburg gave the restless and ambitious Viceroy of India the opportunity of inducing the British Government at home to permit him to send a mission into Tibet. The mission was accompanied by a large military force, because resistance was expected. Resistance was in fact offered, and the mission became an armed expedition, which fought its way across the lofty passes to Lhasa, dictated a treaty there, and returned safe into India, having narrowly escaped being cut off by falls of snow upon the passes.

Several books, as our readers know, have already appeared describing this expedition, but Col. Waddell's is the one which is likely to be of most permanent value because he had already given much study to the language and religion of Tibet, and acquired some knowledge of the people by wanderings along the frontier. His book is decidedly interesting. It contains a great deal of new matter regarding the country, descriptions of the scenery and the natives, notes upon the buildings, the customs, the religious pictures and the religious rites. It is in these respects so good that we are surprised it is not better. The author has seen a great deal, but he does not impress us as a man of a scholarly, independent, and broadly cultivated mind. Politically, he is an Anglo-Indian jingo of the familiar type, who sees no rights in any country but his own, and who in this instance does not recognize the Tibetan side of the case, but assumes that the British may go wherever they like, and that their objects are always admirable. Now and then, however, he has glimmerings of the fact that the conduct of Christian nations does not wholly correspond to the precepts of their faith, and he candidly records a conversation he held upon this subject with the high Tibetan ecclesiastic who acted as Regent after the flight from Lhasa of the Dalai Lama, and whom Col. Waddell, in his desire to find parallels in Tibet for Western things, quaintly calls "the Cardinal" because he ranked among the first Lamas after the Dalai.

"I told him that the mainspring of Christ's doctrine was 'peace and good will to men,' as was Buddha's; that Christ had said, 'Love your neighbor as yourself,' 'Love your enemies,' and that our Christian commandments were of exactly the same number as Buddha's decalogue. . . . On this he exclaimed bitterly, smarting under the defeat inflicted on his country by our troops, 'The English have no religion at all!' And on my inquiring why he thought so, he replied deliberately and emphatically, 'Because I *know* it. Because I *see* it for myself in the faces and actions of your people. They all have hard hearts, and are specially trained to take life and to fight.' . . . I assured him that the people of England spend enormous sums of money on religion, and everywhere have built beautiful churches, several hundreds of which are much finer and more costly than any temple in Tibet, and that the commentaries and other books on our religion would fill enormous libraries many times larger than those of the Tibetan monasteries, and that their priests were real ecclesiastics, preaching to and teaching the people, unlike the Lamas, who never teach the people, but keep all their education within their order, and are therefore not ecclesiastics. Hereupon he answered, with a fine scorn: 'But what is the good of all these buildings and all these books and teachings, if the people do not read them, or, in any case, do not practise their maxims?' As he was so hopelessly biassed, I could only reply that I hoped he would judge us more generously when he knew us better, and that he might discover that, because of our superior strength in war, we could now afford to exercise the Christian principle of showing mercy to the weaker."

There are some other passages in which Colonel Waddell shows a certain measure of sympathy with the people to whom the expedition was engaged in giving (by bullets and bayonets) lessons in practical Christianity. Much as he contemns the Lamas, he observes (p. 447) that "the best religions may sink into superstition," though the illustrations he gives from the public worship of the more extreme party among the Scottish Presbyterians is foolish and indeed offensive. The resemblances he points out between Lamaism and the monasticism and ceremonies of the Roman Catholic Church are sometimes curious, but it is not a becoming thing to refer frequently to the Buddhist service as "Mass." However, we are so glad to have the body of new facts regarding Lhasa and Tibet which the book contains, and so willing to recognize the graphic way in which aspects of nature and man are often described in it, that we will pass away from any further criticisms on the writer to note some of the interesting new data which we owe to him.

Not all of the country wears that forbidding character which we have gathered from the 'Himalayan Journals' of Sir Joseph Hooker, who looked into it from the south, and from the travels of Dr. Sven Hedin and other recent explorers who have traversed its northern and northwestern regions. The valley of the Tsang Po and the valleys of the tributaries which it receives in its middle course, near to one of which Lhasa is built, have a good deal of level ground, and are in parts well cultivated. Lhasa, placed at a level of 12,290 feet above tide-water, stands among fertile fields of corn and vegetables. There are orchards of temperate fruits, and masses of brilliant wild flowers along the brooks, "clematis and potentillas, scarlet arums, buttercups, primulas and harebells" (p. 420). Still richer is the lower part of the Tsang Po valley, though, owing to the proximity of fierce tribes, it is but thinly peopled. Indeed, one gathers that the population of Tibet, which is estimated at a million and a half, is decreasing, owing, in our author's opinion, to "the enormous tax of celibate Lamas which the present priestly government exacts from the people, about one out of every two males; and to a lesser degree the practice of polyandry and promiscuity, decimating epidemics of small-pox, and bad administration. Not one-half of the arable ground is cultivated, and there may everywhere be seen evidence of the shrinkage, in abandoned tracts of former cultivation." Although much of the cultivated land appears to be watered by irrigation canals drawn from the streams, the rainfall is larger than has been usually assumed. It is given approximately as thirty inches for the neighborhood of Lhasa. Nearly all of this, however, falls

during the summer months, the period when on the other side of the Himalayas the rainfall ranges from two hundred and fifty to three hundred inches, or even more. Colonel Waddell says little about the line of perpetual snow, but we gather from occasional references that it averages about 14,000 or 15,000 feet. It is somewhat lower further south, on the southern slope of the Himalayas, where moisture is more abundant.

Of the scenery we hear rather less than we desired and expected. As the mountains rise from a plateau varying from twelve to fifteen thousand feet in height, peaks even so high as 24,000 do not produce anything like so grand an effect as do the outer Himalaya ranges when seen from the plains of India or from the profound gorges excavated by the torrents which find their way from the glaciers down to those plains. At Darjiling, on the borders of Sikkim, the eye takes in nearly the whole height of the stupendous mass of Kinchinjunga, for the bottom of the valley of the Tista is only a thousand feet above sea level, while the summit of that mountain exceeds 28,000. The peak on whose beauty our author dwells is Chamalari, a little over 24,000, by the western foot of which the expedition passed. He mentions no summit of notably greater height, and reports that the detachment of the British force which marched back into India along a route to the northwest behind the main chain, did not discover any peak more lofty than the one which the maps call Mount Everest, and which is variously known to the Tibetans and Nepalese who live near it by the names of Choma Kankar, Zapchi Kang, Gaurisanhar, and Devadhunga. Much debate seems to have arisen as to the name which it is best to apply to this summit, supposed to be the highest upon the earth's surface. Few will desire that it should bear the surname of an Indian surveyor, given to it by the map-makers when its native appellations had not been ascertained; and as the Tibetan name of Choma Kankar means (according to Col. Waddell), 'The White Lady of the Glaciers,' and is the name under which they worship it, or the spirit which dwells in it, this seems a proper title to adopt. This summit was not seen by the main body of the expedition, but it 's visible from Darjiling and from the heights above Katmandu in Nepal.

The hopes which the British seem to have formed of a great and profitable development of trade with Tibet, and which were used to furnish a secondary justification of the invasion—the primary one was of course the alleged intrigues of the Lamas with Russia—receive little encouragement from the facts set forth in these pages. Very few minerals are known to exist, and even the gold mines, about which many tales have been told, remain in the sphere of conjecture and belief rather than in that of fact. Borax is exported, and some wool and musk and furs, but in no great quantity. The country is (except the few fertile valleys already mentioned) so poor, nineteen-twentieths of its area being a high and barren waste, and the population is so small, that it furnishes a quite insignificant market for Indian or European goods. Doubtless the population might, under a better government and easier modes of transport, be expected to increase, and industries like the making of cloth and of rugs might be further developed; but when all this has been done, the gain to India from the trade with Tibet is not likely to exceed the interest upon the sums which the British Government in India has already expended upon the expedition, not to add that another expedition may be needed if the Lamas revert, as they will probably do, to that policy of exclusion and seclusion which they have for so many centuries followed.

The most interesting parts of this book are those which treat of the religion of the country, and the singular ecclesiastical organization which rules it. Buddhism is very different here from what it is in Ceylon, or from that still purer and more philosophic form which prevails in Siam. It has been so largely tinged by the primitive spirit worship of the Tibetans and of the cognate Indo-Chinese races which inhabit the long line of the Himalayas and the mountains of southeastern China and northern Burma, as to have become a species of idolatry, full of magical rites and incantations. Indian asceticism has also affected it, and has produced, not only the vast monasteries and nunneries in which so large a part of the inhabitants dwell, but also anchorites, whose severities of life exceed even those practised by the monks of the Thebaid in the fifth century, or those of the Celtic hermits, who banished themselves to bare rocks in the Atlantic, off the western coasts of Ireland and Scotland. Col. Waddell describes a visit to the cells of some of these anchorites in a rocky glen near the town of Gyantse. The recluse lives in a small cave, walled up at the mouth, with an aperture just large enough to permit him to pass out his hand to draw in the parched grain which constitutes his only sustenance, and which is brought to him once a day. His hand is gloved, that the light may not touch it, for part of the merit of his seclusion consists in the withholding from himself of all light. Here the self-made prisoner remains for many years, perhaps for life, neither seeing nor speaking with any living soul, and in so far worse off than even St. Simeon Stylites on his pillar or an Irish saint on his rock amidst the waves.

"Whilst interred in his living tomb, the hermit is given ghoul-like implements for his work and food—a rosary of bits of human bone, a trumpet of human thigh-bone, a goblet made out of the top of a human skull to hold his food. The tasks set him consist chiefly in the mummery of repeating millions of times a spell in meaningless Sanskrit jargon, accompanied by certain gestures and attitudes of the fingers and limbs for the purpose of expelling devils. At various stages of the repetition he must conjure up in fancy the most malignant of the devils, one of those hideous monsters which disfigure the walls of all the Lama temples, whom he must then vanquish by his spells" (p. 243).

Some of the monasteries contain large libraries of ancient books, mostly Tibetan translations of the Buddhist Scriptures of India, narratives of the life of Buddha and commentaries upon his sayings. Some books, however, consist of historical or quasi-historical narratives, purporting to go back to the seventh century of the Christian era. Col. Waddell describes the Lamas as being mostly stupid and ignorant fellows, who make little or no use of their books, except of those which enumerate charms and other appliances of sorcery. One exceptionally intelligent Lama denied all knowledge of those so-called "Mahatmas" about whom we heard so much, and believed so little, a few years ago.

We have left ourselves no space to deal with the description given of the aspect and buildings of Lhasa itself, a picturesque and striking, albeit revoltingly dirty, city. But this description is long, and could not easily be abridged. The book, if it is far from satisfying our curiosity regarding the religion and history of this strange country, does add substantially to our knowledge, and well deserves the attention of those whose interest in Tibet is not confined to the superficial aspects of the people or to the political questions which the English expedition has raised.

A CONFEDERATE LADY'S DIARY.

A Diary from Dixie, as written by Mary Boykin Chestnut, wife of James Chestnut, jr., United States Senator from South Carolina, 1859-1861, and afterward an aide to Jefferson Davis and a Brigadier-General in the Confederate Army. Edited by Isabella D. Martin and Myrta Lockett Avary, D. Appleton & Co., 1905. Pp. xxii., 424.

A diary is almost inevitably a record of the most vivid impressions its writer receives; but some minds are unimpressionable to certain subjects and very impressionable to others. No woman, except perhaps Mrs. Davis, had better opportunities than Mrs. Chestnut to see what was going on not only in Charleston, Montgomery, Richmond, and Columbia, but also, at times, near the army, on plantations in South Carolina and in Alabama, and at two summer resorts hundreds of miles apart. The result is hardly equal to the opportunities, for these were very great. Wendell Phillips once said: "Tremble, my friend, if your sixpenny neighbor keeps a journal. 'It adds a new terror to death.' " This diary would have warranted less trembling and fear of death by any friend than by the author herself and her family. Frankness compels us to say—and let it not prejudice the reader's mind against either the diarist, long dead, or her just published book—that among the ten or fifteen somewhat similar books written by Confederate women this one shows least of the typical Southern spirit of self-sacrifice, and contains more vain chatter about looks and flirtations and love-making than all the others together. At a time when so many women were heroic, industrious, thrifty and serious-mindedn, she was primarily a tittle-tattler, with both tongue and pen. And she moves one's pity when she tells of her often vapid and spendthrift festivities, and then quotes her husband's well-deserved but not very effective reproaches (pp. 257, 263, 271). Yet, strange as it may seem, even such jottings about frivolities have considerable interest and some historical value. Now we know that Cupid and Mars were like secret allies playing hide-and-seek in the dark, and that there was generally much more gayety than most contemporaries, looking through their tears, were able to see.

Contrary to what one might infer, Mrs. Chestnut's mind was, in regard to many subjects, both open and almost photographic; she was often very candid, and occasionally displayed rare literary skill or, at least, sprightliness. Scattered here and there are many vivid descriptions, both in-

teresting and historically valuable. Ten days before South Carolina passed her ordinance of secession, the diarist wrote:

"In Camden [near Columbia] we were busy and frantic with excitement, drilling, marching, arming, and wearing high blue cockades. Red sashes, guns, and swords were ordinary fireside accompaniments. So wild were we, I saw at a grand parade of a home guard a woman, the wife of a man who says he is a secessionist *per se*, driving about to see the drilling of this new company, although her father was buried the day before."

Mrs. Chestnut tells, in many bits and often only incidentally, much that is important or amusing, and sometimes both, about four generations of the Chestnuts, who ranked as prime aristocrats. The first one, John, being driven by the French and Indians from his father's farm in Virginia, went to South Carolina, where he was a clerk in a little grocery store owned by a Joseph Kershaw. Within a few years John became a rich planter, and sent his son, James, to Princeton, where tradition says he was called "the Young Prince." James's wife was a Northern woman of fine quality. He increased the wealth he inherited, and was a perfect type of the lordly patriarch, "brought up when men were not saints." He is said to have owned about a thousand slaves, and to have had sixty or seventy in the families of his house-servants alone. It would be safe to believe that he owned over five hundred slaves and was worth nearly $1,000,000, at a time when there were only a few millionaires even in New York city. In November, 1863, after there had been a blockade for two and a half years, his fine wine-cellar was still unexhausted of its "ancient Madeira and champagne." "If everything in the Confederacy were only as truly good as the old Colonel's wine-cellars!" (p. 249). Then, not many months later, in 1864, when he was over ninety years of age, he wrote, "Starvation stares me in the face." His son, James, jr., also educated at Princeton, was the Senator and Secessionist. He was too wealthy, in expectation, to give much attention to planting. But he played his political rôle with dignity if not with wisdom; and the sober-minded manner in which he looked at problems and accepted public and private adversities, seems to put him high above nearly all the other Confederate politicians in South Carolina.

Next was "Johnny," a plantation exquisite, who had just reached his majority and was beginning to enjoy his inheritance. When South Carolina seceded, he had cash enough in his pocket to raise a military company for himself; but, as the money was squandered ere the serious call to arms was sounded, he then turned hero. "So John Chestnut is a gentleman private. He took his servant with him all the same" (p. 59). And later Mrs. Chestnut remarks, "It takes four negroes to wait on Johnny satisfactorily" (p. 187). Johnny became a captain and had several furloughs. In November, 1863, these snapshots were taken of him:

"I do not think he has an idea what we are fighting about, and he does not want to know. He says, 'My company,' 'My men,' with a pride, a faith, and an affection which are sublime. . . .

"Yesterday Johnny went to his plantation for the first time since the war began. . . . 'How do you do, Marster! How you come on?'—thus from every side rang the noisiest welcome from the darkies. Johnny was silently shaking hands right and left as he rode into the crowd. As the noise subsided, to the overseer he said: 'Send down more corn and fodder for my horses.' And to the [slave-]driver, 'Have you any peas?' 'Plenty, sir.' 'Send a wagon-load down for the cows at Bloomsbury while I stay there. They have not milk and butter enough there for me. Any eggs? Send down all you can collect. How about my turkeys and ducks? Send them down two at a time. How about the mutton? Fat? That's good; send down two a week.' . . .

"'I was surprised that you did not go into the fields to see your crops.' 'What was the use?' 'And the negroes; you had so little talk with them.' 'No use to talk to them before the overseer. They are coming down to Bloomsbury, day and night, by platoons, and they talk me dead. Besides, William and Parish come up there every night, and God knows they tell me enough plantation scandal—overseer feathering his nest; negroes ditto, at my expense. Between the two fires I mean to get something to eat while I am here.'

"For him we got up a charming picnic at Mulberry. . . . Then we had as good a dinner as mortal appetite could crave; the best fish, fowl, and game; wine from a cellar that cannot be excelled" (pp. 250-51).

A few months later, in Richmond: "February 12, 1864. John Chestnut had a basket of champagne carried to my house, oysters, partridges, and other good things, for a supper after the reception. He is going back to the army to-morrow."

Johnny survived the war, but, like all others, lost nearly everything. A descendant and namesake of the Joseph Kershaw that had employed Johnny's great-grandfather, had become one of the most distinguished of South Carolina's soldiers. Johnny, pretending to believe that the shop-keeping Kershaws had long boasted that their ancestor once had a Chestnut as a clerk, expressed the hope that this military distinction would enable them "to let the shop rest for a while." Such was Johnny, "who saunters along here now [May, 1865], the very perfection of a lazy gentleman, who cares not to move unless it be for a fight, a dance, or a fox-hunt" (p. 393). The Chestnuts were exceptions, and so far disproved the popular saying that there were rarely more than three generations between shirt-sleeves and shirt-sleeves (p. 392). The Chestnut estate had not even been divided in four generations.

The shifting attitude of master and mistress towards the domestic slaves and vice versa are sometimes picturesquely described in a few sentences like these:

"Not by one word or look can we detect any change in the demeanor of these negro servants. Lawrence sits at our door sleepy and respectful, and profoundly indifferent [although Anderson has just surrendered Fort Sumter]. So are they all, but they carry it too far. . . . People talk before them as if they were chairs and tables. They make no sign" (p. 38).

And, a month later, in Alabama:

"Saw for the first time the demoralization produced by hopes of freedom. My mother's butler (whom I taught to read . . .) contrived to keep from speaking to us. He was as efficient as ever in his proper place. . . . His wife came to my bedside next morning with everything nice for breakfast . . . and embraced me over and over again" (p. 53).

Within another month the slaves on the main plantation of the Chestnuts "were found with pistols." From about this time nearly everybody suspected that the slaves were thinking of flight. The field-hands, the chief sufferers from slavery, were most prone to steal away. Many body-servants, if intelligent and faithful, were often much pampered.

"Lawrence has charge of all Mr. Chestnut's things—watch, clothes, and two or three hundred gold pieces that lie in the tray of his trunk. All these he tells Lawrence to bring to me if anything happens to him. But I said: 'Maybe he will pack off to the Yankees and freedom with all that.' 'Fiddlesticks! . . . After all, what can he ever be better than he is now—a gentleman's gentleman?'" (page 84).

But Mrs. Chestnut remained skeptical. She had a wadded belt made in which she put her gold coin and diamonds; yet she records:

"I leave it under my pillow, and my maid finds it there and hangs it over the back of a chair in evidence. . . . When I forget and leave my trunk open, Lawrence brings me the keys and tells me, 'You oughten to do so, Miss Mary.' Mr. Chestnut leaves all his little money in his pockets, and Lawrence says that is why he can't let any one but himself brush Mars Jeem's clothes" (p. 112). "I fancy the negroes are ashamed to rob people as careless as James Chestnut and myself" (p. 153).

In March, 1862, the field-hands offered to fight for the Confederacy if Chestnut would arm them, but he "says one man cannot do it. The whole country must agree to it. He would trust such as he would select, and he would give so many acres of land and his freedom to each one as he enlisted" (p. 147). And after the war had ended: "The fidelity of the negroes is the principal topic. There seems to be not a single case of a negro who betrayed his master, and yet they showed a natural and exultant joy at being free" (p. 385).

Then there are glimpses of hospital life—the pitiable soldiers with "eyes sunk in cavernous depths and following me from bed to bed"; of the straits so many persons were put to before obtaining food and clothing; of numerous wounded heroes, especially Hampton and Hood; of the mourning and anguish every battle caused in a thousand homes; of Jefferson Davis on his Arabian horse, "graceful and easy in the saddle," as "his worst enemy will allow"; of the daredevil Toombs, "charging too recklessly," thrown, his foot caught in the stirrup—and "down there among the horse's hoofs was a face turned up toward us, purple with rage. . . . , " and then, "though awfully tousled and tumbled, dusty, rumpled, and flushed, with redder face and wilder hair than ever, he rode off gallantly"; of Benjamin, "a Delphic oracle, of the innermost shrine"; of an auction-sale of what was known to the trade as a "fancy-girl," "a bright mulatto with a pleasant face," "magnificently gotten up in silks and satins," and looking "so like my good little Nancy" "I . . . felt faint" and "sat down on a stool in a shop and disciplined my wild thoughts" (p. 13); of Mrs. R. E. Lee and her daughters and other ladies, sewing for the soldiers; of soldiers themselves, now marching ten thousand strong, now on apparently miles of platform cars, "rolled in their blankets, lying in rows, heads all covered, fast asleep"; of men at a station, "sitting on a row of coffins, smoking, talking and laughing, with their feet drawn up in tailor fashion to keep them out of the wet"; of "sandhill tackeys," more widely known as "crackers" and "poor-white-trash"—"one, forlorn, chill, and fever-freckled, yellow, dirty, and dry as a nut," with a few

peaches to sell, but saying, "Eat your fill. I never charge our soldiers anything"; and of many other sights peculiar to that strange time. Of course, such things are not quite history. But many of Mrs. Chestnut's phrases and sentences make such true pictures, although sketched with an impressionist's touch, that they mean more than a score of ordinary "original documents" from which our dry-as-dusts could make long and dreary quotations and pile up pedantic footnotes. Therefore, we find it easy to forget Mrs. Chestnut's peculiar weaknesses.

MERZ'S HISTORY OF RECENT EUROPEAN THOUGHT.

A History of European Thought in the Nineteenth Century. By John Theodore Merz. Edinburgh and London: William Blackwood & Sons. 2 vols. Pp. 458, 807. 1903-04.

One of the most remarkable characteristics of American society at the present time is the University Zeal. Thirty years ago colleges satisfied us. The title University was indeed sometimes employed, usually in a vague way, sometimes as equivalent to College, seldom as superior. At most, the University was a group of high schools or faculties. Now it is changed. There are a score of institutions which claim to be "true" universities because they are endeavoring to advance knowledge and to develop the talents of superior scholars above and beyond the standard of what is called a liberal education or a general preparation for active life. "Graduate Studies" and "Research" are the shibboleths of University Zeal. An association has been formed and delegates meet every year to discuss the problems of higher education. Munificent sums are given to these institutions, which continue to ask for millions as confidently as the colleges used to ask for their *centum mille* endowments.

To all who are filled with the University Zeal, the volumes before us are addressed—not directly, it is true, but indirectly—for here may be found a learned and elaborate review of the conditions by which Thought has been promoted, and a discriminating analysis of the tendencies of European Thought during the century just closed. University Zeal will be enlightened by a careful perusal of these two volumes, the result of long-continued studies in diverse fields. To estimate their value and criticise their conclusions, a score of experts would be requisite, and, as coöperative history is in vogue, we might add that only by coöperative criticism could an accurate appreciation be formed of these suggestive and illuminating volumes. This is doubtless the reason why so little notice has been taken of them.

The author, Dr. John Theodore Merz, of Newcastle-upon-Tyne, is a sexagenarian, more or less concerned (unless we are mistaken) in chemical and electrical business, who received his early education in German universities, became a doctor of philosophy, and afterwards received the honorary degree of D.C.L. at the University of Durham. Twenty years ago he published a memoir of Leibnitz in the series of Philosophical Classics, edited by Dr. William Knight. The first volume of the work now before us appeared in 1896, and the second, seven years later. The author restricts his view to Europe, and still further limits it chiefly to Great Britain, France, and Germany, touching but lightly on the Scandinavian, Russian, Dutch, and Italian contributions, and not at all, so far as we have noticed, upon the Japanese. He confines himself also to scientific thought, reserving his studies of philosophical and theological thought for future volumes.

His neglect of American contributions to the thought of the last century would awaken sharp animadversions if the author's spirit were that of one of his reviewers, who coldly dismisses the New World with these remarks (in the *Academy* for January 9, 1904): It is "almost unnecessary to discuss any American contribution in the history of nineteenth-century thought. Indeed, it is a serious matter, this, and one to give us pause, that the great Transatlantic Republic has yet to produce thinkers who shall be numbered with the immortals." But the author's estimate, unlike his critic's, is not depreciative; it is simply agnostic.

"The steady growth," he says, "and peculiar civilization of a new and vigorous people, on the other side of the Atlantic, force from me the twofold confession, that there is a large world of growing importance of which I have no personal knowledge, and to estimate which I therefore feel unqualified and unprepared; and further, that I am equally unable to picture to myself the aspect which the whole of our European culture in its present state may assume to an outside and far-removed observer who is placed in the New World. As this New World grows not only in numbers and national wealth, but also in mental depth, as it becomes more and more intellectualized and spiritualized, so it will no doubt experience the desire of recording its own inner life and culture, emphasizing the peculiarities which distinguish it as a whole from our cvilization. But the tendencies of this new culture are to me vague and enigmatical, and I frankly admit that I am unable to say anything definite on this subject" (i., p. 14).

Notwithstanding this restriction, American writers have not all escaped the eagle's eye, although the omissions are quite as noteworthy as the introductions.

Throughout this treatise the word Thought is used in a specific, if not in a technical, sense. No synonym satisfies the author—not Science, nor Philosophy, nor *Wissenschaft*, nor *l'Esprit*, nor Learning. In a footnote at the beginning of the first chapter, there is an interesting discussion of the special significance of these terms. The fundamental position of the author is this, that our age is elaborating, by the concurrence of many agencies, a deeper and more significant conception of the unity of all human interests, of the inner mental life of man and mankind. Not in one direction nor under one term can this treasure be cultivated, but individuals and peoples in their combined international life exhibit and perpetuate it. "The word Thought seems to me to be capable of the widest application, and to denote in the most catholic spirit whatever of truth and value may be contained in the combined aim and endeavor of all these modern aspirations. A history of this thought will be a definition of Thought itself."

The treatise is based upon a threefold division of Thought, scientific, philosophical and individual; and the author maintains that the nineteenth century has seen a great development of scientific thought, a great revival of religion, and a development, richer than in any preceding age, of philosophical theories and systems. Yet it is only Science, as we have said, that he here discusses. He enumerates four prominent and novel constructive ideas which have sprung up in the course of the century—namely, Energy in its conservation and dissipation; the doctrine of averages, statistics and probabilities; Darwin's and Spencer's idea of Evolution in science and philosophy; and Lotze's peculiar view of the world's "values" or "worths." These he terms "centres of thought."

Our inheritance from the earlier past is thus spoken of. The whole fabric of society, the whole structure of science and knowledge, all the applications of art, have to be remodelled on new principles to meet our changed demands.

"Very few of the old creations remain. One or two so-called laws of science that survive, a few dozen books that are reedited, half a dozen works of art, one or two great poems—this is about all that the nineteenth century will at its close have preserved as the living inheritance of its early years: all the others will be relegated to the growing bulk of historical records. Possessed of merely monumental interest as documents of a bygone life, these creations had to be left aside as incapable of marking or guiding any longer our onward career. A few centuries lapse, and posterity will look upon them as we do on the huge monuments of early Eastern civilization, on the Sphinx in the desert or the Pyramids of Egypt, wondering by what ingenious contrivances they were raised, what amount of human work and suffering they represent, or what idea lived in the minds of those who planned and placed them where they still remain."

Let us rapidly follow the geographical sequence which the author adopts. France led off, and early in the century established the home of the scientific spirit. This resulted from the union of three forces—the use of exact mathematical methods; the cooperation fostered by the Academy of Sciences (founded by Colbert for research) and by the network of provincial academies; and the Governmental support of scientific work and scientific schools. The popular appreciation of science by men of letters was a supporting agency. The recognized chieftains were Laplace, who lived until 1827, and Cuvier, who died in 1832. The former won this distinction by his epoch-making treatises on the Mechanism of the Heavens and on the Theory of Probabilities; the latter, by his genius in carrying exact research into the centre of individual and organized life, grounding it on the sciences of comparative anatomy and palæontology, of which he was the creator. "The nineteenth century knows no greater figure than Cuvier."

The German mind has found its most characteristic expression in its university system. For the higher intellectual work of the nation and of mankind, Germany had the most powerful and best-equipped army in the pursuit of pure truth and knowledge. If this phase is passing away, "the future will count among the greatest bequests of the immediate past that high and broad ideal of science which the life of the German universities has traced in clear and indestructible outlines." Notwithstanding the vigor of the universities, they were wanting in union and organization, and this disadvantage led to the establishment of scientific periodicals which were the medium for the exchange of ideas and the collecting-ground for researches in an age

when exact science was not systematically taught. The publication by Gauss, in 1801, of his 'Disquisitiones Mathematicæ,' and, shortly after, his invention of a new method of calculating the orbit of a planet, introduced the higher and abstract branches of science into the programme of a German university. Jacobi, seventeen years younger, led the first great school of mathematicians in Germany, and his work was well supported by the journal everywhere known by the name of Crelle. The experimental side of exact research received a great impetus from the establishment of the first chemical laboratories by Liebig at Giessen in 1826. A little earlier was Mitscherlich's discovery of isomorphism; a little later, Wöhler's preparation of an organic compound from inorganic materials. Still, the most brilliant performances of the exact spirit of research in Germany during the first half of this century lay in a different direction. They produced that central science which attacks the great problem of organic life, physiology, or, as known by its broader name, biology. The brilliant array of the names of great investigators in its manifold departments, and the enumeration of their contributions, justify the claim that biology is a German science, as chemistry is French—so far as the original impulses are considered.

Four characteristics of the German scientists are forcibly presented—their thoroughness; their endeavors to produce that which should be an integral portion of one great science; their readiness to be teachers; and their combination of science and philosophy. Our author concludes this chapter with a fine passage on the singleness of purpose shown by the Germans:

"The universities not only combined in themselves the spirit of research and the profession of teaching, but they infused into the widely scattered teaching staff of many hundreds of schools the same habit—almost absent in other countries—of looking upon private study and research as a necessary qualification of the lecturer and teacher. The educational organization of the combined universities and higher schools has thus become an equally powerful organization for research and for increasing knowledge. Wherever the progress of learning and science requires a large amount of detailed study, inspired by a few leading ideals, or subservient to some common design and plan, the German universities and higher schools supply a well-trained army of workers, standing under the intellectual generalship of a few great leading minds. Thus it is that no nation in modern times has so many schools of thought and learning as Germany, and none can boast of having started and carried through such a large number of gigantic enterprises, requiring the coöperation and collective application of a numerous and well-trained staff. The university system, in one word, not only teaches knowledge, but, above all, it teaches research. This is its pride and the foundation of its fame."

When the author turns to England, he refers to the fact that the history of science in France and Germany during the first half of the present century was identical with the history of the Institute of France and of the universities of Germany, and he raises the question, What have similar institutions done in the country of Sir Isaac Newton? Before proceeding to answer it, he names twelve great men, all identified with one or more novel ideas or definite branches of research. Two characteristics have marked most of these English investigators. They have, at all expense and sacrifice, guarded their individual freedom of thought, and they have almost always shown a strong desire to combine some application with their abstract researches, to take part in the great practical work of the nation. No great master in research can point to a school which undertakes to finish what the master has begun. The investigators often refuse to be tied by exclusive academic duties, still more by official restriction. Continental thinkers complain of the want of method and of the erratic absence of discipline which is peculiar to English genius. What England did possess is the idea of a liberal education. This review of the intellectual life of Great Britain and Ireland calls particular attention to the individualism of the English character, the self-reliant strength of natural genius, which comes out most strongly in its great examples of scientific work. It is not likely, says the author, that the works of Faraday and Darwin should be the last illustrious examples of great and far-reaching ideas sprung from the living intercourse of original genius and nature, without the support of any school.

It is the opinion of the author that, by the want of organization for research and teaching, such as other countries possess, the ideas of English thinkers have frequently lain dormant or have been elaborated by foreigners; but, consequently, original minds have been forced into a closer communion with nature and with life. It is his conclusion that the impartial verdict of history will be that "the largest number of works perfect in form and substance, classical for all time, belongs probably to France; the greatest bulk of scientific work probably to Germany; but of the new ideas which during this century have fructified science, the larger share belongs probably to England."

This brilliant introduction (which fills two hundred pages) is followed by chapters so long that they may be called treatises, on the manifestations of European thought in ten directions or groups of ideas. These are the divisions: Astronomical, Atomic, Kinetic, Physical, Morphological, Genetic, Vitalistic, Psycho-Physical, Statistical, Mathematical. Throughout the volumes, the footnotes are numerous and are even more entertaining than the text, because a certain freedom of style is permitted and many literary allusions are introduced. They are replete with lore. The geographical sequence is discontinued. Each of the summaries is crowded with facts and allusions, varied and interesting. The estimates of the author (sometimes repeated) are so intricately interwoven with these summaries, and his language is so compact, that it is quite impossible, in a notice like this, to do justice to them. The second volume is almost an historical encyclopædia of modern science, written with such care that specialists in each of the main departments must be called in, if judicial opinions of the author's reflections are desired. The index is admirable.

It may not be amiss to commend the entire work to a careful perusal of the scientific associations and reading circles now common in our higher institutions. Such a study would tend to broaden the mind of any reader, and to take him out of the specialization which often impedes intellectual activity, especially if indulged in at too early a period of life. The varied and exact learning of the author, his literary skill, his vivid portraiture of remarkable men, and his judicial temperament, are everywhere apparent.

Bryan's Dictionary of Painters and Engravers. New edition. Volume V. S-Z. London: George Bell & Sons; New York: The Macmillan Co. 1903-1905.

In previous notices of the several volumes of the present edition, we have considered the general advantages of this work in its older and its newer form; its acceptance as on the whole the most useful dictionary within its limited field; and also its drawbacks—such as the absence of readily found dates of birth and death; the absence, in many of the new notices, of that useful feature, the tabulated names of the artist's works; the frequently slight modification of inadequate old notices, especially with regard to the giants of the Continental schools; the unduly enthusiastic and disproportionate character of notices given to Englishmen of recent times. To all this should be added, now, the absence of any system of headlines or running-titles, or catch-words at the top of the page, so that when you reach a six-page notice you have to turn over leaves backward and forward and run your finger down the columns to find the title-word—the proper name—which should be as easy to locate as a term in a common English dictionary. The many inserted plates increase this hindrance to ready consultation.

When at the proper place, we noted that Ruskin, introduced as art reformer and not as painter or engraver, had a long notice, while the greatest art critics known, though mentioned as painters, had scarce a dozen lines devoted to their critical work, or even none at all. To this may be added, now, that Philip Gilbert Hamerton, most patient and useful of popular instructors in art-matters, but also most prosaic and unstimulating of critics, has a very proper, a most judicious notice; while the brilliant and profound R. A. M. Stevenson (though an exhibiting painter, too, and though he died in 1900) is not granted a line. And why is the author of 'Etching and Etchers' called George Philip Hamerton? Neither the notice in Bryan, nor the very full one in the great Dictionary of National Biography, gives this as an original form of his name; nor does it receive attention in Hamerton's Autobiography and Memoir. And Sir Joseph Archer Crowe—if art critics like Ruskin and Hamerton are admitted, why not also that benefactor of his kind?

In considering the fifth and concluding volume it will be well to call attention to the point which has been noted by many writers in American journals—the absence from the Dictionary of notices of American artists whose names would naturally be looked for. Only a few can be given here of the long list of names which we have prepared for comparison with the columns of Bryan. The date after each name is the date of death. Men who have died too recently for mention are not given, *e. g.*, Robert F. Blum, who died in the same year that the first volume was published. Noticeably absent, then, are the names of George A. Baker, 1880; Daniel C. Beard, 1900; James H. Beard, 1893; William Bradford, 1892; J. F. Cropsey, 1900; A. B. Durand, 1886; Wyatt Eaton, 1896; George Fuller, 1884; W. Hamilton Gibson, 1896; James

M. Hart, 1901; William Hart, 1894; W. S. Haseltine, 1900; Thomas Hovenden, 1895; George Inness, 1894; George C. Lambdin, 1896; Jervis McEntee, 1891; Homer D. Martin, 1897; Theodore Robinson, 1896; J. H. Twachtman, 1902; and A. H. Wyant, 1892. Obviously it is not practicable to include in one alphabetical list an essay on each and every painter and engraver whose name is known to well-informed students of art. Obviously every one who consults this Dictionary must judge for himself how far the numerous omissions are reasonable; and the editor of the new Bryan might say that he did not pretend to completeness in such an outlying painter's field as the United States. Still, it is the critic's part to point out the omissions, and such names as Fuller, Inness, McEntee, Martin, Robinson, and Wyant at least would seem to claim a place in every dictionary of artists. The question should be put to every future editor of such a book, Can you afford to dispense with an assistant editor for the United States?

If a similar overhauling of the great French school be made, not so many omissions would appear, not so much complete ignoring of the strong men; the method adopted with them in order to save room for the Englishmen and the Italians is to give to the recent Frenchmen only a very few words. Thus, while some painters, and especially some engravers, of great worth and renown are left without notice, this is less surprising than that a twenty-line notice should be given to Jean-Charles Cazin or to Thomas Couture; and as to the space, hardly longer, allowed Charles François Daubigny, does our editor really think him inferior, as a landscape painter, to John Constable, who is allowed two columns? Or Diaz, with one-third of a column, does he deserve only one-twelfth of the space allowed to Albert Moore? Or take Paul Huet: if the scale of the Dictionary allows him only about 200 words, what are we to think of the space, six times as great, allowed one who was hardly a working painter at all, Sir Charles Eastlake? One is driven to the conclusion that the book has been prepared for British students; and that the British student recognizes as of full rank among painters only those of the Revival and the following years in Italy, and his own countrymen of the British Isles. So it is that in Volume V. admirable work has been done on the lives and works of those early Italian painters of whom much that is new has been discovered. The preface to this volume names many of them. The other Italian men, better known but never known enough, Signorelli, Tiepolo, and Leonardo da Vinci, have been selected for careful study, and the article on Titian is notable for its discretion and its selection of material from the vast store accessible. So, among the Englishmen, Turner is the subject of a faultless article, much too short except for its long lists of special works. Of Whistler there is excellent criticism and an exhaustive catalogue, and the article on George Frederick Watts is full, and errs only in that exaggerated praise, that constantly recurring note of admiration, which it is natural for a friend (in this case Mr. M. H. Spielmann, the historian of *Punch*) to use when treating of the abundant and striking work of his friend so recently dead.

The conclusion must be that the great new Dictionary is not well and strongly edited; that no proportionate scale has been maintained; that there are unaccountable omissions, and still more unaccountable shortcomings in the treatment of some of the greatest personalities in art; and that the book is insular beyond belief. In spite of all that, it is still the most useful dictionary of painters we have, and also a relatively good dictionary of engravers.

William Hickling Prescott. By Harry Thurston Peck. (English Men of Letters.) The Macmillan Co. 1905.

A new life of Prescott should give emphatic reasons for its existence, and this is afforded in one side of Professor Peck's biography. His view of Prescott strictly as a writer—his description of his methods of working, the gradual improvement of his style, the general character and comparative value of his successive histories—is concise, clear, and judicious. The chapter on the 'Conquest of Mexico,' the criticisms it has undergone, and its permanent value, is excellent.

We may equally praise the account of Prescott's reception in England. But, with this slight exception, the account of Prescott as a man is far from satisfactory. It is instinct with what it is greatly to be feared the author would call "modernity." He seems wholly incapable of liking or even of understanding Puritans, or the descendants of Puritans. The Prescott race no doubt was not conformed to the image which that name ordinarily suggests; but they and their children—the soldier, the judge, the writer—were all born with the Puritan sensitiveness of conscience. It was this that converted the last of the trio, with every imaginable excuse, external or internal, for idleness, into one of the hardest workers of his time; it was this that made him sternly control, if he did not eradicate, a number of very harmless and even amusing weaknesses. Professor Peck, however, seems to set little value on this discipline of conscience. He is full of the decadent doctrine that any man, to be truly lovable, must have a strong "human" (*i. e.*, vicious) element. He is really sorry that the historian of Cortez suppresses an unsavory incident which affects the story in an infinitesimal degree. He ascribes this truly to Prescott's innate purity of mind (p. 144), which he calls "interesting," "delicate," "sensitive," instead of falling down in awe before it as he ought. On the contrary, he insists on reading between the lines of Prescott's early life, and inferring that Prescott must have been "human"—in other words, dissipated—in a passage which may serve as a model of what inferential analysis of a man's life ought not to be (p. 29).

The introductory chapter, on the literary history of the country, is, to say the least, eccentric. Surely, when he settles Bryant prematurely in New York, Mr. Peck knows that "Thanatopsis" first appeared (a fragment, it is true) in the *North American Review*, and that Bryant, wherever he lived, was a Yankee pure and simple. There are a variety of other peculiar statements; perhaps the most flagrant is saying that Scott dictated the 'Bride of Lammermoor' to Lockhart (p. 86). "Oxford," of course, is the usual term employed by Americans for either English University (p. 3).

WE HAVE JUST ISSUED

Mrs. Hugh Fraser's A MAID OF JAPAN. The love story of Himé, the shell gatherer, who was a daughter of the East and West. Mrs. Fraser's "Letters from Japan" is one of the most telling books dealing with that country, and her works have met with favor from the Japanese themselves. Mr. John LaFarge, one of the highest authorities on things Japanese, has written at length, praising the present story. The decoration and binding in the Japanese style are designed by Miss Bertha Stuart. 12mo, $1.25.

Fisguill's THE VENUS OF CADIZ. An original, whimsical, scintillating extravaganza, not without heart interest. An unsophisticated Venus of Cadiz (Ky.) and a love-lorn six footer, proprietor of some mushroom caves. Pap, Pup and Pete, and other quaint characters figure in the plot. $1.50.

Besides **The Venus of Cadiz,** we offer as good humorous books, **The Belted Seas,** a remarkable fantastic yarn with a strong element of pathos, which competent critics are comparing with the work of Dickens, Mark Twain, Stockton and Jacobs ($1.50),—Loomis's kindly and amusing **Cheerful Americans,** and **More Cheerful Americans** ($1.25 each),—and Canfield's delightful Munchausen of the Woods, **Fergy the Guide** (with some fifty sketches by Blashfield, $1.50).

RENSEIGNEMENTS GÉNÉRAUX

L'Enseignements de l'École des Sciences Politiques est le couronnement naturel de toute éducation libérale. Chacune de ses grandes divisions constitue en outre une préparation complète aux carrières d'Etat et aux examens ou concours qui en ouvrent l'entrée: (Diplomatie, Conseil d'Etat, Cour des Comptes, Inspection des Finances, Inspection des Colonies), et à des postes d'initiative ou de contrôle dans les grandes entreprises privées.

Les élèves sont admis sans examens, avec l'agrément du Directeur et du Conseil de l'École; il n'ont à justifier d'aucun grade universitaire.

L'enseignement comprend un ensemble de cours répartis en deux années, mais la durée des études peut être étendue à trois ans. Un diplôme est délivré, en fin d'études, aux élèves qui ont subi avec succès les examens.

ANNEE SCOLAIRE 1905-1906.—L'année scolaire commencera le 6 novembre 1905 et finira le 2 juin 1906. On s'inscrira au Secrétariat à partir du 30 octobre 1905. **Inscription d'ensemble** donnant entrée à tous les cours et conférences réguliers et complémentaires et à la Bibliothèque (environ 25,000 volumes et 160 revues et journaux français et étrangers) ..... PAR ANNÉE: **300 fr.**

Une **Brochure spéciale** *donne des renseignements détaillés sur l'organisation de l'École et sur les carrières auxquelles elle prépare.*

S'adresser à **l'ECOLE, 27, Rue Saint-Guillaume, PARIS.**

The Nation.

NEW YORK, THURSDAY, JUNE 22, 1905.

The Week.

National pride is naturally flattered by the selection of Washington as the seat of the Peace Conference, and the compliment implied is the more acceptable in that it places in a clear light the absolute impartiality of this nation, and shows a confidence that President Roosevelt's act was based on altruistic motives. It is, indeed, seldom that a mediatory overture is of so frankly disinterested a character. Those observers who fear to find in the step which the President took in his personal capacity as Chief of State a warrant for his more dubious Central American activities, simply fail to make obvious discriminations. Under the Hague convention a purely pacific mediation is never to be construed as an offensive act. As a measure of sheer humanity, to prevent bloodshed, it is at the antipodes of all steps a nation may take to secure its real or imaginary interests abroad. Magnanimity has laws of its own, and the President is as much to be commended for his sane disregard of precedent in this matter, as he is to be condemned for covering aggressions in the past under a casuistical plea of the general welfare. As for the time of the conference, September will seem to many too far away. Yet unless the plenipotentiaries were to be selected among diplomats already in Europe or America, the details could hardly be arranged for an earlier day. The postponement makes an armistice seem more than ever a necessary prerequisite of peace—and less likely.

If President Roosevelt succeeds in extricating the various Government departments from the tangle of red tape in which they now labor, he will have accomplished one of the most signal and important reforms in the history of the civil service. In his letter of instruction to the very excellent committee appointed to carry out his plans, the President has certainly put his finger on the weak points in our present system. The tendency to regard properly docketed papers as ends in themselves, the needless multiplication of letter-writing and the making of official reports, the preposterous overpayment of some grades of work and the under-payment of others, are all things which a railroad company or manufacturing concern would long ago have regulated in the mere interests of economy. The chief criticism to be made regarding nearly all Government work is not that it is badly done, but that it is needlessly slow and expensive. Dr. Carl R. Fish points out in his recent book, 'The Civil Service and Patronage,' that the Government service attracted, in the heyday of the spoils system, a class of political adventurers who, however unstable and unreliable, often had rather unusual capacity if they cared to use it. These, he says, have been succeeded in the classified service by a steadier but less showy class, who are attracted by steady, moderate incomes, short working hours, and certainty of employment. Washington is full of minor officials whose mastery of detail and understanding of conditions is prodigious, yet who have lost completely the power of initiative. Their inevitable tendency is to cling to the familiarized routine, and there is an element of truth in the common reproach that the Government clerk's constant thought is to make two men's work where only one was before. This evil is far more pervasive than departmental graft, and it may be predicted that systematic efforts at improvement will meet more stolid and obstinate opposition than the probing of actual scandals.

In its haste to obey Presidential instructions and "make the dirt fly," the new Panama Canal Commission, or its engineer, Mr. Wallace, has blundered very seriously. The first bids to be called for were those for dredging Colon Harbor. The Commission issued specifications on May 23, announcing that no bids were to be received after June 15, thus allowing only twenty-three days in which a contractor might go to Colon, get data—which after a year and a half's work the engineers were unable to supply—return to this country, and put in a bid. *No boring results, soundings, or surveys* were given to prospective bidders. Bids were asked for the removal of coral rock, clay, and sand and mud. As no quantities were given until June 9, six days before the bids were to be opened, it was impossible for any contractor to put in a bid, as this had to be accompanied by a bond for 10 per cent. of the work, and a security of 20 per cent. of the entire contract. Since the quantities were withheld until June 9, certain bonding companies refused to make any arrangements, particularly as the contract was to go to the lowest bidder on all three kinds of material.

By what appears to be a regular dispensation, whenever the President initiates a policy Mr. Taft makes a speech. For example, it is known that the President, writing to Secretary Metcalf, has commented in severe terms on the recent outragous treatment of Chinese by the inspectors of immigration; and Mr. Taft, speaking at the commencement of Miami University, gives an inkling of the terms Mr. Roosevelt may have employed. Touching the recent detention and annoyance of educated Chinese, Mr. Taft asked:

> "Is it just that, for the purpose of excluding or preventing perhaps one hundred Chinese coolies from slipping into this country against the law, we should subject an equal number of Chinese merchants and students of high character to an examination of such an inquisitorial, humiliating, insulting, and physicially uncomfortable character as to discourage altogether the coming of merchants and students? One of the great commercial prizes of the world is the trade with the four hundred million Chinese. Ought we to throw away the advantage which we have by reason of Chinese natural friendship for us, and continue to enforce an unjustly severe law, and thus create in the Chinese mind a disposition to boycott American trade and to drive our merchants from Chinese shores, simply because we are afraid that we may some time lose the approval of certain unreasonable and extreme popular leaders of California and other Coast States?"

The gist of the matter is in the last words. Because a few people of demagogical importance hate all Chinese and believe that it is impossible to tell a mandarin from a coolie, both belonging to a slippery race, our whole nation treats all incoming Chinese as potential criminals. Against this policy humanity and trade interest combine; and in fighting this ugly parochialism, and trying to bring Americans to think nationally on a matter of national interest, the President and Mr. Taft may count upon the support of all good citizens. The worst abuses, be it said, admit of prompt executive remedy through a modification of the regulations and practice of the Department of Commerce and Labor.

The meeting of the New York Civic Federation on Monday led to one of the most intelligent and illuminating discussions of the immigration question that we have had for some time. Such facts as were dwelt upon by the speakers ought to have the widest possible circulation, for they offset much of the hysterical talk of danger from foreign immigration. Thus, it was pointed out that, while the aggregate number of arrivals in the last few years has been unprecedented, it has meant relatively a much smaller infiltration of aliens into our population than in the days when foreign immigration is conceded to have been of benefit to the country. In the decade from 1851 to 1860, every thousand residents of this country had the task of assimilating 110 foreigners. In the ten years ending in 1900, however, the immigrants numbered only 59 to ea[illegible] thousand of natives. By way of contrast, at the same meeting a demand was formulated for the exclusion of Japanese, a curious corollary to the admira-

tion which Japan's victories have excited here. It was made, too, on the very day when in China meetings of students and of commercial guilds were discussing means for rendering their boycott of American goods more effective. The two items throw into high relief our preposterous policy of seeking extended markets in Oriental countries at the same time that we subject their citizens to oppressive and humiliating restrictions here.

Judge De Haven's action, in the Federal District Court of Oregon, in overruling the demurrer entered by Senator Mitchell's counsel and sustaining his indictment, opens the way to obtaining light upon the public land frauds. A list recently compiled by the officials of the Land Office shows that seventy-four persons have at various times been indicted for complicity in land frauds in Oregon and California. Of these, six have been tried and convicted, including Senator Mitchell's law partner, Albert H. Tanner, who was charged with perjury. The other five included three land dealers and two men who were merely tools. The cases of John A. Benson, Frederick A. Hyde, Harry P. Diamond, and J. T. Schneider of San Francisco, who were indicted for wholesale manipulations under the "Forest Reserve" law, must soon come to trial in Washington. Their last card was played when, a few weeks ago, the Supreme Court denied a writ of habeas corpus applied for by Hyde and Diamond. With the ousting of Binger Hermann from the Commissionership of the General Land Office a new spirit seems to have pervaded the Interior Department. Just twenty years ago President Cleveland's proclamation, calling upon the authorities to enforce a recently passed anti-fencing bill, was issued, but for twenty years the law has been coolly disregarded. Now the recent indictment of R. M. Allen, manager of the Standard Cattle Company of Nebraska, for the unlawful fencing of public lands has alarmed the grafters. A vigorous prosecution of the Mitchell case will go far toward convincing them and the public that the official attitude toward the land grabbers has really changed.

The past two years have been notable for the disappearance of the United States, at first gradual, then rapid, from the ranks of important wheat-exporters. The Government's returns for May show an export of wheat, in both grain and flour, amounting to 4,000,000 bushels; as lately as May, 1902, they were 15,800,000. The total wheat and flour exports since the harvest of 1904 have been the smallest of any year in our history since 1872. Expert opinion has veered to the belief that our place as a wheat-exporter can never be regained, the three reasons commonly assigned being loss of their early productiveness by the older wheat lands; diversion of the lands to other more profitable purposes, as rural communities grow into urban; and rapid increase in home consumption as our population increases. The past year's experience has actually proved that a crop which would have been deemed very large ten years ago, is now insufficient to feed our people and leave a surplus. But last year's 552,000,000-bushel harvest was small compared with the 727,000,000-bushel yield of 1901; the margin between the two would provide for a very respectable export trade. The test of the coming season will be extremely interesting, because the grain trade has figured out already, from the Government's acreage and condition estimates, an "indicated" crop of some 700,000,000 bushels. June indications are a precarious basis for expectations; it is the two subsequent months which really try the fertility of the soil. Nevertheless, the event should throw light on the country's future place in the grain-exporting world.

From Gov. Folk of Missouri we have come to expect nothing but strenuousness. His order, therefore, to the sheriff of St. Louis County to arrest all who violate the law by betting on horse races, is merely part of a daily routine. In a State as devoted to horses, horse-racing, and betting on horse races as Missouri is, Gov. Folk's firmness will cause both inconvenience and pain; but the Legislature has passed the statute, and the Governor purposes to enforce it even if he has to call out the militia. Gov. Herrick of Ohio has just declared his purpose to start a movement against professional lobbying. "The professional lobbyist," he asserts, "is a criminal. We must do more than arrest, we must exterminate him." This is excellent, although the Governor is aiming a deadly blow at one of the most profitable and best-protected industries of Ohio. In Milwaukee the grand jury meets this week for what the dispatches describe as a "graft-hunt"; and all the small politicians and contractors are running to cover. The Mayors' Association of Connecticut has just held its annual meeting and discussed the troublesome question of Sunday liquor selling. Whether the State will be any dryer than heretofore, no one yet knows. Connecticut, as the world learned in the recent contest for a United States Senatorship, is a land whose steady habits are often bad. But Bishop Brewster has recently spoken in condemnation of immorality in politics, and the ferment started by the Rev. Dr. Newman Smyth may be still working.

The spectacle of the men who ruled Philadelphia autocratically a few months ago, now hurrying to secure bail in anticipation of arrest, is indeed noteworthy. That city, in fact, now knows a good many things about its rulers that it had hitherto only suspected. It came out in court last week that Israel W. Durham, State Senator McNichol, and his wife owned, between them, eleven-twelfths of the stock of the contracting firm in whose interest lower bids on the great filtration plant were thrown out under the Ashbridge administration. Mayor Weaver has promptly followed up this revelation by suspending work on these contracts and ordering a thorough investigation of all their phases. The very boldness of the plunderers appears to have made possible an exposure that leaves no excuse for doubt or question. Thus, the United Gas Improvement Company was so careless about covering its tracks that it had charged up to "permanent improvements" such items as candles, lamp wicks, and soap. We may look forward, then, to the results of probing the filtration contract, with the expectation that it will disprove even the poor boast of downtrodden Philadelphia that its ring was the shrewdest and most resourceful of any in America.

The refusal of Justice Warren B. Hooker to resign and thus save the State from an extra session of the Legislature will excite no sympathy for Chairman Odell and the Republican machinists. They are responsible for elevating to the bench a man of Hooker's character; and, now that his rascality has been made public, they must suffer for their alliance with him. In Hooker himself no sense of decency is to be looked for. A man who will defraud the Federal Government will cling up to the last minute to his salary as justice. He will stay till he is kicked out, in the desperate hope that, by fair means or foul, a third of the Legislature may be won over to his side. If the Legislature meets and, in the face of the evidence already presented, fails to retire Hooker, the Republican party will be badly damaged. Hooker's close personal relations with Odell in times past have been matters of common talk. Under such circumstances anything short of summary punishment for Hooker will be regarded as an exertion of political influence to keep a tainted judge in office.

The agreement concluded between Mr. Ryan and the three voting trustees provides that Equitable Life directors shall hereafter consist of twenty-eight policyholders and twenty-four "lawfully eligible persons," not necessarily policyholders. Every Equitable policyholder is invited to express to the trustees his suggestions for the first-named class of directors. In their discretion, the trustees may decide to confer on policyholders the right to a direct and conclusive

vote for such twenty-eight members of the board. No precise method of obtaining this vote is prescribed. The trustees, after such "mutualization," shall continue to vote in their own discretion for the twenty-four remaining directors. In case of death or resignation of any of the three trustees, he is to be replaced by vote of the survivors. The trust agreement is to be renewed and continued "as long as the trustees shall deem advisable." A provision of some importance is, that "no vote shall be cast upon said stock, for any purpose, except with the unanimous approval of the trustees." It will be seen that, on the face of the agreement, the plan of partial mutualization is for the present safeguarded. But it must also be observed that the agreement makes as yet no sure provision for the longer future

---

The defects of the plan, as of the "mutualization" scheme to which Mr. Hyde agreed last Feburary, are, first, that it makes no provision whereby the policyholders' wishes may be effectively ascertained; second, that it leaves a strong probability of the Society being really managed by the compact majority of twenty-four directors chosen in behalf of the stock, and, third, that confidence based on the personality of any or all of the present voting trustees is dependent on a life-time. In other words, it appears to us, as it has appeared from the start, that the crux of the whole matter is the stock ownership. The agreement with the trustees makes no reference to a purpose of transferring the stock eventually to the company. Indeed, it describes the plan of electing twenty-eight directors through policyholders' vote as "the consummation of said plan for the mutualization of the Society." For ourselves, we cannot so regard it. Even Mr. Hyde's proposition of four months ago was that "if the board, upon such consideration, determines to retire the stock, I shall cheerfully coöperate in the change in any way which has due regard to the rights and equities of both stockholders and policyholders." Mr. Ryan can hardly do less than repeat this pledge. By his own formal statement, he, as the sole purchaser of Hyde's 502 shares of stock, occupies precisely Hyde's former position. It must not be forgotten that the situation involved by single ownership was the cause of the Equitable's troubles.

The Fourth of July racket is beginning somewhat earlier than usual this year. Independence Day is still twelve days ahead, and yet in some streets the din of explosives already keeps up throughout the day and evening. Therefore the invoking of a new section of the Penal Code against a dealer in fireworks who sold a noise-making contrivance that ultimately destroyed a boy's eye, is an item of great interest. It goes without saying that, so long as the authorities permit fireworks to be discharged in our streets, the vending of them is in itself an entirely lawful and legitimate business. Yet, if regulation is to be attempted, the shopkeeper is the man most easily reached. For one thing, he has a definite place of business and can be found, while the small boy who makes the trouble is here, there, everywhere, and nowhere. Besides, the doctrine that the buyer assumes all risk is ludicrous when the buyer is an irresponsible urchin, anxious only to produce as startling effects as possible for as few pennies as possible. Whatever may be said of the orgy of noise on the glorious Fourth itself, it is certainly proper that everything possible should be done to suppress wanton noise-making in the long weeks that precede the holiday.

If it was not given to Maximo Gomez, as to Garcia, to aid the Americans when they landed near Santiago; it was to him that the Americans turned for aid when the Spanish evacuated Havana, and the assistance he then rendered was of far greater value. Thanks to his advice, the Cubans were content to pass through a period of probation; thanks largely to him, the Wood régime came to an end without any public mutterings against that unpopular governor. In return for his services, both the temporary government and the present republic showed themselves grateful by granting large enough sums to make the General's old age more than comfortable—he had sacrificed a considerable fortune in the course of his warring. But this was not necessary to make him throw his weight for peace and internal order. He had had his stomachful of fighting, and he no longer enjoyed friction even of a purely political sort. Up to very recently he had stood, with all his great influence, behind President Palma. Latterly, it was reported that he, too, had grown uneasy over the responsiveness of President Palma to American influences, and there was in consequence some discussion of his name as an Opposition candidate to succeed his friend. His death has interfered with any such schemes. That Gomez would, in any case, have given his consent to any serious opposition to the United States is incredible, for he was quite conscious of the fact that not even his dogged courage and grim determination could have overthrown Spanish tyranny without aid from the United States, first given by individuals and later by the army and navy.

A quarrel on a point of personal dignity seldom is settled on a basis of severe logic, so one may welcome the rumored compromise of the dispute between Berlin and Paris by the calling of a Moroccan conference formal enough to please the Kaiser, but innocuous enough not to displease Premier Rouvier. It appears that Rouvier has assented "in principle" to an international conference, and that Bülow has promised that the congress shall do nothing to impair the Anglo-French agreement. Since that treaty practically has established the lines of Moroccan policy, not only as regards France and England, but also with respect to the world at large, it is evident that an international conference called under the conditions aforesaid would practically have nothing more to do than to ratify the Anglo-French agreement and adjourn. On the other hand, such rather empty proceedings would at least give to Germany that recognition as a Mediterranean Power for which the Kaiser has been contending, and, in case of any weakening of the French-English arrangement, might serve as a precedent for considering the Sherif as the ward of Europe. Since Germany has had excellent success in treating the present "Sick Man of the East," she desires to have the entrée to the equally promising invalid who occupies uneasily the throne of the Moorish Empire. Whether Germany's apparent diplomatic triumph has not been too dearly bought is an open question. Since the Kaiser's speech at Tangier, who can be certain where the mailed fist will next be brandished? The Moroccan affair may very well increase the growing isolation of Germany.

The paradox that reigns in things Russian is illustrated by the contrast between the official attempt to prevent the sitting of the Zemstvo Congress at Moscow and the cordial reception of its delegates at Tsarskoe-Selo on Monday. The Czar not only welcomed the delegates most heartily, but assured them that he counted on their aid in repairing the damage of the war, and, more particularly, promised that "the admission of elected representatives to works of state would be regularly accomplished." He added, "I watch every day and devote myself to this work." And now one may only hope that the generous wishes expressed to the Moscow zemstvoists may become effective. As yet conflicting reports of the peace negotiations, frequent changes in the Ministry of the Interior, and the revival of the Third Section, forbid one to assert that the time of hesitation is over, and that single-minded counsels prevail at St. Petersburg. But, with all these doubts, the "well done" of humanity will go to the Czar for his clear-cut admission of the honorable and necessary aims of the reformers, and for his promise of a representative assembly. Merely to speak such words is a pledge of action, if only on the familiar principle that we sometimes are what we seem to ourselves—*possunt quia posse videntur.*

LABOR AND GRAFT.

The venality of the Chicago labor leaders, as revealed in the current dispatches, surprises nobody. Of late we have supped so full of tales of graft, from the highest finance to the lowest, that news of another walking delegate gone wrong stirs but languid interest. The case of John C. Driscoll, "strike-settling expert," parallels in many features the cases of Parks and Weinseimer of New York. Driscoll admits that in the last five years he has settled some four hundred strikes, large and small, and that he has paid out about $50,000 of employers' money in doing so. These payments, of course, have been made to chieftains in the various unions. Apparently, the presidency of a labor union is in its way a good thing.

The methods of Driscoll were exquisitely simple. According to his own confession, the strike of the clothing makers was a cheap affair, costing only about $500. W. T. Brownridge, president of the National Wholesale Tailors' Association, handed the money to Driscoll, with instructions to "go ahead and fix the labor people." Driscoll accordingly "squared the trouble all right." During the strike of the bakers against the National Biscuit Company, Driscoll was offered various sums of money by the employers if he would keep the teamsters out of the controversy. He turned over some money—he doesn't remember how much—to the officials of the local unions. The result was that the teamsters saw no great moral principle involved; they let the bakers go it alone, and the strike was broken. In the strike of cooks and waiters in 1903 the strikers wanted the teamsters to refuse to carry coal and other supplies to the hotels and restaurants, but the Hotel and Restaurant Keepers' Association raised $500 for Driscoll. As Driscoll himself phrases it, "If it had not been for my influence there would have been plenty of trouble." Frank Rea, business agent of the Commission Wagon Drivers' Union, said Driscoll, "got $5,000 out of the stockyards strike last summer." Naturally, Driscoll had considerable respect for Rea's ability; certain other leaders he contemptuously designated as "a cheap bunch."

Another man who did not belong to the "cheap bunch" was Albert Young of the Coal Teamsters' Union. In the affair involving Young, J. C. Roth, manager of the Great Northern Hotel, proved to be an "easy mark." He paid $1,000 because the coal teamsters, during the engineers' strike, threatened to shut off the coal. Driscoll handled the money, and the officials of the union pocketed it. There was, as Driscoll learned afterwards, never any danger of a strike, although Albert Young and his associates frightened Mr. Roth into believing that there was.

A further detail of Driscoll's operations is worthy of note. One of his important duties as a strike-settling expert was to employ a good healthy "wrecking crew." This crew would, when policy demanded, attack non-union workmen. But with equal zest and impartiality it would, under orders, maim or kill a union man himself, one of the Lord's anointed. If a labor leader had received money to settle a strike, but was unable to persuade his followers to give up, he had recourse to the wrecking crew. "There was," asserts Driscoll, "many a strike picket who suffered when a labor official, without being able to call off a strike, had given his tacit consent to the 'clearing of the alleys.'" To continue in Driscoll's own words:

> "After the union leaders had been 'fixed,' we started at it. 'Clearing the alleys' means putting out of business the pickets who may have had orders to prevent teamsters from driving loads to struck houses. We didn't pay any attention to those orders, because we had the wink from the union officials. I had men to see that the alleys were cleared, and if the pickets didn't obey the instructions of my 'wrecking' crew, they had their blocks [heads] knocked off."

This is, we believe, as low a depth of treachery as any labor leader has yet plumbed—not only to sell out your followers, but to deliver them over to the violence of your own hired thugs.

Even Driscoll had his code of honor. He indignantly denied that he had ever "given money to start strikes or to manipulate them in certain ways." In the New York building trades, be it remembered, the ethical code was not so exacting. If a construction company was having difficulty in completing a contract on time, the simple remedy was to pay a labor leader a suitable fee, have a strike called on the work, and then offer the strike as excuse for the failure. A convenient way, also, to clear your rivals out of the alleys here in New York was to knock their blocks off by persuading their men to strike. In fine, the field for the activities of a strike expert in any large city is practically boundless. To quote again the precious words of Mr. Driscoll, "the game of labor commissioner, one to which few men are adapted," is "perfectly legitimate in view of the rotten condition of the labor market."

Nothing is easier than to denounce the baseness of men like Parks, Weinseimer, and Driscoll. They are the real enemies to labor unions; compared with them, the various associations of employers, formed in every part of the country to fight unionism, are positively friendly. For the Parkses and the Driscolls cast discredit upon the whole movement with which they are identified; they throw suspicion upon every strike, and give color to the sweeping accusation that all labor leaders are blackmailers. No strike, as experience has proved again and again, can succeed unless it win public sympathy. In Chicago, however, these confessions and recriminations will for a long time make it impossible for any union to command popular support unless it is protesting against some extraordinary and palpable injustice. The cause of downtrodden labor, as the eloquent agitators term it, has received a smashing blow.

But Driscoll and the "cheap bunch" whom he "squared" from time to time are not the only actors in this sordid tragedy. From Driscoll and his rabble one cannot expect high intelligence and a delicate sense of propriety. They were out for ill-gotten gain as frankly as any vulgar stock-jobber. Back of them stand eminent business men, who cannot plead as excuse either poverty, ignorance, or criminal training. For every blackmailer there is a man who will pay blackmail; for every bribe-taker, a bribe-giver. It takes two to make a corrupt bargain as well as an honest one. Driscoll could, according to his own admission, have accomplished nothing had it not been for the kindly coöperation of W. T. Brownridge, once president of the National Wholesale Tailors' Association, certain officers of the National Biscuit Company, J. C. Roth of the Great Northern Hotel, and others of equal standing. These gentlemen, models of commercial integrity, joined hands with an avowed corruptionist in a conspiracy against both labor and capital.

THE PAUL MORTON CASE.

It is now officially admitted that Judson Harmon and Frederick N. Judson, the two distinguished lawyers employed by the Government to investigate the giving of rebates by the Atchison, Topeka and Santa Fé Railway to the Colorado Fuel and Iron Company, have withdrawn from the case because of dissatisfaction with the attitude of the Attorney-General. Put in plain language, they have declined to continue their researches because they consider that the Government, by not giving them a free hand, has broken its faith with them. The bone of contention is Paul Morton, whose service as Secretary of the Navy terminates in another week. It is understood that Messrs. Judson and Harmon—the latter a warm friend of Mr. Morton's father, with whom Mr. Harmon sat in President Cleveland's second Cabinet—wish to prosecute Mr. Morton for giving secret rebates, and that the exponents of the "square deal" at Washington are not in favor of this procedure.

Since the Attorney-General, Mr. Moody, is now trying to come to an agreement with Messrs. Judson and Harmon upon some form of statement, we have no desire to prejudge either his action or that of Mr. Roosevelt. The hour has, however, come to present the facts in this case precisely as they are, and review without bias the actual charges against Mr. Morton. It is hardly neces-

sary to do more than point out that the incident is fraught with danger for a President who has justly acquired of late a very enviable renown for his readiness to prosecute not merely the "bad" Trusts, but all corporation offenders. His zeal in this direction has made him appear to thousands upon thousands of citizens a knightly defender of the rights of the people, ready to break innumerable lances in their behalf upon the armor of the Trusts and corrupt public-service corporations. If it should appear, therefore, that he was unwilling to expose a member of his own official family to deserved punishment, the disappointment in him would be widespread and great. Not even his well-known loyalty to his friends would excuse a failure to deliver Mr. Morton to the prosecuting authorities and the courts. It would, moreover, increase the doubts as to his earnestness in fighting for the rate-making power which are apparent in diverse quarters since the practical admission that there is to be no extra session of Congress for that purpose.

In his statement of Thursday Mr. Moody admits that there is a "point of difference" between his investigators and himself. But there can be no difference of opinion as to what Mr. Morton's offences were, because they were proved by his own testimony before the Interstate Commerce Commission. His statements and those of other officials who were concerned led to such an outburst of protests from the entire West that there was nothing for the Government to do except to proceed with a view to punishing the guilty. Testifying before the Commission in Washington on December 19, 1901, in regard to a certain contract, Mr. Morton said, under oath: "Yes, sir, it was an illegal contract. It was illegal when we made it, and we knew it." A year previously this same witness had said to the Commission: "I think the corporation should be fined whenever it grants a rebate, and the shipper should be fined and forced to disgorge what he had received." A year later, in 1902, this same Paul Morton, then vice-president of the Santa Fé, was in especial charge of freight traffic. His subordinate, W. P. Biddle, freight-traffic manager of the Santa Fé, admitted last January on the witness stand that he had given a rebate on coal shipped by a certain company. Mr. Morton openly defended his subordinate, saying: "What Mr. Biddle did was exactly right in my judgment. Everybody did just as we did, and they had to, or go out of business." Commissioner Prouty characterized this action as "a barefaced violation of the law."

But these samples of Mr. Morton's unblushing activity as a law-breaker do not complete the indictment. In 1902, his brothers, Joy and Mark Morton, owned a salt mill in Hutchinson, Kansas, part of the Trust known as the Hutchinson-Kansas Salt Company, which decided to freeze out its independent competitors by obtaining special freight rates. The Mortons were the men of the hour; they had previously built sidetracks and switches less than a mile in length, to connect their mill with the Atchison and the Rock Island Railroads. Joy and Mark Morton sold to themselves these sidings for $8,000, and formed the Hutchinson and Arkansas River Railroad Company. Without being possessed of a single car or a locomotive, they applied to Brother Paul for a traffic agreement—and got it. A few months later this fake railroad received $15,301.39 as its share of the freight rates, although the salt from the Morton mill was "billed in the same way, was taken out by the same engine, was transported in exactly the same manner, as it had been." Thanks to this clever scheme, the Morton mill had an obvious advantage over the independent mills.

Now, to allow such a plain violation of the law to escape punishment would be bad enough from the point of view of the Administration, but it would be even worse from that of the people. It would confirm a very widespread belief, particularly strong in the West, that a corporation rascal can escape every time where a small thief gets a long term in jail. Our Hydes and Alexanders go scot free after abusing their positions of trust; it is the Equitable clerk who steals $27,000 of the policyholders' money who finds himself in jail. As we have frequently pointed out, all the Trust prosecutions in the world will not reach the real evil if the men behind them, those who violate the laws, grant rebates, take unfair advantages or corrupt public officials, are to go free. When that eagerly desired day comes on which a corporation officer goes to jail for something less than cracking a safe, the common people will begin to feel that there is, after all, justice in America, and that the law is at last catching up with the new type of law-breaker whom District Attorney Jerome described so well last week. Mr. Jerome cannot make his correspondents believe that the acts of men in the management of the Equitable differ essentially from those of Larry Summerfield, confidence man. Mr. Moody will have to exert all his great ability to make such honest if out-of-date people appreciate his reason for differing with Messrs. Judson and Harmon as to his duty to prosecute the avowed law-breaker Morton, associate of Presidents and financiers.

THE BRITISH COLONIAL CONFERENCE.

To understand the recent outbreak against Mr. Balfour in the House of Commons and to judge the reiterated charges of bad faith brought against him by Unionist journals like the *Spectator*, one must examine his attitude towards the proposed colonial conference on the fiscal question. Mr. Chamberlain, in his famous Birmingham speech, assuming that the colonies all desired a closer union, urged that a conference should be called to fix a basis for Imperial reciprocity. He held, practically, that only by this means could Parliament at once learn the depth of Imperial sentiment and secure a mandate for specific legislation. Amplifying this idea, Mr. Balfour has always maintained that, until the colonial conference should meet, Imperial reciprocity, while regarded by the Government with benevolent expectancy, was not and should not be a party policy, nor even a subject of Parliamentary comment. This view that the fiscal question had no immediate importance, Mr. Balfour has carried so far as to require the majority to leave the House whenever that issue is raised by the Opposition.

Moreover, he had formulated his programme of fiscal Fabianism in the now famous promise of two elections: first, the country was to vote whether or not it desired to call a colonial conference on the preferential plan; next, it was to vote on any recommendations such a conference might make. At this project of reciprocity by stages Mr. Chamberlain has always looked askance. He has expected to be beaten on an appeal to the constituencies, but to come in triumphantly, after a short interval, over the bodies of the demoralized Liberals. Mr. Balfour, on the other hand, has assumed that he could win the next two elections, and his determination to resign before he so much as called a conference has given a certain logical color to his otherwise grotesque contention that the most discussed matter of the day is of no immediate concern to Parliament.

But when Mr. Balfour promised not to call an especial conference before a general election, he had clean forgot that there was a regular colonial conference, adjourned since 1902, which would naturally convene in 1906. To let this regular meeting of colonial premiers slip his mind was, if strange, at least explicable. The conference of 1902, which passed mild resolutions recommending Imperial reciprocity, has been, in a sense, Mr. Chamberlain's private affair; it had been of rather little importance in the public eye until Mr. Chamberlain had magnified its amiable endorsement of his schemes into an urgent mandate. But once the conference of 1906 was recalled to Mr. Balfour's mind, what was he to do about it? By obtaining a reëlection before it convened he might fairly accept its decision in lieu of that of a special conference. Otherwise, he was bound either not to call the stated meeting or to exclude the fiscal issue from its deliberations. It was at

this point that Mr. Balfour's way became devious: far be it from him either to fail to call the regular conference, or to limit in any way the topics which might come before the representatives of free British colonies.

It was this decision, or the credible rumor of it, that let loose pandemonium in the usually decorous House. On all sides it was felt that Mr. Balfour had proposed a game of "heads I win, tails you lose." For of what avail would it be to promise that the next election should turn merely on the question of convening a colonial conference *ad hoc*, if meantime the regular conference of 1906 should make a vigorous pronouncement in favor of the Chamberlain plan? In other words, Mr. Balfour was suspected, and justly, of maintaining his attitude of philosophic doubt on fiscal matters only until circumstances should cast the die, and he was roundly charged with postponing the issue for two elections, while fully conscious that the conference of 1906 might automatically and inevitably make the fiscal issue the storm centre of the next election. And, in fact, how could that contest be purged of fiscalism? Speaking before the National Union of Conservative and Constitutional Associations, in Albert Hall, June 3, Mr. Balfour thus taunted the Opposition: "Do they mean to treat with contempt the oft-expressed wish of our mighty children—Canada, Australia, South Africa? Do they mean, without examination, without consultation, to reject the overtures that have been made to us?" The very phrases are Mr. Chamberlain's, and when they are repeated by a thousand orators on the hustings after the colonial conference of 1906, it is easy to see what pledges that the fiscal issue cannot enter into the contest will be worth.

It is the sense that Mr. Balfour promises one procedure while confidently expecting to be forced into another, that lends bitterness to charges of bad faith, and utterly deprives of value such pledges as Lord Lansdowne made the other day in the House of Lords. He said that the Government most certainly would not lay before the country any conclusions regarding the fiscal question reached by the colonial conference of 1906. If the Government were returned to power at the next general election, it would summon a special colonial conference to discuss preference, and the conclusions of that special conference would be laid before the country. Here is the familiar dogma of two elections in its full form, subject only to the modification that the conclusions of the colonial conference of 1906 may insist on laying themselves before the country. In which case Mr. Balfour and Lord Lansdowne would be absolved from their promises much as an express company disclaims responsibility for non-delivery due to "the act of God."

How equivocal this attitude is, will be perceived when it is recalled that there is no obligation to convene the conference of 1906; in fact, it would be inexpedient to have it discuss partially and unauthoritatively matters which are to be handled more fully by a special conference representing the entire Empire. First to forget the regular conference completely and then to be willing to use it as a *ballon d'essai* to find how the fiscal wind blows, is more creditable to Mr. Balfour's openmindedness than to his ideals of political fair dealing. The straight course would be either to omit the conference of 1906 or invest it with plenary capacity and go to the country before it meets. As things stand, Mr. Balfour is a good deal in the position of a judge who appoints a trial spin prepared to declare it a genuine race if his favorite wins. The general suspicion that he is not playing fair must hurt him, and the Liberals surely have no occasion to regret a vacillation that may hasten an election on the fiscal issue. The capture of nineteen Unionist constituencies in the past three years, and the regular increase of Liberal majorities in bye-elections, show the prevailing sentiment against protectionism.

GERMANY AND HER SUBJECT RACES.

It is not merely in Southwest Africa and in her other distant colonies that Germany has to deal with subject races. Within her own borders she has been struggling for decades to absorb the French in Alsace-Lorraine, the Danes in Schleswig-Holstein, and the Poles in Prussian Poland. All of these territories came to her through the sword, and, in all, the existing conditions go far to bear out the maxim that war solves no questions. The French are still hoping to become once more a part of the Republic; the Danes, with no expectation of becoming subjects of Denmark, cling obstinately to their language and customs; while among the Poles the desire for a separate nationality is if anything keener than in the days of Kosciusko. It matters not that millions of Poles are Russian and Austrian subjects. The 3,500,000 to 4,000,000 Poles who owe allegiance to the Kaiser, have so obstinately refused to be absorbed that the Government not only finds itself compelled to use force to maintain the German language in the public schools, but has actually spent many millions of marks in an effort to drive out the Poles by acquiring their lands.

How keen this struggle for the soil has been is well described in the *Contemporary Review* for June by Emil Givskov. As his name indicates, this writer's point of view is not that of a Bismarck or a Von Bülow, yet he has not brought out the intense bitterness which this century-old struggle has created in Germany, or pointed out that defection from the Government's policy of gradual expropriation of Polish landowners is all but equivalent to high treason. When it became known the other day that Lieutenant-Colonel von Keszycki, commander of the historic Zieten Hussars, had sold his great estate in Posen to Poles, there was at once an uproar throughout Germany which has seriously endangered that officer's military future. The Nationalist newspapers were particularly furious because this was the third case within a couple of months of such a sale by persons supposedly loyal Germans, who are now accused of selling out their country's interests for thirty pieces of silver. In each of these cases they could have sold their property to the German Land Bank, which represents the nationalization movement, at a slightly smaller price, but their patriotism was not sufficient to make them welcome the sacrifice.

The sharp-witted Poles have not only maintained and extended their positions in Posen and West Prussia, but have actually taken the offensive by purchasing forty large estates in Pomerania. Even in Upper Silesia they are buying and parcelling out great estates. Yet Bismarck, when he began aggressive measures against the Poles by expelling 50,000 Polish laborers, thought he had dealt a staggering blow to the Polish landowners. The resultant scarcity of labor did ruin many holders of large estates, and Bismarck seized the opportunity to appoint a committee on colonization, armed with $20,000,000 for the purpose of acquiring large tracts and reselling them to settlers from other parts of Germany. This committee met at first with great success; but gradually, as the proprietors sold out, they put their money into the Polish land banks, of which there were soon a large number. After a while these banks were able to buy farms for Polish peasants quite as fast as the German committee succeeded in getting estates from the landholding class. When the committee's first twenty millions were expended, it was given twenty, and finally fifty millions additional. By January 1, 1904, it had bought up 405 estates and 226 peasant farms, and an area of 726 square miles. A German population of 49,000 has actually been settled on these lands, one-half of which have been parcelled out for nearly eleven millions of dollars. In addition, the committee has built 25 churches, 17 chapels, 24 dwelling houses for the clergy, 177 schools, 191 municipal and 497 private buildings, among them many inns.

Impressive as this showing undoubtedly is, Mr. Givskov is able to offset it by a few official figures. Thus, while the Germans, in the years 1896 to 1901, parcelled out 7,828 estates, containing 617,-

200 hectares, the Poles have distributed 9,079 estates, containing, however, only 213,700 hectares. While the Germans have thus resold more land, the Poles are ahead in the number of new farms created, 6,000 more Polish homes having been erected than German. In the last two years this lead has been proportionately increased, because the Pole is ready to become a peasant farmer, while the average German wants more land and more comfort than his rival. Thus the average German farm comprises twenty-six acres, while the Polish contains only twelve. Finally, this peaceful warfare for a country is illuminated by the fact that the Germans have acquired 3,772 estates from Polish owners, who have, however, turned the tables by buying up 5,188 estates from Germans. The latter have in this way actually lost possession of 128 square miles in the years 1896 to 1902 inclusive. It is needless to add that this extraordinary contest for the land has sent prices up in a remarkable manner, from an average of $60 per acre in 1886 to $115 in 1903.

Forty years have elapsed since Germany annexed the Danish provinces. Yet, if Mr. Givskov's figures are to be trusted, she has made very slight progress in Germanizing her most northern subjects, there being actually more farms owned by Danes and fewer by Germans to-day than in 1864. Like their Polish fellow-citizens, the Danes, moreover, insist upon retaining their language and national characteristics, and even induce the few German immigrants to learn Danish. This fact is the more surprising in that the Danes are forced to serve three years in the German army, during which time they are supposed to acquire German speech and habits of mind. Only in the towns is the German influence growing. All this is, of course, in remarkable contrast to the readiness with which the United States makes over its immigrants into good Americans.

A CLEARING-HOUSE FOR ART.

We have received from Chicago a circular bearing the ambitious title, "On the Ideal Relations of Public Libraries, Museums, and Art Galleries to the City." It is compiled by Dr. O. C. Farrington, representing the Chicago Library Club, and it recommends the formation of an advisory paid commission, consisting of officers and directors of public libraries and museums, which shall consider all matters of common interest and policy and gradually "find its own powers." Now, this plan may or may not be the best, and it may or may not be accepted by the city government, but it is evident that there is a common ground between art and literary institutions over which a joint commission might exercise a very salutary jurisdiction.

Under the present arrangement, or lack of it, there is constant overlapping and waste. For example, until, of late years, the Metropolitan Museum set up its own reference library, any visitor who desired information of a special sort on its exhibits was obliged to go either to the Astor Library, the private Society Library, the Avery Library, or that of one of the literary clubs. Similarly, a student of the applied arts might well be in doubt whether to begin work at the Cooper Union or at the Metropolitan Museum, while a collector drawing up his last will and testament to-night may not know so elementary a principle as that textiles should go to the Cooper Union, and wrought iron and ancient glass to the Metropolitan Museum; or that prints and engravings should be given not to any of the art institutions, but to the Public Library, which, in the Avery collection of modern etchings, and in collections of historical subjects and of Japanese color wood-cuts, has an admirable beginning of a department. Returning to the student's point of view, it will possibly surprise many amateurs to learn that the fascinating subject of barbaric design must be studied in New York, not at any of the art museums, but at the Natural History Museum, which has instructive collections in Orientalia, as in primitive archæology generally.

In part, such illogical dispersion and duplication is merely an inevitable effect of individualism in men and institutions. Donors are guided largely by personal acquaintance and predilection; institutions are seldom magnanimous enough to decline or divert into logical channels valuable gifts which lie aside from their proper work. In a matter so essentially temperamental as collecting and bequeathing works of art, no organization will ever wholly eliminate caprice, but an intelligent committee might at least define the proper functions of its constituent libraries and museums, might set up an ideal to which private benefactors would gradually approximate, and, by the exchange of loan collections, or, where conditions permit, by actual purchase or barter, might do much to reduce to order a group of institutions that have "jest growed." Such a board, since our museums and libraries are mostly of a half-private nature, could probably have no official standing, and would exercise very limited powers, but it is a matter in which intelligence and good will may easily gain the weight of authority without its invidiousness. By degrees a kind of friendly compact might do away with harmful duplication and competition. In short, a museum and library board might fairly hope to accomplish in the field of art that useful work as a clearing-house now effected in the field of philanthropy by the Charity Organization Society.

We need emphatically a more plentiful supply of general ideas in matters artistic. Take the case of the Metropolitan Museum—not because it is exceptional, but because it is more striking: At present it falls, in its contents and policy, somewhere between the National Gallery and the South Kensington Museum. It is building up a collection of choice articles chiefly for purposes of human delight, and it is assembling heterogeneous, if comprehensive, collections chiefly from the point of view of historical study and of practical design. These aims are in a measure incompatible; at least they require clear perception and judicious recognition in the arrangement of galleries. Evidently it would be unfortunate for the Museum haphazardly to make all art to be its province, in disregard of the parallel activities of the great libraries and museums of the metropolitan district. It might turn out that a far greater specialization than at present exists is desirable; that the rough division between the fine and industrial arts which is strictly and successfully observed at Berlin and less stringently in London and Paris, would be expedient here also. One may conceive, for example, that the field of the applied arts might with advantage be left to institutions like the Cooper and Pratt, where these exhibits are immediately serviceable to the artist artisan, and not less available for the student and art lover. And if testamentary conditions stood in the way of actual transfer of exhibits, there could be no obstacles to loans—for long periods.

Short of such radical readjustment, it would do the officers of our libraries and museums much good merely to know what the others are doing, and a body that expressed the best judgment on art matters would have abundant *raison d'être*. We have no doubt that, from the present personnel of these institutions, a board could be chosen which would soon acquire an influence corresponding to the unquestioned scholarship and sagacity of its presumptive members.

MAZZINI'S CENTENARY.

CAMBRIDGE, MASS., June 18, 1905.

The wise instinct of the world has long since admitted Joseph Mazzini into the company of its great men. He would certainly be included, along with Cavour and Bismarck, Lincoln and Emerson, in any group of half a score representatives of the nineteenth century. For forty years he embodied the European Revolution—a monster to some, a model or a martyr to others; but as soon as death removed him as a living menace, his foes conceded his eminence. To-day, his great book, 'The Duties of Man,' is a text-book in every Italian school. Time has done for him what it does for all rebels—it has stripped off the temporal and left the permanent. And at last we see that—unlike those rebels who combat a special abuse and, when that abuse falls, have no further significance—Mazzini belongs among the little band of world-benefac-

tors whose rebellion is rooted in the everlasting conflict between Good and Evil. Thus there are two Mazzinis—one who worked for his contemporaries, the other who worked for posterity. In the case of no other man of equal rank is it so necessary to distinguish clearly between the two. This we can now do without fear of misunderstanding.

Glance first at the *temporal* Mazzini. He was born in Genoa, June 22, 1805. At sixteen, the sufferings of the victims of a futile revolt burnt into his soul. The vision of freedom, and of its responsibility, haunted him. "I felt," he says, "that since we could, we ought to struggle for freedom." Ten years later he was imprisoned for many months, not for any overt act, but simply because the police had marked him as a "thinker." During his confinement, he systematized the principles to which he consecrated his life. He issued from prison only to be banished. At first from Marseilles and then from Switzerland he directed Young Italy, the society which sprang up at his call to free the Peninsula. He led an invasion into Savoy, which collapsed almost without firing a gun (1833). He was ridiculed, accused of betrayal, persecuted; and at last, at the instigation of foreign governments, Switzerland drove him out, to find refuge in London. There, in almost beggarly condition, he carried on his revolutionary propaganda, terrifying the Continental cabinets, planning fruitless insurrections, cheering the oppressed, and creating, not in Italy only, but throughout Europe, multitudes of disciples who pledged themselves to his ideals.

He could never cancel the stigma which his foes early branded on him of countenancing assassination, nor did he escape the charge of personal cowardice. As to the first, opinions still differ, and, in spite of his own avowals and those of his intimates, probably they always will; but the charge of cowardice, based on his practice of sending his followers on errands which proved deadly, may well be dismissed. He risked his own life over and over again on secret missions to Italy, and no man who bore himself as Mazzini did during the perils of the Roman Republic in 1849, lacked either fortitude or courage. Those brief months of practical dictatorship tested his ability to *do*, and although he inevitably failed, he showed both decision and foresight. Thenceforward, he fell back on conspiracy, only to be more and more discredited as his plots at Milan, at Mantua and at Genoa were smothered in blood. When Garibaldi freed the Two Sicilies, Mazzini hurried to Naples and begged the hero to organize his conquest on a Republican basis, but Garibaldi fortunately followed his own intuitions, which were usually much sounder than his reasons. So far as Italy was concerned, Mazzini ceased to be an important political factor after 1860, and, during the last ten years of his life, he saw other men, with new aims, turn aside the course of the Revolutionary Party in Europe, of which he had so long been the head. Nihilism, Anarchism, aggressive Socialism, the International, were symptoms that—speaking broadly—the Revolution had begun to pass from a strictly political to an economic and industrial stage. Mazzini himself took no satisfaction in the independence and unity of Italy, because he believed that the monarchy would vitiate the good that had been achieved. To Daniel Stern he wrote: "Little it matters to me that Italy, a territory of so many square leagues, eats its corn and cabbages cheaper; little I care for Rome if a great European initiative is not to issue from it. What I do care for is that Italy shall be great and good, moral and virtuous, that she comes to fulfil a mission in the world." So to the end he remained officially a rebel; but Victor Emanuel's Government winked at his last visits to Italy, where he died incognito, on March 10, 1872.

Stated thus briefly, Mazzini's active career seems a failure. Externally no doubt it was. Not one of his immediate purposes bore the fruit he desired. At his death, his enemies possessed the field from which they had driven him. But, in a larger sense, he was victorious. He equipped more regiments than his adversaries knew for the unification of Italy. The life-long conspiracies in which Mazzini engaged, and which sometimes seemed to him, as they did to his contemporaries, to be his chief business in life, now turn out to belong to the transient part of him; while his immense moral energy, his obedience to ideals, and his almost unequalled genius for bringing ideals within reach of the masses, constitute his permanent greatness. The harm which he did through abortive uprisings is patent, but the good can never be measured, for it is impossible to follow the course of his regenerative influence into the myriads of hearts that he aroused. What George Meredith said many years ago, and Swinburne sang in his noblest poem, is literally true:

"But this man found his mother dead and slain,
With fast-seal'd eyes,
And bade the dead rise up and live again,
And she did rise."

Until Mazzini founded Young Italy, conspiracy had wholly a political character; he quickened it with moral aspirations. We must remember that conspiracy was the only means by which, after Waterloo, European Liberals could make their desires known; for they had neither free speech nor free press nor any voice in the government. The French Revolution, to which the downtrodden masses looked for an example, had magnified the Rights of Man; Mazzini preached the Duties of Man. He purged patriotism of selfishness. He taught that political liberty and independence must be striven for, because through them alone could every individual grow to his full stature and play a serviceable part in society. But while Mazzini wisely recognized that the individual is the cornerstone, he was no Individualist. "Collective Humanity" was his ideal—a world in which each nation, state, town, and citizen should be striving for the common welfare of the race, all exercising to the full their special energies. He would have neither Socialism, with its levelling and its strait-jacket for every talent, nor Anarchism, with its insatiate selfishness. Into the warfare between Labor and Capital he projected moral considerations. That conflict will never be settled, he held, by any mere arrangement patched up by economists. Wherever two human beings meet, no matter in what relation, there conscience joins them; and you cannot, by calling them employer and employee, settle their grievances by the economic law of supply and demand instead of by human justice and sympathy.

It would be impossible to exaggerate what Mazzini's religious awakening meant to Italy, where the Church had long since ceased to have any hold on the intelligent classes, and where it ruled the peasantry through ignorance and superstition. At most, the Church operated an apparatus of ritual, which had little to do with either true piety or noble conduct. Mazzini made his appeal directly to the individual soul. He showed the moral issue of every act, public and private. With terrible sincerity, he brought the institutions, practices, customs, and aims of the age to a Day of Judgment where Duty judged them. Duty and Fellowship—those are the words oftenest on his lips, the ideals whose beauty and majesty he celebrated throughout his life. "The earth is our workshop," he wrote; "we may not curse it, *we must hallow it.*" And again: "God will not ask us, 'What hast thou done for thine own soul?' but 'What hast thou done for the souls of others—the sister-souls I gave thee?'"

He addresses his message not to Italians only, but to men and women everywhere. It is as plain now that Mazzini was the greatest moral force in Europe during the nineteenth century, as that the world has scarcely begun to draw from him the benefits which he has to bestow. As long as he lived and was spending his energy on special enterprises, he seemed a partisan, a fanatic, an incendiary. His enemies thought that the failure of his concrete experiments discredited his principles. Now the mortal part of him has dropped away, and through those principles he will help to shape the new generations. He lives not so much by his specific teachings in politics, in social and industrial reform, in art, in literature, and in religion, as by the spirit in which he taught and by his power to stimulate and to spiritualize.

We need only to compare Mazzini with his contemporaries in the Party of Revolution in order to see how he surpasses them in significance to-day. Ledru-Rollin, Schoelcher, Louis Blanc, are scarcely more than names for our generation; Victor Hugo, the sublime rhapsodist, the inexhaustible improviser, with his colossal vanity and his pageant of rhetoric, seems now, even in his sincerest utterances, to be declaring the glory not of God, but of Victor Hugo; the grave, high-minded Herzen worked only to cure Russia's malady; Kossuth, with his magical eloquence and fiery courage, had no general message; Lasalle was fascinating, but mankind is too healthy to date a new era in its progress from a man who was killed in a duel over a courtesan; Marx, whose doctrines have had the widest vogue during the past thirty years, is essentially a materialist, a ponderous German pedant, whose remedies, if they could take effect to-morrow, would leave unsolved the fundamental human problems; even Lamennais, impassioned and sympathetic, touched but an arc of Mazzini's circle.

We must go back to Dante to find an Italian who had, like Mazzini, the combination of vivid practical intellect with a highly sensitive, even mystical, spirituality. Dante, too, plunged into political affairs, and would have reformed the abuses of his time; he, too, conspired, was banished, seemed beaten. Between him and Mazzini came Savonarola, akin to them in his fierce onslaught on iniquity, and in his apparent failure; but

compared with them he is circumscribed in genius and local in scope. As Dante spoke for the mediæval world, so Mazzini is thus far Europe's most authentic spokesman of the ideals and hopes of our new epoch. Had he not been a prophet, he might easily have taken a very high place in literature. As it is, he has left some of the profoundest literary criticism, besides political and ethical treatises of the first rank, and an extraordinary volume of living correspondence.

The beauty of Mazzini's private life reinforces all his teachings. The world, let it be never so hostile, cannot resist the argument of self-sacrifice. The lapse of time sanctifies his forty years of exile—the poor lodgings, the unstinted helpfulness, the sympathy with the joys and griefs of all with whom he had to do. He renounced home, family, even marriage, for the sake of the apostolate to which he dedicated himself. He bore up against all defeats, and conquered the desperate doubts which, in moments of reaction, rose to tempt him. One remembers his bringing up the coal for his feeble landlady, his sharing half his small earnings with strangers, his night school for the Italian bootblacks and organ-grinders in London, his attack on the "white-slave traffic." One remembers, too, his rare capacity for friendship—witness the sweetness and delicacy of those letters of his to Jane Carlyle in one of her fits of wifely jealousy. No one, it seems, could escape the spell of his presence—the spell which he imparts through his life and writings to those who never saw him. Some time ago I urged the person who, I believe, is best qualified, to give us the adequate biography of Mazzini for which the world still waits, and the reply came to me, "I cannot—I revere him too much!" That feeling of reverence comes to every one who penetrates to the heart of Mazzini's life-work.

"Dark with strife,
Like heaven's own sun that storming clouds bedim,
Was all his life.

"Life and the clouds are vanish'd; hate and fear
Have had their span
Of time to hurt, and are not: He is here,
The sunlike man."

WILLIAM ROSCOE THAYER.

CLASSICAL STUDIES IN ROME.—II.

ROME, April 30, 1905.

Leaving out of account the University of Rome, which has a complete faculty of arts and sciences, certain characteristics of the foreign establishments deserve consideration. It will have been perceived from what I have already said that the German Institute is of the four the most strictly limited to the study of classical archæology. From its organization, statutes and publications, I cannot discover that it has any other object than the study of ancient monuments and topography—that is to say, of archæology in the strictest sense of the term; as was perhaps to be expected from the German tendency to specialization and to the formal subdivision of the field of knowledge. The French and British Schools are the most liberal in their scope, excluding nothing that pertains to Italian civilization in any period. It should be observed, however, that the French institution, which offers no lectures and apparently never intends to do so, expects the student to be something of a specialist when he comes. The American School appears to occupy a somewhat medial position between these extremes. Its statutes call for "the study of classical literature in its bearing upon antiquities and history," but appear not to contemplate a study of classical literature in general. The art and archæology of the early Christian, the mediæval and the Renaissance periods are also provided for, but it is noticeable that nothing is said about the literature or history of any of these epochs. Another circumstance that must always be borne in mind was pointed out in the columns of the *Nation* a number of years ago, namely, that whereas the chief object of the other foreign institutions in Athens and Rome has been the training of specialists, usually in archæology, the chief function of the American Schools in both these places has been to provide American students who have already received a classical education, with a general knowledge of Greece, Italy, and their monuments before they should begin their work at home as teachers in schools and colleges.

I now wish to point out (needless to say in no unfriendly spirit) what I consider to be some defects in the methods, both of investigation and teaching, now employed by classical scholars in Rome, and this more especially with reference to the needs of American students. The difference to which I have just adverted between the American School and all the others is easily accounted for by difference of conditions. In the United States there are not many professorships of classical archæology or curatorships of museums, while in France, Germany, and Italy there are such posts in abundance, as well as employment in connection with Government excavations; and such work, though not very lucrative, yet gives a young man enough to live on, and affords him valuable experience in preparation for his professorship or curatorship. This being true, it is certainly not wise for an American student to spend much of a usually brief sojourn in Rome hunting after potsherds and brick-stamps. But even for the non-American students I should like to suggest that the methods of study now pursued are somewhat too restricted and professional. Archæology has by no means said its last word on the monuments that have already come to light; many new discoveries, also, are now being made and will be made in the future. Yet the danger is certainly not remote that archæologists, trained as specialists themselves and so training their pupils after them, will continue laboring in a particular field long after it has ceased to be productive. It has, in my opinion, been partly the misfortune of classical studies in Rome that they have been developed almost exclusively by the archæologists, who often refuse to look at anything unless it is standing in ruins or has been dug up out of the ground.

In other words, I believe that the student in Rome, more especially the American student, who rarely becomes a professional excavator or explorer of antiquities, should devote a considerable portion of his time to the art and literature of the Renaissance and mediæval periods. In support of my contention I am glad to be able to quote the authority of Mr. Norton, the director of the American School, who, in a recent report, strongly urges on his managing committee the undertaking of mediæval and Renaissance studies, and also the requirement from all students of a reading knowledge of Italian as well as of French and German. I would direct attention, however, to the fact that it is doubtful if, according to the present rules of the American School, the study of any post-classical literature be permissible. The regulation I have already cited provides for the study of classical literature only "in its bearing upon antiquities and history," but says never a word about neo-Latin or Italian Literature. I quote this provision not merely for the purpose of criticising it individually, but also as a typical expression of the character of classical studies in Rome; for any scheme which leaves out mediæval and Renaissance art and literature is, in the broad sense of the terms, unhistorical and unphilosophical. In spite of frequent assertions to the contrary, the cataclysm of 476 did not break the continuity of history or of civilization; and a dividing line at this point is quite artificial. Few will deny, moreover, that the ancient Roman culture, considered with reference to the higher and nobler arts, was at once derivative and inferior; and that not the least of its functions was the transmission of those Hellenic ideals which helped to make the Pagan Revival, especially in Italy and England, outvie the highest achievements of the Hellenic spirit itself. And the Middle Ages, so often and so ignorantly dispraised, produced in Dante a universal genius and one of the chief purveyors of classical influence. For presumably it was not merely to devise the pleasing fiction of a personally conducted tour that Dante made Virgil his guide through Hell and Purgatory. Nor did the poet who, with sublime arrogance, placed himself among the greatest of the bards whom his vision saw, idly throw away a part of his own praise in ascribing to the constant perusal of his master's works that beautiful style which had done him honor.

The student, therefore, commits the grossest error who studies in Rome the degenerate Roman sculpture with no attention paid to Italian pictorial and plastic art; or who contents himself with what he has learned of Latin literature, and quits the country of Dante, Petrarch, and Politian completely ignorant of their works in themselves, and of their relation to those literatures of which he is supposed to be acquiring an expert knowledge. I believe that I am upheld by the soundest modern criticism in especially urging the cultivation of Italian literature as most important for the complete training of the classical scholar. For the Italian writers, especially the poets, caught the secret of classical—that is, Hellenic—perfection of form, which English literature, in spite of its unrivalled richness and power, has attained only in exceptional instances.

Two difficulties may be urged against such a broadly inclusive plan of study: defective equipment and lack of time. The former is true only of the foreign Schools, and is fully made good by the University of Rome, where the stranger enjoys the additional advantage of not hearing lectures in his own language. Not only in the Greek and Latin languages and in classical archæology does this institution offer excellent opportunities, but also in such subjects as comparative literature and neo-Latin. All the neo-Latin writers are not to be despised. What

better model can the classical scholar take than Politian, the greatest scholar of his age, the master of Greek and Latin prose and verse, who also perfected one of the most important poetic forms in his native tongue?

A more serious objection may be made out of the second count, that of lack of time, and it will certainly be difficult for the young classicist to include Italian art and literature within the range of his studies, if he goes through the mill of a long post-graduate course, leaving only a few months for a sojourn in Greece and Italy. Thus the question of time involves also the question whether the American student of the present (for it is he that I have chiefly in mind) ought to do most of his graduate work at home. If I, who have lived at five institutions of higher learning in the United States, and have become fairly well acquainted with a number of others, may be allowed to express an opinion, he is usually not wise in so doing, even at universities that have the appearance of being well equipped. After all, a full set of texts and German periodicals does not constitute a complete apparatus for classical study. Apart from the great stimulus that comes from living in the home of an ancient civilization, literature (and especially ancient literature) should be studied where there is a culture sufficiently firm and long-established to have produced habits of thought sympathetic with such pursuits, and to afford a background, as it were, against which the facts of literary history may be seen in proper light and perspective. The places in America of which such qualities may be predicated are so few that it would be invidious even to mention their number. In other words, I believe that a combination of the former habit of resorting to Europe after graduation, and of the recent habit of going to Greece and Italy instead of to Germany, would be the most profitable course for most Americans. Except for the Greek specialist, Italy is certainly the better country for a long residence by reason of the greater continuity of its culture.

Another most important question here involved is that of ideals of scholarship—whether for education the type of the German specialist or of the man of letters be the more desirable. However useful the American graduate schools of the present may be in serving the ends of professional scholarship, there can be no doubt that, with their wearisome grind of seminary and thesis, they are responsible for much of the dull and uninspired teaching that has gone far towards discrediting the study of the Greek and Latin languages. I am far from denying the utility of scholars who devote themselves to minute research, but that the teaching of classical literature in our country should be almost entirely in their hands is assuredly a misfortune.

H. Edmiston.

FONTENELLE.

Paris, May 28, 1905.

"If those whom the gods love die young, as the ancients said, Fontenelle was not among them, as he lived nearly a hundred years." Thus begins a study of Fontenelle which has just taken its place in Hachette's series of "Les Grands Écrivains Français," and which is the work of M. Laborde-Milaà. Fontenelle never complained of being too old, and when, in his later years, his age was alluded to, he used to put his finger on his mouth, and say, "Chut!" so as not to draw the attention of Death. His intellectual development was uninterrupted to the end, and Grimm could well write of him: "Monsieur de Fontenelle, who has just finished his career, was one of those sane men who, after having witnessed for a century all the revolutions of the human mind, have themselves effected some and paved the way for several others." The Fontenelle described by La Bruyère as a pretentious *bel esprit*, was not the philosopher that he afterwards became; his horizon was always widening.

Bernard Le Bovier de Fontenelle was born on the 11th of February, 1657; he was the nephew and godchild of Thomas Corneille, brother of the illustrious Pierre Corneille. He pursued his studies with the Jesuits in Rouen, was admitted as a lawyer to the bar of that city, and, having lost his first case, chose to adopt a literary career. He went to Paris at the age of twenty-three, and we find him in the society of his uncle Thomas, and of the writers of the *Mercure Galant*, among whom were Boursault, Tallemant, and De Vizé, the King's historiographer. He wrote verses for the *Mercure Galant* and cultivated his taste for music and the fine arts, but we see him also manifesting great curiosity for science, which lasted all his life. He became acquainted with Lémery, one of the creators of chemistry; with Sauveur, the geometer; with some of the famous Jansenists; with the Abbé de St. Pierre and Malebranche.

La Bruyère, speaking of Cydias, is thinking of Fontenelle: "Enter his shop; you can choose; prose or verse—which will you have? Cydias succeeds equally well in both." Fontenelle's first literary essays are justly forgotten. M. Laborde-Milaà seems to me too indulgent when he finds some resemblance between his subject and Marivaux; but it gives him opportunity to recall a circumstance very creditable to both of them. When Marivaux was ill, he received a visit from Fontenelle, who said to him: "My friend, in your situation people may have need of money; true friends ought not to wait till they are asked for it, their hearts can understand. Here is a purse of a hundred louis which I leave at your disposal." "I consider the purse received," answered Marivaux; "I have used it, and I return it to you with all the gratitude which such a service demands."

The 'Dialogues des Morts' appeared between 1682 and 1684, and had great success. People were amused at meeting in the Elysian Fields the most unexpected personages engaged in conversation—Alexander and Phryne, the Emperor Augustus and Aretino, Agnes Sorel and Roxelane, Seneca and Scarron, Plato and Margaret of Scotland, Paracelsus and Molière. The Dialogues are very paradoxical and ironical. They abound in maxims, in the style of the famous ones of La Rochefoucauld, La Bruyère, and Pascal: "Being a genius or a fool is determined by the merest nothing, by a little disposal of fibres, by something which the most accurate anatomy could not perceive." There is always an ironical vein in Fontenelle's writings. Take, for instance, what he says about afflictions:

"An imaginary circumstance which it pleases us to add to our afflictions, is the belief that we shall be inconsolable. Not that this persuasion is not sometimes a sort of consolation; it is so in the case of pain in which we can glory, such as that we feel on the death of a friend. Then, to be inconsolable is to prove to ourselves that we do care, are tender, faithful, confiding; it is to give ourselves great praise. But in circumstances when vanity does not sustain affliction, and when eternal sorrow would have no merit, let us beware of thinking that it will be eternal. We are not perfect enough to be always afflicted; our nature is too variable, and this imperfection is one of our great resources."

Fontenelle is never tired of placing intellect on a higher level than sentiment; he has an instinctive prejudice against love, women, marriage:

"Dans les nœuds de l'hymen à quoi bon m'engager?
Je suis un, cela doit suffire.
Si j'étais deux, mon état serait pire;
C'est bien assez de moi pour me faire enrager."

He was all brain. Madame de Tencin once told him, putting her hand on his breast: "It is not a heart you have there; it is brains, as in your head." He would not have approved the famous maxim, "Les grandes pensées viennent du cœur." His poetical work suffered from this absence of sentiment; it was never really poetical.

The qualities of his mind were fairly shown in his critical work alone, in his extraordinary ability as a vulgarizer, an exponent of the scientific discoveries of his time. When he wrote, at the beginning of the eighteenth century, his 'Introduction to the History of the Academy of Sciences,' he spoke eloquently of the revival of mathematical and physical sciences, and of the necessity of concentrating in academies and organized scientific bodies, in all civilized countries, the researches of the astronomer, the physicist, the chemist, the botanist. He felt that between all men devoted to particular branches of science there ought to be a *trait d' union;* he had special aptitudes for uniting scientists with one another and with the public. This was the task of his life. "Scientific work," says Renan, "contains two very distinct parts; the genius of discovery, the work of original research, and the art of rendering them accessible to the public. These two parts can be properly undertaken only by the same person. Science has nothing to gain from interpreters ignorant of its methods and its ways." Fontenelle undertook to become the educator of the general public, of society, in all matters scientific. He was the prototype of a class of writers which became afterwards, especially in our time, very numerous.

His first attempt was the 'Pluralité des Mondes' (1686), which had a great vogue and which can still be read with pleasure, owing to its luminous and agreeable style. Fontenelle imagines himself walking, on a fine evening, in a park, after supper, with an amiable marchioness, his hostess at the time:

"There was a delightful coolness which recompensed us for the very warm day which we had borne. The moon had been rising for about an hour, and its rays, which reached us through the branches of the trees, made an agreeable mixture of a light whiteness with all this green which appeared dark. There was not a cloud to

obscure or to conceal the smallest star; they were all of a pure and shining gold, made more brilliant by the blue ground to which they were attached."

The conversation begins on astronomy, and Fontenelle sets forth the astronomical views of his time on the solar system, the sun, the earth, the moon, the various planets. He does it with a mixture of allusions, citations from Ariosto and Scudéry, criticisms of the older superstitions. This work marked him as a candidate for the French Academy, into which he was received on May 5, 1691. In 1701 he was elected to the Academy of Inscriptions; in 1699, the Academy of Sciences was reconstituted, and Fontenelle became, some time after, its Secretary. In that function, he pronounced the eulogies of deceased members, and made analyses and extracts of the most important Academical works. For this he was admirably suited. The collection especially of his "Eulogies," which all took a biographical form, is a document still preserved and often used. His eulogies of Malebranche, of Leibnitz, of Newton, are among the best known.

Fontenelle's philosophy is found in all his works, but never takes a dogmatic form; it can, however, be expressed in a few words. He was eminently the propagator of the notion that everything in nature is subjected to laws, and that nothing is arbitrary or independent of these laws. He considered, also, that the sciences interpenetrate and are connected together, and are really only the particular aspects of a unique and universal science, which is nothing else than the coördination of all phenomena by mathematical rules. We thus see in him a successor of the famous Descartes; he was also a great admirer of Newton, and, in his eulogy of him, written in 1727, he draws a very fine parallel between these two great masters of thought. "Both of them," he says, "were geniuses of the first order; . . . both of them were excellent geometers and saw the necessity of carrying over geometry [this word was used at the time for the mathematical sciences] into the physical sciences." M. Laborde-Milaà says justly, at the end of his work, that "for more than sixty years Fontenelle was one of the masters of French thought, and formed with Montesquieu and Voltaire a glorious trinity. He witnessed the revolution of ideas, and took his part in it with honor." He died on the 9th of January, 1757, in his house in the Rue St. Honoré, in Paris.

Correspondence.

A PETRARCH CONCORDANCE.

To the Editor of The Nation:

Sir: The concordance of the minor Italian works of Dante, prepared by members of the Dante Society, is now in the hands of subscribers. In view of this fact, and of the interest in Petrarch stimulated less than a year ago by the celebration of the six-hundredth anniversary of his birth, the occasion seems suitable for announcing that the undersigned has begun the preparation of a concordance of Petrarch's 'Canzoniere,' and hopes to publish it within a reasonable time. Kenneth McKenzie.

Yale University, June 17, 1905.

THE LOTTO PORTRAIT.

To the Editor of The Nation:

Sir: Permit me a word regarding the portrait by Lotto, in Vienna, of a man in three aspects, referred to in your issue of May 18. You accept my friend, Mr. Kerr-Lawson's view, recognizing the person represented as Lotto himself. This painter was born in 1480, and the picture in question bears every internal proof of having been painted no earlier than 1530. We should therefore expect the likeness of a man of fifty. But we have a man of thirty, or thirty-five at the utmost, who thus cannot have been Lotto. B. Berenson.

I Tatti, Settignano, Florence, June 4, 1905.

Notes.

'The American Catalog 1900-1905' (New York: Publishers' Weekly) makes a volume in excess of 1,200 pages, but octavo in form in place of the stately and more elegant quartos of 1876-1900. The date 1905 is exclusive; but some books so stamped, though actually printed in 1904, are included. Government and State publications are now disregarded. The second part of the old Catalogue, arranged per subject, is merged, in the present scheme, under one alphabet with the authors. Yet intimation is given of a possible supplementary volume composed of the Weekly Record of the *Publishers' Weekly*, with descriptive notes, arranged in yearly alphabets. If we cannot praise the linotype for its mechanical beauty in this instance, its aid to bibliography ensures full condonation.

In 'Half-Hours with the Lower Animals' (American Book Co.), Mr. C. F. Holder has endeavored to prepare a "popular combined review and supplemental reader, on the lower forms of animal life from the Amœba to the Insects, inclusive," with abundant illustrations in the text. In too many cases the adjective "popular," in connection with books on natural history, signifies "sensational and inaccurate." Mr. Holder, however, is not a mere compiler, and while his style is vivacious, his brief chapters contain little that is open to reasonable criticism. The only serious error we have noticed is his statement (p. 211) that "of all insects the fleas are the most amenable to instruction." It has long been known that the so-called "educated fleas" have neither been given nor accepted instruction of any kind; and that their struggles to get away are responsible for all the movements which superficially appear to be actuated by intelligence. The little book has much to interest young children, especially if used by an intelligent teacher in combination with object-lessons from life. Its illustrations, gathered from a variety of sources, are on the whole good, and it will doubtless serve the useful, if humble and temporary, purpose for which it is designed.

Every English county and shire produces, about every generation, a local antiquary who brings its history and its place-names up to date. Mr. W. H. Duignan's glossary, 'Worcestershire Place Names' (New York, Henry Frowde), has more than a merely local interest; for the English place-names, which nearly all have their root in Anglo-Saxon, occur again and again throughout the whole country, and in them her early history is latent. The word "Bentley," for instance, which means 'untilled land covered with coarse grass, or bents," is to be found as a place-name in almost every county. All such work as Mr. Duignan's has to be done afresh in our day because, before the middle of the nineteenth century, Old English was a neglected study, so that county histories of earlier date, when they give the derivation of a place-name, are usually wrong. Mr. Duignan points out that the recent Ordnance Survey maps, on which the English so implicitly rely, are inferior to the original survey. "Old names are altered without reason, and ancient sites and monuments unnoticed."

Three interesting volumes have recently been added to the series "Les Grands Artistes" published under the patronage of the Administration des Beaux-Arts (Paris: H. Laurens). In the volume entitled 'Praxitèle,' M. G. Perrot presents the results of modern investigation concerning Praxiteles, his works, and style. As is natural and proper in a small book intended for general reading, those works which have only a doubtful connection with Praxiteles are generally disregarded. Furtwängler is followed for the most part, but we are pleased to note that his ascription of the so-called Eubouleus head to Praxiteles is not accepted. The companion volume on Lysippus ('Lysippe'), by M. Collignon, contains in popular form the information available concerning this sculptor and his works. Great importance is attached to the statue of Agias, at Delphi, which is regarded as the best existing indication of the style of Lysippus. Prof. Percy Gardner's deduction, that the Apoxyomenos in the Vatican is not a copy of the statue by Lysippus, is not accepted; on the contrary, the Apoxyomenos is treated as second in importance only to the Agias. We opine that the author somewhat underrates the difference in style between the two works. Each of these volumes contains 128 pages and 24 full-page illustrations. The volume entitled 'Douris et les Peintres de Vases Grecs,' by M. E. Pottier, contains a description and discussion of the social, industrial, and artistic position of the Greek potters and vase-painters, their technical processes, and the relations of their works to literature and monumental art. Duris is chosen as the best representative of his class, not only on account of the excellence of his work, but also because his signed paintings are more numerous than those of any other vase-painter. The 24 plates are well selected and well executed. These three little books are admirable popular treatises by scholars of universally recognized distinction, who are at the same time masters of French style. We fear it will be long before any English books appear to compete with them, and in the meantime we recommend them most heartily to our readers.

The house of Cotta, famous for having originally published the works of both Goethe and Schiller, has brought out as a memorial of the centennial of the latter's death what is probably the best popular edition of his work, in sixteen volumes, bound in cloth, and costing only 32 marks. The editor is Eduard von der Hellen, who has been assisted by the well-known littérateurs Fester, Kellner, Köster, Minor,

Petersen, Erich Schmidt, Walzel, and Weisenfels. The text is accompanied by special introductions to the leading works, and by explanatory notes at the end of each volume. In the last volume are found all the known writings of Schiller not included in his "Werke"; and the first volume contains the arrangement of his writings in four groups—not in three, after the manner made current by Körner. This division Schiller himself made shortly before his death and intended for an *édition de luxe*, which, however, did not appear.

The German Asiatic Society of Japan continues its sessions and issue of scholarly papers in illustration of the civilizations of the Far East. Volume X. contains an illustrated article on the ornaments and jewels in use among the Chinese, shedding much light upon their significance and use. The paper on the Economic Development of the Hokkaido shows rapid and hopeful development of Yezo and outlying islands of the north. A brief but suggestive article on the preservation by freezing and convenient use in summer of three staples of Japanese diet, reveals methods of food preservation unknown in Europe. Of greatest literary interest is Dr. H. Haas's long chapter on the Canon of Buddhism in Japan, which has never been translated into the vernacular, though founders of new sects, notably Shinran, have added writings which are received as holy scripture by adherents of the particular sects for whom the master's communications were intended. Only those sutras belonging to continental Buddhism, and mostly of the Mahayana or Northern Vehicle, come under review, but comparison is made with the work of American and European cataloguers and commentators.

The *Korea Review* for March opens the field of Korean Conundrums, showing that the small boy in the Land of Morning Calm is very near of kin to his young American venter of puns as answers to odd questions. There is a roughly illustrated article on the minting of bronze perforated "cash," a horseload of which is required for an ordinary journey, a stalwart coolie being able to carry 60,000, or $12 worth of money. In twenty years the Japanese dollar has so appreciated that, instead of purchasing 2,000, it can now buy 5,000 Korean cash. There is a scorching review of "the little war of 1871," as related in Rear-Admiral Schley's book, 'Forty-five Years under the Flag.' In this war several hundred Koreans were needlessly slaughtered by American marines and sailors. The editor's comment, after stating the facts inside and outside, is, "We invited an insult and then bitterly avenged it, leaving behind a hatred ten times as bitter as before, and making it impossible that any treaty should be signed until the Regent stepped down from the seat of power." The whole affair was based upon a misapprehension, and the Koreans, like the Americans, imagined that they had won a victory. The editorial notes report continued exploitation of the country's mineral wealth by foreigners.

The *National Geographic Magazine* for June contains a detailed description, with twenty charts, of the methods adopted by the Weather Bureau for forecasting the weather, by its chief, Dr. W. L. Moore. It is a chapter from his forthcoming work, 'The New Meteorology,' and, it should be said, is too technical to be easily understood by the casual reader. In his section on tornadoes Dr. Moore characterizes as ridiculous the shooting at hail clouds as practised in parts of France and Italy. Consul J. C. Covert of Lyon, says, on the contrary, in the Daily Consular Reports, January 7, 1905, that the recorded losses from hail in a certain district in France, consisting of sixteen communes, during the fifteen years before cannon were used, was more than two and a half million dollars. In the five years in which cannon have been in use the losses in this district aggregated $159,412, while in the year 1904 there were no losses whatever—a fact which is attributed entirely to the use of the cannon. Rear-Admiral C. E. Clark contributes a note on the population of China, which he believes to be estimated at twice the correct total. From personal observations during his three years' service on the Asiatic Station, which included a trip 1,000 miles into the interior, he thinks there are less than two hundred millions of people. Still, it should be noted that he did not visit the most densely populated region, the province of Szechuen. A War Department map of the present seat of war in Mantchuria is given as a supplement to this number.

The proposed merger with Technology cuts a large figure in the current quarterly issue of the *Harvard Graduates' Magazine*, both in a documentary way and in Professor Shaler's genial sketch of the late Gordon McKay, whose millions and testamentary purposes are at stake. Effectively, if not formally, this writer casts his vote contra. A portrait of Mr. McKay accompanies the article, and there is another of George Walker Weld, a generous boating patron of the University, and a third of the late James C. Carter, still another benefactor, of high personal distinction. If we miss anything in Mr. John Noble's sketch of Mr. Carter, it is mention of the permanence of the stamp of rustic simplicity in this country-born lawyer, the utter absence of affectation or self-consciousness, which lent personal weight of honesty to the arguments of a great advocate. A group of portraits of eminent members of the class of 1855 instructively offsets one of the first eight of the Phi Beta Kappa men of 1906—a happy innovation *honoris causa*. Other matters of interest are the movement for a teachers' endowment fund; the purchase of Professor Norton's library for ultimate incorporation in the University Library, and raising of a fund for its renewal; and the essay of a Harvard Travellers' Club, which deserves more support than it has apparently received.

The current volume of Proceedings of the American Antiquarian Society at Worcester last October, and in special meetings of the Council on the deaths of Egbert Coffin Smyth and Senator Hoar, contains the will of Thomas Hore of Bristol, England, a burgess of considerable wealth, who bequeathed to the city his oak chest. Upon the discovery of the will two years ago, Senator Hoar instituted researches which unearthed the chest in the garret of the Council House. It has meantime presumably been placed in the National Museum. A picture of this interesting relic accompanies the will. Mr. Hoar, relating the above circumstances to the Society in October, 1903, spoke of his ancestor as also one from whom Holmeses, Lowells, Quincys, John Adams and his posterity, Prescotts, and many other distinguished families and individuals were descended. It would be a curious service for some trusty genealogist to display these and many similar New England connections, in an authentic manner.

The experiment of a "Reformgymnasium" with the classical languages eliminated in the lower forms, and their place taken by scientific studies, does not satisfy the teachers of secondary schools in Germany. The Bavarian philological State convention held in Würzburg has pronounced against the innovation, chiefly on the basis of the report of its official visitor, Dr. Henrich, to the model Frankfort Reformgymnasium. He testified to an excellent teaching corps and good material in the Frankfort school, but maintained that the results were in no way superior to those of the classical gymnasium. A similar report was presented by a university professor. The twelve hundred philologians assembled unanimously agreed to petition the Government to have nothing to do with the "Reform" educational scheme.

The current annual expenses for the higher educational institutions of Prussia have increased enormously during the past three decades, both absolutely and relatively. In 1870 there were 412 such institutions in that kingdom, with an enrolment of 101,772. Now there are 652 schools, with an enrolment of 174,467. The expenses in 1870 were about seven and a half million marks; in 1892 these had increased already to more than thirty millions, and according to the last annual report published the amount was 50,249,120 marks. Of this nearly twenty million was returned in tuition fees, the rest coming from the State treasury (some twelve and a half million) and from endowment funds. In 1870 the average cost for each pupil was 73.1 marks, but now it has risen to the extraordinary figure of 288 marks. The heaviest item in the expenses is the salaries of the teaching corps, which have increased from five and a half million in 1870 to twenty-four million in 1892, and to 42,580,655 marks at present. In other words, the salary charge at the Prussian universities and secondary schools is six and a half times what it was three decades ago, while the teaching corps has only been about doubled during that time.

The programme of the Economic Expansion Congress, to be held at Mons, Belgium, next September, and at which the Belgian Government is particularly desirous that the United States should be officially represented, shows a wide range of subjects to be discussed. Education is the topic of the first of the six sections, and the main question is whether training for a business career should begin in the elementary and secondary schools, or be confined to the high schools and universities, and what are the best methods of instruction. Another section relates to the development of semi-civilized countries, and stress is laid on the inquiry how best to acquire a scientific knowledge of the social condition, habits and customs of the natives, and to raise them to a higher level of civilization. Questions of political economy and customs tariffs and navigation, including subsidies, are to be discussed, and an effort will be made to formu-

late a system of international statistics or a uniform method of classification of commercial data in order to render comparison more easy. The last section treats of the creation of a foreign trade, with special emphasis on Government aid through consular reports, floating museums, and permanent exhibitions.

—It can scarcely have been the intention of the Secretary of the Royal Academy, in compiling 'The Royal Academy and its Members, 1768-1830' (London: John Murray; New York: Charles Scribner's Sons), to show how undistinguished, in the main, have been the members of that body, but that is what he has done. Of the more than one hundred artists who attained to Academicianship in the first sixty years of the Academy's existence, and concerning whom some biographical information is here afforded us, about thirty, on a liberal reckoning, may be known by name to the well-informed student of art, while not more than ten or eleven are to be seriously considered as of some real importance in art history. Of the Associates elected during these same years who did not attain the higher honor, only one, Washington Allston, has a name that means anything to us to-day. And these were the palmy days of the Academy. The list of Academicians elected since 1830 contains even fewer names of any real distinction. The list of Associates of this second period is, on the other hand, a little better than the earlier one, owing to the presence of the names of two or three men who died young—Fred. Walker's being the most prominent—and of two or three who should have been Academicians, but were not, foremost of these being Burne-Jones, A curious feature of the roll of the Academy, from the beginning until now, is the number of names of foreigners which it contains. The earlier portion of Mr. F. A. Eaton's book has a certain odd sprightliness, in parts, and a dash of humor, which would seem to be owing to the collaboration of J. E. Hodgson, R. A. It also contains an occasional bit of criticism of some value. The later pages, where G. D. Leslie, R. A., succeeds to Mr. Hodgson, are better written but duller. Mr. Eaton's own contributions to the history of the Academy as an institution, and the appendices which he has provided, have a certain value and will occasionally prove useful to the student. The book is commendably light in the hand, has eleven good illustrations, mostly photogravures, and is dedicated, by permission, to his Majesty, King Edward VII.

—'The Adventures of King James II.' (Longmans) is a fresh study of court and political life in the seventeenth century by that anonymous writer whose 'Falklands' and 'Life of Sir Kenelm Digby' we have noticed on former occasions. Apart from the interest which the book possesses in itself, it has another claim to attention from the fact that, prefixed to the text, there stands an introduction by Dr. F. A. Gasquet, Abbot President of the English Benedictines. Macaulay said of James II. that "to his policy the English Roman Catholics owed three years of lawless and insolent triumph and a hundred and forty years of subjection and degradation." This statement is in no sense an exaggeration, and one is always curious to see what attitude will be assumed by the modern Catholic historian towards the character of the King who strove so hard on behalf of Rome that his efforts ended in such complete disaster. Father Ethelred Taunton fastens the blame for James's ill-timed policy upon the Jesuits. Father Gasquet has nothing to say about the Jesuits, but deals rather severely with the King himself for having overstepped all limits of reason. "His abolition of the Test Acts, under cover of the Royal Dispensing Power, however legal from a constitutional point of view, under which alone it had the sanction of the majority of the judges, was a mistake, if not a crime." On the score of religious partisanship, the strongest plea which is made on behalf of James in this volume takes a negative form, the author stating that, "even if he had gone beyond toleration and reëstablished the Catholic religion, there is nothing to show the least likelihood that he would have introduced penal laws against Protestants resembling in severity those then existing in England against Catholics." On the testimony of Lord Acton, Wiseman once asked Doellinger what pope there was whose good name had not been vindicated, and Doellinger's reply, that Boniface VIII. wanted a friend, prompted both Wiseman's article and Tosti's book. By way of contrast, the writer of this biography, though he says what good can be said of James II., is not looking around for an unpopular Catholic to be rehabilitated. Having pointed out that James is commonly judged by the part of his life which falls within a brief reign rather than in the light of his whole career, he sets out to write a personal narrative rather than a political estimate. Here James, the brave soldier, industrious seaman and faithful friend, is set out in contrast to the more unprincipled figures of the Restoration court. That the Duke of York was for some years lawless in his amours is freely admitted, but much stress is laid upon his subsequent remorse. The author of this book is an old hand at criticism as well as at biography, and well knows the dangers which arise from over-statement of one's own case. Accordingly, he does not permit his tone to become unduly controversial, nor does he lose sight of his avowed purpose to make his sketch a tale of adventure rather than a plea of extenuation. While less convicing than Dr. Airy's life of Charles II., this volume has the merits which are represented by a fulness of information and incisive writing.

—Ida Freund's 'The Study of Chemical Composition' (Cambridge [Eng.] University Press; New York: Macmillan) is a work upon a novel plan. A sub-title informs us that it is an account of the method of that study and its historical development, with illustrative quotations. Another feature of it is that it selects the most instructive examples and sedulously avoids all appearance of giving complete details of anything; showing, for example, the general plan and results of the best determinations of the atomic weights of more than half of the elements, but saying nothing about the atomic weights of the others, nor generally about other determinations of those that are referred to. Its historical parts go back to the phlogistic period and even earlier. We cannot see how the plan could have been carried out with greater skill; and it is an excellent plan, provided the narrow limitations of its utility be recognized. To a professional student of chemistry it will afford amusement, and here and there call his attention to a stray fact or consideration. To a non-professional student it presents the disadvantage that, after he has gone through it, it will not serve as a handbook; but he will be driven to handbooks of which he has made no study, and which very likely falsify their names in not being at hand. Nevertheless, to such a student it offers the signal advantage that, if the study of it be supplemented by a few months of entire absorption in laboratory work, it will furnish him with very nearly such *aperçus* of this branch of science as the real researcher in it has. The authoress has evidently held this purpose steadily in view, and accordingly directs attention at each epoch of each problem to its logical aspects; and her opening chapter is devoted to the method of the inductive sciences, a subject to which the historical method is more advantageously applicable than to chemistry. Unfortunately, she has made no exact study of scientific logic, and both this chapter and other parts of her book have suffered grievously from this deficiency.

—'Die Doppelehe des Landgrafen Philipp von Hessen,' by Dr. W. W. Rockwell of the Andover Theological Seminary (Marburg: N. G. Elwert), has a double claim to notice. The work done by American students in Germany, however creditable it may be on the whole, seldom reaches in either scope or quality the level of excellence here attained. And even if this were not a striking example of thesis literature at its best, the intrinsic importance of the subject might well lead us to comment upon a new and learned treatment of it. Ever since Luther's own lifetime, great scandal has been caused by the attitude of Protestant theologians towards Philip of Hesse's bigamy. How, it is asked, could the men of Wittenberg, with the nineteenth chapter of St. Matthew before them, have consented to sanction such a breach of the moral law and the divine command? What Roman Catholic controversialists have had to say regarding Lutheran antinomianism derives its chief color from this episode, and even Köstlin admits that Luther's part in the matter is the chief blot on his career. Unfortunately, all the prima-facie considerations seem to point in one direction. Philip of Hesse was, politically speaking, the bulwark of the Lutheran cause—a man whose defection would have been a serious blow. This being the case, it is hard to convince one's self that Luther and Melanchthon did not cut a sharp corner, and connive at the immorality of a powerful supporter for the sake of keeping him on their side. Dr. Rockwell, however, does not accept the traditional view, nor does he assume an apologetic tone. While criticising the position of Roman Catholic writers, his real attack is delivered upon the confession of Köstlin that Luther did himself little credit in winking at the Landgrave's sins. The question is considered from many standpoints, and the views of all the leading reformers are introduced into the discussion. But, taken as a study with a motive, this monograph centres in Luther rather than in Philip. Dr. Rock-

well's statement of the circumstances, though adequate, is not the vital part of his work. From a particular instance he passes on to a general account of the views which were held on the subject of polygamy during the age of the Reformation. Obviously the Old Testament was a magazine of arguments for one side of the question; and the best that can be said on Luther's behalf is this—that while, on the one hand, he found an undoubted precedent in the example of the patriarchs, on the other, he could not discover in the New Testament a distinct and unequivocal prohibition. Dr. Rockwell shows great straightforwardness and learning in his treatment of this difficult theme. He has written the most thorough account of the incident which we have yet seen; nor is it likely that many studies of equal value emerge even from the seminar of Mirbt.

—For nine years, beginning with the "Midsummer Night's Dream" in 1895, the "Senior Dramatics" at Smith College were occupied solely with Shakspere, and every season with a different play. Last year a breach was made by the performance of "Sakuntalā." Last week there was a wise return to the original source of inspiration; and if the repertory was not extended, the repetition of "As You Like It," first essayed in 1896, was a virtual novelty—of course altogether such so far as the participants were concerned, the "management" alone remaining the same. The result amply justified the decision of the class, and has probably fixed the Shaksperian loyalty of the College for an indefinite period. In other words, every year there will be a Shaksperian representation in Northampton; and of how many American cities can that be said? In how many cases, moreover, that the quality of the professional performance equals in general evenness of talent, intelligence, and refinement the amateur work of these young women? In this latest instance, in place of a star *Rosalind* and a scratch company, the three leading romantic rôles were sustained by actors strongly competing in merit, and, as it happened, in physical beauty; and, throughout, the attention of the audience was firmly held by the action. The comic parts were relatively less well done—less adequately, perhaps, than has been common heretofore; in these the sententious character of the text called for especial distinctness and weight of delivery. On the other hand, there was no overdoing of the "business." The scenic effects were pleasing, and the magic of the poet's diction effaced all minor defects inseparable from the personation of one sex by the other, just as the primitive stage-setting was effaced in Shakspere's own day. There remained, besides, a sense of grace and breeding not to be experienced in an ordinary playhouse.

RUSSIA VIEWED BY TWO OBSERVERS.

Russia in Revolution. By G. H. Perris. With illustrations. London: Chapman & Hall, Ltd. 1905.

Russia as It Really Is. By Carl Joubert. London: Everleigh Nash; Philadelphia: J. B. Lippincott Company. 1905.

Mr. Perris's point of view is clearly indicated by the quotation (which he uses as a motto on the title-page) of a phrase from the communication of Prince Trubetzkoy, president of the Moscow Zemstvo, to Prince Sviatopolk-Mirsky, in December, 1904: "What is passing [does he mean "taking place?"] at present is not a simple riot, but a revolution." His aim is to set forth the whole political history of Russia, from the beginning of its existence as a State, and especially during the last thirty-five years, down to April of the present year. After a succinct survey of "Natural Conditions: Geographical, Climatic, Economic," he proceeds to "Historical Conditions," and remarks: "The system of absolute monarchy is, in fact, deeply rooted in the natural history, and closely bound up with the geographical situation, of the country." On the following page he says:

"Western carpet-baggers talk of the Slav being incapable of self-government. The fact is that, down to this day, the humble muzhik has enjoyed a power over the essential conditions of life, political and economic, such as the Western peasant has not possessed since the dawn of the Middle Ages; and in the form of the artel, or co-operative society, he maintains his collectivism even in the strongholds of modern machine industry."

These quotations will serve to show Mr. Perris's sincere effort to be fair and impartial, but the same paragraph furnishes two other quotations which equally well illustrate his defective vision in consequence of his prejudice against nearly everything in Russia in its present form.

"The virus of Byzantism," he says, "was even more deadly in the East than that of Romanism in the West. It gave a simple pagan people something of culture, something of ethics and philosophy; but it gave these in a degraded form, and one peculiarly mischievous in that it cut them off from Western thought by its separate alphabet and language, art, and political ideals. . . On the religious side, as on the political, it may be said that, while the Orthodox (which does not even pretend to be a Catholic) Church helped at the outset to maintain the national spirit amongst [against?] the invader, that justification has long disappeared."

The remark about the alphabet and the language, so easily applied in numerous other cases, is amusing. As to the Orthodox Church, Mr. Perris is misinformed: it claims the title of "Catholic," and professes to be the original "Catholic" Church, as a would-be authoritative writer should know. A little further on, he alludes to "the great movement of religious dissent, the immediate cause of which was the arbitrary innovations of the Patriarch Nikon"—the fact being that Nikon made no innovations whatever, but merely had clerical and similar errors corrected in the Scriptures and Church Service books. Mr. Perris pays his respects, in the same spirit and degree of weight, to the Church and its affairs and acts, at intervals throughout his book. Under the heading, "The Oligarchy," he sets forth the machinery of the Government, the councils, and the character of their members and their actions; and, having described the confusion of the labyrinthine laws under the caption of "The Land without Law" (all this is rather difficult reading, partly by reason of its conciseness), he enters upon the most interesting part of his subject, the real topic of his work. He has collected a number of first-hand accounts from political prisoners, of a sort with which the world has already been made familiar by previous writers, and which may be accepted with some reserves. When, however, Mr. Perris himself undertakes to summarize a situation or narrate as historian, he is not always properly equipped.

For example, in speaking of the fortress of St. Peter and St. Paul, he says: "Here the Decembrist leaders were buried"—presumably intending the reader to understand that they died there. Most of them were sent to Siberia, and, when they were pardoned, a majority refused to return to Russia because of their love for Siberia. Again, a more important instance; in discussing "The Annals of Schlüsselburg," Mr. Perris alludes to the sad fate of several prisoners, stating, among other things, that a certain one, condemned in the "Trial of the Fourteen," went insane in 1884. We are at liberty to infer that he also died, like others mentioned, in similar circumstances. This man (whose vocation is wrongly stated) was sent to Sakhalin, where he served the Government well, and later spent a couple of years in Siberia. In 1896 he returned to Russia; he has had all his privileges and rank restored to him, has been sent by the Government on more than one important expedition, and is at present serving in a position of trust in one of the Ministries. The amusing feature of this case (so far as Mr. Perris is concerned) is, that on page 125 he remarks that he has copied three illustrations from a book "by a former exile, Mr. Mirolubov," which appeared in the *Russian Historical Review*. He is, apparently, not aware that "Mr. Mirolubov" is the pen-name of his "insane" prisoner at Schlüsselburg; and that the man in question is a regular and valued contributor, under his own signature, not only to the *Historical Review*, but to other publications. We may remark, in parenthesis, that the name "Mirolubov" was compounded by the ex-political from the words *mir* (peace) and *lubov* (love), which he has taken as his motto, asserting that the Government treated him exactly right, and that peace and love are the only legitimate or valid weapons, not violence or revolution.

On page 101 the author, in speaking of the Emperor, says: "When, as Tsesarevitch, he visited Siberia, he was believed to have personally inspected the condition of the political exiles. He really did and could do nothing of the kind, for the politicals were carefully removed or put out of sight before his passage." Again there is some misunderstanding, or misrepresentation. The writer of these lines received a letter at the time from a friend who lived at one of the important towns in Eastern Siberia visited by the then Tsesarevitch and was present at his reception, and who wrote: "The condition of the politicals here is totally misunderstood abroad. When the Tsesarevitch came through, there were politicals appointed on the reception committee, here as elsewhere in Siberia; and he shook hands with them and talked with them exactly as he did with the Governor." Again, the case of "Mr. Mirolubov" above cited refutes a statement on page 120 about Sakhalin: "A man or woman deported to this hermetically sealed island is lost to the world." More serious is the assertion, commonly but falsely made by revolutionists and their foreign sympathizers, that "the peasants have been of deliberate policy kept in a condition of degrading ignorance and subservience;" and that, "through its [the Holy Synod's] State-protected network of village

schools, any substantial advance of elementary education in the Empire is effectually stopped." Without entering into details, it may be stated as a fact that the whole question of schools or their absence is, primarily and mainly, one of economics —on the part of the State and Synod, how to provide the immense means required; on the part of the peasants, how to spare the labor of children of school age.

Many writers have approved of the Government monopoly of liquor; our author does not. Neither does he approve of M. Witte, by many regarded as a great statesman and financier. He declares that most of the latter's "huge transactions" were "mischievous, burdensome, and perilous in a high degree," but later on he admits that "M. Witte, when all criticisms have been uttered, is a great administrator, with an ambition equal to that of Cecil Rhodes, and an executive capacity almost comparable to that of Lord Cromer"; and that the establishment of the spirit monopoly and other important acts were "colossal designs." One sentence (in Mr. Perris's chapter on "The Tariff"), will make many Americans wince, while they smile; "The whole of the manufacturing class is reduced to a servile position; it is encouraged, even compelled—this is the whole *raison d'être* of the system —to sell dear at home and cheap abroad." When he comes to the discussion of the present war with Japan, he frankly acknowledges that "Great Britain made this war possible when she concluded the treaty of 1902, and so lay under a secondary responsibility," and that "with Japan lies the responsibility of forcing on hostilities"; but when he asserts, a little further on, in a list of Russia's crimes, that "it has maintained upon his throne Abdul the Assassin, with license to slaughter the Armenians at will," he is less frank, and will surprise those who have regarded it as conceded that England is responsible for the maintenance of the condition of affairs in Turkey.

The biographies and autobiographies of the propagandists, Tchaikovsky, Volkhovsky, Stepniak, and others, at times repeat, at times supplement, previous narratives; and again, some are entirely fresh. All are of the greatest interest, as are, also, the chapters on "The New Generation" (including the students and their agitations), "The Rise of the Labour Movement," and "Bloody Sunday: A Broken Idol." The author's interpretations of events—even his statements of facts—do not always accord with interpretations and statements from equally (if not more) authoritative and competent sources; but such a compact and regular narrative of events from one point of view is undeniably valuable. In his concluding chapter, "The Prospects of the Revolution," the author tries his hand at prophecy, in hopeful vein. On the whole, he has performed well a difficult task, and his book, subject to the cautions we have suggested, may be recommended as both important and useful. Of the illustrations, most of them fairly well reproduced, and some without much point, the best and most interesting are the portraits of the "politicals" and propagandists.

'Russia As It Really Is' is one of the most curious and puzzling books it has been our lot to see for a long time. In his preface the author mentions the numerous works on the subject already extant, and declares, with sweeping denunciation, that "all are written from the point of view either of the traveller, or of the alien politician, who seeks to demonstrate the effects of Russian expansion on the policy of his own particular country. Some have been written with scanty knowledge and restricted powers of observation; others are dependent on official information for the facts (?) which they set forth." He then states that a couple of books on Russia had been recently presented to him by their author, and, after reading, he "pondered how those books could have been written, published, and sold to the public. They purported to describe Russia—it might almost as well have been Timbuctoo." The reader of Mr. Joubert's book is, on the whole, forced to ponder along the same lines; particularly in view of his statement that he has lived nine years in Russia, has visited every Government in the empire, has associated with every class, and "acquired the languages of the country, Russian and corrupt Russian, Polish, Lettish, Lithuanian, and Yiddish." After this preamble, downright amazement seizes upon the reader with the opening paragraphs of the book proper. "His Imperial Majesty Emperor Nicolas Alexandrovitch, Autocrat of All the Russias," he writes. "By these and many other titles is he known—the Holy Tsar of Russia. He himself has commanded that he should be so called; for no subject can give him honors and titles. And, therefore, is he known as *Zembla Bogh*—'The God on Earth,' 'The Pope of the Greek Church,' 'The Master and Maker of the Holy Synod,' 'The Adjuster of the Earth,' 'The Peace and Goodwill on Earth.' For Russia is the Tsar, the Tsar is Russia. The Synod belongs to the Pope; and the Pope is the Tsar, and the Tsar is God on earth"—with more to the same purpose. As a matter of fact, the Emperor bears not a single one of the alleged titles, self-conferred or otherwise, except that of autocrat; moreover, there is no such word in the Russian language as "zembla," though the expression "Zembla Bogh" is such a favorite with our writer that he uses it constantly throughout his volume, as though the title and the actual words were the most commonly current in Russia.

The chapter on "The Holy Church" is replete with curiosities. "The Metropolitans," he says," by order of the Tsar, arrange the ritual to be observed in the churches," and this assertion is made concerning a church whose pride it is that its ritual has been fixed for centuries! More extraordinary yet is the assertion that different brands of "superstition" are deliberately supplied to the inhabitants of different parts of the empire, with the general intent of keeping them from dangerous thoughts. The author has mistaken the popular folk-lore, the tradition of ages, so highly prized by scientific observers, but warred against by the Church, for something entirely different. It is needless to enter into further details; but it may interest Mr. Joubert to learn that he is mistaken in an ordinary matter of fact when he speaks of "the great Church of the Annunciation, where the Czar assumes the crown, paved with jasper, carnelian, and agate." The Tsar assumes the crown in the Cathedral of the Assumption; and the neighboring tiny Cathedral of the Annunciation is paved with jasper only. One wonders how acute the observation of more recondite matters can be. As the war in the Far East has set an entirely new standard of indifference to the life of soldiers in general, we need not pause over Mr. Joubert's views upon the attitude, on that score, of Russian officers, which contradicts the views of many previous writers.

In view of what has been said concerning the missionaries (of England in particular) as the "advance-agent of annexation," and particularly in view of England's recent expedition to Lhasa, the brief chapter on "The Missionary" is merely amusing. The premature graduation last February of medical students whose services were needed in the Far East is misrepresented. The rough-and-ready statement of the censor's duties is incorrect. The large section devoted to "The Jew in Russia" is interesting, especially on its anecdotal side (as is the whole book), but neither novel, profound nor exhaustive. The volume seems to have been written, in truth, for the sake of the story contained in Part III., entitled "A Power above the Tsar," which monopolizes one-half of its bulk. The power referred to is money, which Mr. Joubert discreetly employed to rescue from Siberia a scientific friend, condemned to exile on slight grounds. The tale is of absorbing interest, though everything happens exactly as in a well-regulated fairy-tale—by which we do not mean in the least to impugn its veracity, but merely to intimate that it is a case where the truth is stranger than fiction.

There is one point, however, to which we have already referred, and which is brought forward again very prominently in this connection, namely, the author's firm belief in his perfect knowledge of the Russian language. He even explicitly declares that he can talk Russian better than he can English, and sets out in quest of his missing friend disguised as a Russian. It was partly on this ground that we characterized the book, at the outset, as curious and puzzling. As it has run into the seventh edition in the course of as many months, and therefore ample opportunity has been afforded for revision, the Russian language as it appears in these pages must, in justice, be accepted as representing the author's proficiency in it. The great majority of the words and expressions are incorrect. Admitting that Stambov (for Tambov) is a typographical error, Yaroslaff (for Yaroslavl) is not. In describing the costume of the peasant man and woman, Mr. Joubert calls their coat a *shinell*. The waist-fitting, knee-length sheepskin *tulup* of the peasant (or even the occasional cloth coat on the same lines) is entirely different from the long, flowing *shinell* of the officer or civilian, with its pendent sleeves and deep cape. Even nine years of familiarity with the ordinary Christian names and patronymic formations have, apparently, not initiated Mr. Joubert into that simple lore. For instance, "Petrushka" is the diminutive of Piotr, not (as represented) of "Petrus." Still more surprising is the confusion (page 45) over Ilya and its derivative. "What is your name, brother?" he asked. "Ivan Ilyitchovitch." "Is it possible that your father's name was Ilyitch? . . . I went up to Ivan Ilyitchovitch." The father's name was Ilya (Elijah), and the son's could have been nothing else than "Ivan Ilyitch"; Ilya being one of the rare, irregular excep-

tions to the formation of the patronymic. Mr. Joubert represents the priest in Siberia as calling him "paltchik moia," having previously defined *paltchik* as 'little boy.' The word is "maltchik," and, being masculine, should not be accompanied by a feminine adjective. "Nasha Russki Mallatchi! (our Rusian bravery)" is, probably, intended for "nashi Russkie molodtzi (our brave Russian fellows.)" If the simulated Russian (Mr. Joubert was, by advice, happily not simulating at the moment in question) had used one feminine and one masculine adjective, both in the singular number, with a masculine noun in the plural, as he represents, his disguise would have been easily penetrated, though *fulkas* (rolls) for *bulki* might possibly pass muster.

SHAKESPEAREAN TRAGEDY.

Shakespearean Tragedy. By A. C. Bradley, Professor of Poetry in the University of Oxford. Macmillan & Co. 1904.

To the reader seriously interested in literary scholarship, no book more cheering than this has appeared for many years. Much of our criticism is so superficial, much of our learned writing so dry, that the publication of a work solidly based on erudition, marked everywhere by keen insight and fine judgment, and abounding in fresh and stimulating ideas, is a great literary event. That the powers implied in these qualities should have been employed in the interpretation of the supreme masterpieces of our literature, is still further a cause for the heartiest congratulation.

It is easy, in these days of the laborious investigation of detail, for the scholar to lose sight of the ultimate aim. Yet in his saner moments the most uninspired of philological diggers, or the most curious hunter after

> "two points in Hamlet's soul
> Unseized by the Germans yet,"

admits that the defence of his work lies in the hope that it may contribute to some far-reaching generalization, or to the better interpretation of some great work of art. It is to be sorrowfully admitted that the mind capable of using the results of research for these grand purposes appears only at rare intervals. Here once more, however, it has appeared, and it is to be welcomed with enthusiasm and gratitude.

The plan of Dr. Bradley's book is simple. After a short introduction, the author proceeds to the discussion of the substance of Shaksperian tragedy, of the construction of the tragedies, and of Shakspere's tragic period. These three lectures serve for the exposition of the main ideas forming the background of the subsequent treatment of the four great tragedies, "Hamlet," "Othello," "Lear," and "Macbeth," to each of which two lectures are devoted. Some thirty notes on moot questions lying aside from the main lines of interpretation close the volume, and are of especial interest to the professed student.

A serious difficulty confronts the critic who would deal with matters already so much discussed as those just enumerated. If account is taken of the large amount of even valid and plausible interpretation that has already been made, the bulk of a book on Shaksperian tragedy will be swollen almost beyond bounds; if things already well done are silently passed over, the work will be apt to suffer in proportion, and to be misleading to all but specialists. Nothing proves Dr. Bradley's literary tact more conclusively than his treatment of this dilemma. He never descends to mere recapitulation, yet, while using most of his space for discussions where he has something individual to contribute, he seldom fails to keep perspective, and to indicate sufficiently the views of the more important of his predecessors. No one who has essayed to write freshly on a well-worn theme will fail to perceive the distinction of such an achievement.

An idea of the actual method of the book may be gathered from an outline of Dr. Bradley's treatment of the fundamental question of Shakspere's conception of tragedy. It is to be noted at the outset that it is the Shaksperian tragic conception that is dealt with, not the Aristotelian, or any a-priori theory. In other words, Dr. Bradley attempts to extract from Shakspere's tragedies themselves the dramatic theory which undoubtedly underlies them (whether or no it was ever explicit and conscious in the mind of the dramatist), just as Aristotle derived his theory of tragedy from the actual works of the Greek dramatists of his time. Aristotle's results are inevitably in the author's mind, but they do not dominate, as they have so often dominated in critical attempts to state the theory of Elizabethan dramatic art. Beginning with the mediæval conception of tragedy as a story of the terrifying downfall of a man of high estate, he shows how this persists in Shakspere, but how it has added to it certain further elements. First, this downfall is the culmination of a series of human actions, and these actions are due to character. Next, though abnormal mental conditions, insanity, hallucinations, and the like, are admitted, these are not the causes of deeds important for the development of the plot, but are rather symptoms or consequences. If they were main causes, the first statement that the action must be caused by characteristic deeds would not be true. The bearing of this on, *e. g.*, the question of Hamlet's madness is obvious. Similarly, though the supernatural is frequently introduced, it enters the action only in close relation with character, and never so as to deprive the tragic hero of the power and responsibility of deciding his own line of conduct. Finally, chance is allowed a part in the action, *e. g.*, in the determination of the fatal moment when Desdemona drops her handkerchief. But this part is always subordinate, and never crosses, but only hastens or confirms, a course of action already set agoing by character. This statement of the nature and elements of Shaksperian tragedy is supplemented by a consideration of the Hegelian view of tragedy as a conflict between the hero and a hostile force; but this Professor Bradley regards as an inadequate formula for Shaksperian tragedy on account of the importance, in the tragedies of Shakspere's maturity, of a conflict *within* the hero's soul.

So much for the tragic action. Shaksperian tragedy is characterized also by a particular type of hero. The tragic hero is not merely a person of exceptional position enduring extreme calamity; he is also marked by "a fatal tendency to identify the whole being with one interest, object, passion, or habit of mind." He is not always "good," as the Greek tragic hero had to be, but he is always on a great scale. This greatness it is which prevents a Shaksperian tragedy from depressing us. Whether the catastrophe involve the destruction of a superb villain like Richard III. or Macbeth, or the heart-rending downfall of an Othello, we are kept clear of cynicism by a picture of the tremendous possibilities of human nature. This sense of the greatness of humanity as displayed in the tragic hero points to what Dr. Bradley calls "the centre of tragic impression—the impression of waste." If human nature be so beautiful or so great, why must it suffer so and be so thrown away? To this question the dramatist gives us no answer. It is the fundamental mystery which leaves us awed and solemnized at the close of the drama, as it is the fundamental mystery which remains unsolved in life.

But in this world of tragedy, in which the mysterious waste of greatness is the essential tragic fact, what is the dominating power? The two opposing answers that have usually been given are both set aside as inadequate. It cannot be an omnipotent, just, and benevolent power, or it would not leave us with the closing sense of mysterious suffering and waste. It cannot be sheer fate, either blind or malicious, for then it would leave us rebellious, which the great tragedies do not. Something of both forces we seem to feel. The suffering, though often not entirely deserved, is at least largely traceable to the hero's weakness or crime. Yet the forces set in motion by such weakness or crime seem augmented by chance coincidences which produce a train of consequences leading far beyond what the human agent intended or conceived. Man is seen as a child starting some tremendous machine which he can neither understand nor control, but which, on the other hand, never starts of itself, as it does in Greek tragedy. If man is not supreme, he is never mere victim. Further, it is misleading to speak of the order of the world, moral or other, as something detached from man and his activities. The hero, and the weakness or wickedness which leads to his destruction, are part of this order, which is to be viewed as a system striving to purge itself of a poison, and in doing so sacrificing much in itself that is innocent and wholesome.

"Sometimes," indeed, "from the very furnace of affliction a conviction seems borne to us that somehow, if we could see it, this agony counts as nothing against the heroism and love which appear in it and thrill our hearts. Sometimes we are driven to cry out that these mighty or heavenly spirits who perish are too great for the little space in which they move, and that they vanish not into nothingness but into freedom. Sometimes from these sources and from others comes a presentiment, formless but haunting, and even profound, that all the fury of conflict, with its waste and woe, is less than half the truth, even an illusion, 'such stuff as dreams are made of.' But these faint and scattered intimations that the tragic world, being but a fragment of a whole beyond our vision, must needs be a contradiction and no ultimate truth, avail nothing to interpret the mystery. We remain confronted with the inexplicable fact, or the no less inexplicable appearance, of a world travailing for perfection, but bringing to birth, together with glorious good, an evil which it is able to overcome only by self-torture and self-waste. And this fact or appearance is tragedy."

The independence and profundity of

thought implied in this induction are characteristic of Dr. Bradley's work throughout. The later lectures, dealing concretely with the familiar figures and actions of the *dramatis personæ*, are naturally more easily followed, and will appeal to a wider circle. But in these also we find the same qualities: the remarkable persistence with which this writer clings to the documents, the absence of that tendency to wander off on subjective lines which has vitiated much of the criticism of Coleridge and the Germans, the freedom from the bias of a literary orthodoxy to which he must conform, the illumination of a mind that has pondered deeply on life itself.

Dr. Bradley would be the first to deny that there is no more to say on these themes, that there are no other points of view worth occupying or methods worth pursuing. Here and there one is inclined to think that an interpretation would be modified by a closer examination of the theatrical conditions which the plays were designed to meet, or by a wider comparison with Elizabethan tragedy outside of Shakspere. But it is not safe to assume that any omission of this sort is due to ignorance on the part of the author. It is not his method to prove his learning by footnotes; but there are abundant indications of a thorough study of the literature about Shakspere, as well as an extraordinarily minute consideration of the plays themselves. A great mass of erudition, thoroughly digested, reasoned, and ordered, is brought to bear not merely on the four tragedies professedly dealt with, but incidentally on the other plays as well; the ideas are expressed in a style always admirably clear and often of a finely restrained eloquence; and the result is what one is compelled to regard as a permanent addition to the two or three great books on Shakspere.

The Old Farmer and his Almanack: Being some observations on life and manners in New England a hundred years ago, suggested by reading the earlier numbers of Mr. Robert B. Thomas's 'Farmer's Almanack'; together with extracts, curious, instructive, and entertaining, as well as a variety of miscellaneous matter. By George Lyman Kittredge. Embellished with engravings. Boston: William Ware & Co. 1904.

There is little about either the Old Farmer or his Almanack in this volume, of which the title-page recalls to a critic such a name as *omnium-gatherum*. "The Man, his Book and Correspondents"; "Astrology," "The Man of the Signs," "Murder Will Out," "Wit and Wisdom," "Lawyers and Quacks," "Toad and Spider," "Sugar and Salt," "The Flying-Stationer," "Drowned!" "Fire!" "Huskings," "Indian Summer," "Army and Navy," "The Schoolmaster," "Titles of Honor," "Munchausen," "On the Road," "Entertainment for Man and Beast," "Moonhoax," "What to Read," "Barberries and Wheat," "Indian Talk," and "More Indian Talk"—few of these topics fail to deaden the momentum with which, in the table of contents, we pass on to their successors. There are, indeed, not a few purple patches sewed into this crazy-quilt, but they are hid from our eyes unless we find clues in the capacious index. These elegant extracts were largely compiled from the hundred-volume series of the Massachusetts Historical Society, and similar publications, either voluminous or rare, like the works of Bradford, Mather, and other ancients, as well as the more recent town histories, Dwight's Travels, and Stiles's Diary. Thanks are also given to authors still in their best years for permission to forage in their harvest fields or to transplant cuttings from their nurseries. Yet, while importing such exotics, Professor Kittredge sometimes fails to borrow the vital spark. A typical case is the locution, Indian Summer. Regarding its origin, he states that earliest date, 1794, which it cost Mr. Albert Matthews more than a decade to establish, but he neglects to tell us the place where it first appeared—an omission which nullifies the significance of the Matthews finding. When both date and place are given by Matthews, the one is taken and the other left. Matthews's mention that he found it in a general's journal is borrowed, but no syllable shows where its author was born or lived or wrote. The *where* is as important as the *what*, the location as the locution. Marred by similar hiatuses, not a few sections are both too short as lacking an essential fraction, and too long as crammed with trivialities which make them dull, in Voltaire's phrase, "through saying everything."

A manifest aim and ear-mark of this Almanack commentary is popularizing folklore bibliothecally, and the result is garnering a plentiful harvest from books. But we miss the wisdom of the streets, immemorial sayings which are slow to pervade and permeate language with new words and new meanings, but always smack of mother-wit and first-hand observation. Such analects abound in Franklin, and are not lacking in Thomas. A handful of such as these, gathered up and held in store for the mellowing of occasion, would prove a saving salt for a flock of platitudes which in our author are not appetizing. If learning has not made our author mad, it has kept him too bookish, or made him pass by on the other side, as unconsidered trifles, such books as the 'Biglow Papers,' which would perfume his pages all through with the genuine old Yankeeism. We cannot enough regret that he did not oftener turn his back on bookworms and books, and sit in conversation at the feet of his oldest nonagenarian neighbor. Thus, concerning postage in our early decades, we find in this medley no statement rousing a reader to notice that it would cost more than a dollar to mail a dollar bill for a single mile over the 400 limit. The old man, however, would first remind Professor Kittredge that each piece, however small, must pay the full rate, so that the bill and receipt required four postages each of a quarter. He would add: My father I saw cutting his bills in twain and doubling his postage, for, as he said, letter thieves would be thereby baffled since they would find half a bill valueless, and he retained the second half till he heard of the first at its goal. So, too, in talking of training-days, the man of three generations would tell of anvils serving for improvised cannon-crackers—and more noisy; of companies well-named floodwood (since they were like trees swept down, of all heights and sizes, in mountain torrents), and of a regiment lined up in a bee-line, not by a lucky accident, as our author has it, alongside a fence, but with all toes touching a furrow in the grass cut beforehand with a dull axe true to a cord stretched from stake to stake. If questioned in relation to schools, the man of many decades would recall that his schoolma'am imprisoned naughty girls in a dark closet under the stairs, or made a bad boy sit between two of them for a triple shame. Her cuteness was at its best when she forced two bigger boys to switch each other while she stood ready to flog the first flincher. If asked about antique lunar credulity, our sage might say: Look at my centurial clock; mark on its face moon changes in figures on the centre. Thus, by opening his little finger, one who has long walked hand in hand with time, would let loose such relics of ancient New England as are rare in Professor Kittredge's book of erudition, which is tied to his topics only by an attenuated thread.

His ultimate and longest lucubration, "Indian Talk," may have been added in hope of praise won for a gay and festive ending like the furrow-end of Homer's ploughman, who sees there a boy with pitcher and goblet for his refreshment. This finale treats of aboriginal endeavors to imitate or at least mimic white men—in form, if not in truth—as to speech, writing, titles, and whole manner of life; and begins with an Indian writ in these words: "Me High Howder, yu constable, yu deputy, best way yu look um Jeremiah wicket, strong yu take um, fast yu hold um, quick yu bring um before me.—CAPTAIN HOWDER." The comic element here is perhaps not unalloyed with pathos.

Great Zimbabwe, Mashonaland, Rhodesia: An Account of Two Years' Examination Work in 1902-4 on behalf of the Government of Rhodesia, by R. N. Hall. With an introduction by Prof. A. H. Keane. With 200 illustrations, maps, and plans. E. P. Dutton & Co. 1905. Pp. xliii., 459. 8vo.

Great Zimbabwe—a native term for stone buildings—was forty centuries ago the metropolis of a gold-mining region in South Africa. It occupied an area about two miles square, the principal ruins being a temple and an acropolis or hill fortress. As gold in large quantities and in almost every form (from dust to most delicate and artistic ornaments), and furnaces, scorifiers, and crucibles have been found in them, it would certainly seem as if the ore must have been brought here from the surrounding country, smelted and manufactured or taken in ingots to the coast, the route being indicated by remains of forts. Though the site was discovered by the Portuguese in the early part of the sixteenth century, the first scientific explorer of it was the late Theodore Bent. In 1902 the Rhodesian Government commissioned Mr. R. N. Hall, who had spent several years in a general investigation of all the ancient ruins in the territory, to make a special examination of Great Zimabwe, and this volume is a report of his two years' work. It contains, after a description of the place, its relics and "finds," and the ancient architecture, a minutely detailed account of each ruin or group of ruins. From this it will be evident that the book is intended for the archæologist rather than for the public at large, though some lively pictures of native life and the impressions which the place made upon the author show that

he was capable of writing a book of general interest.

Although he has a decided conviction as to who these ancient miners were, he does not discuss the subject, but simply endeavors to let the ruins tell their own story. Prof. A. H. Keane, however, contributes an introduction, in which he restates his theory that this region was the "Havilah," 'where there is gold,' of the Old Testament (Gen. ii. 11), the port Sofala being Tarshish, while Ophir was the great Himyaritic emporium on the south coast of Arabia, whence the gold was distributed over the Eastern world. This is not a new theory; it was held in substance by Milton, who, in 'Paradise Lost' (Book xi, 400) includes

> "Sofala (thought Ophir) to the realm
> Of Congo, and Angola farthest south"

among the kingdoms seen from the Mount of Temptation.

There have been numerous "finds," but no inscriptions; and, stranger still, no indications of burial-places have been discovered. But as nine-tenths of the ruins remain practically buried, it is possible that inscribed tablets like those of Tel el-Amarna may be brought to light. It would take three years, says Mr. Hall, to explore the acropolis alone, there being seven distinct strata of débris. Though the absence of written documents prevents the fixing of exact dates, the ruins bear abundant testimony to the fact that at least four thousand years ago this region was inhabited by a vast number of people whose chief industry was gold mining. Among them were skilled architects and builders, expert jewellers, and men having some knowledge of astronomy. Their oriented temples containing soapstone beams with bird effigies and phalli, their architectural decorations and gold ornaments, show that they were akin to the South Arabians and Phœnicians. Their many fortresses on precipitous cliffs, made almost impregnable by narrow and tortuous passages, prove that they were foreign invaders of the soil and confronted by an ever-present foe who finally overwhelmed them. One cannot but feel that the place was the theatre, in those prehistoric times, of events as momentous as those in the annals of Babylon or Thebes. The numerous illustrations with which the volume is adorned give a graphic impression of some of the oldest works of man in existence.

Italian Backgrounds. By Edith Wharton. Illustrated by E. C. Peixotto. Charles Scribner's Sons. 1905.

This collection of essays on Italian subjects is full of suggestive ideas on the point of view people take as to what they expect to find, and what they wish to see, in their travels. Mrs. Wharton has many unusual qualifications for writing on the art of Italy in its many phases, among others a brilliant style, historic research, and a catholicity of taste. She herself, to use her own classification of travellers, belongs "to those idlers who refuse to measure art by time, and for whom Italy has a boundless horizon." The second category, "the happy few who remain more than three days," might well profit by her mediations as to how to employ their time and how to enjoy the "middle distance" which is their share; but, for the "hasty traveller" "for whom the foreground is asterisked," her experience cannot serve. He has neither time nor capacity for seeing; does he not hurry through the Vatican rooms as if flying from destiny, and wondering what he has come to see? It is quite true that Italy cannot be understood or enjoyed by a hasty survey of its art treasures and sites of interest; only long sojourn, the serious study of its history and art development can prepare one for seeing intelligently and understanding the *raison d'être* of the different epochs which have left their mark on all the great cities with such astonishing predominance. The baroque character of Rome, for instance that seventeenth-century "debased style," according to the guide-book, which Bernini, Borromeo, and Maderno evolved in architecture, and Guercino, the Caraccis and Claude Lorrain in painting, derived its inspiration directly from Michelangelo's ceiling in the Sistina, and the Moses in San Pietro in Vincoli. It is the expression of ecclesiastical pomp and Spanish ceremonial blended with the desire for nature's lines and the feeling of space; and how wonderfully the seventeenth-century churches are in harmony with the ruins of old Rome, and how little there would remain of what Rome actually is, were we to eliminate the baroque and limit our admiration to its classic and mediæval period. Styles are also very much subject to fashion. In Venice, where the "Byzantine Gothic" is the foreground, with a flavor of the early Renaissance, the eighteenth-century buildings were at one time considered the glory of the city, and St. Mark's was characterized as "barbarous Gothick." And it was this period which evolved Tiepolo, Canaletto, Guardi, and Longhi, painters who in their respective work express so vividly the joyous, careless life of pleasure of their time.

The great point insisted on by our author is that we should understand how literature and art and nature and history are blended together and go to the making of each city; and that we find in the backgrounds of old masters of the fifteenth century the life that went on around the artist very truthfully depicted, while the foregrounds, with their holy families, saints, and donors, are merely conventional. We are warned against dividing ourselves into the two camps of Gothic and classical art; rather to keep our minds open to the appreciation and understanding of all that is good of whatsoever time.

In the chapter on "Picturesque Milan" we are given a very good description of the Portinari chapel behind the choir of Sant' Eustorgio; the mausoleum of Saint Peter Martyr, one of the most exquisite achievements of Italian art, and till quite recently very little visited and known. The combination of Michelozzo's design and reliefs with Vincenzo Foppa's painting is very remarkable in harmony of line and for pure iridescent color scales of pale red and blue overlapping each other like the feathers on the breast of a wood-pigeon. The terra-cotta frieze of angels dancing and swinging between them large bells of flowers and fruit is a theme of complete joyousness, quite unique in design. In the chapter on Milan, too, we get a good account of that pilgrimage church of the Madonna of Saronno, which all lovers of Luini and Gaudenzio Ferrari should visit, although these Luinis are rather in his latest manner, after he had fallen under Raphaelesque influence, while those of San Maurizio Maggiore are more characteristic of his peculiar charm.

Another excursion of great interest is our author's quest among the hills between Volterra and the Arno for the monastery containing a series of life-sized terra-cotta groups representing the scenes of the Passion, supposed to have been the work of a blind modeller of Gambassi, an artist of the seventeenth century, named Gonnelli. These groups were found at San Vivaldo, a monastery which the Italian Government had restored to the Franciscan order, San Vivaldo having been a follower of the Poverello during the latter half of the thirteenth century. Mrs. Wharton had the satisfaction of establishing their attribution to an earlier epoch than that of Gonnelli, the close of the fifteenth, or beginning of the sixteenth century, recognizing at once in them far greater artistic quality than they were supposed to have possessed.

Notes from a Diary; 1896 to 1901. By the Right Hon. Sir Mountstuart E. Grant Duff. 2 vols. E. P. Dutton & Co. 1905.

With these, the thirteenth and fourteenth of his published 'Notes'; Sir E. Grant Duff brings to a close that amazing diary which he began to issue about five years ago. Amazing, we call it, because his fourteen volumes are merely a selection from the whole record, which must be a leviathan among personal diaries. Grant Duff was in his day a well-known though never a distinguished figure in English politics and administration; but this side of his life, obviously the most interesting to the reader, he has rigidly excluded from his 'Notes.' "I have carefully avoided the chief interests of my life," he tells us in the preface, with what would almost amount to insolence were it not rather peculiarly British naïveté. The reader is therefore to understand that these copious notes are only the by-products; for the man's real interests he is invited from time to time to consult the newspapers of the day. The minor interests of the five years that we are now to consider are not, of course, of the strenuous kind, since the diarist's active years were ended. The collecting of plants and precious stones, dinners and breakfasts at certain literary and political clubs, and the anecdotes and reminiscences of elderly contemporaries collected even more assiduously than the plants and gems—this is the substance of Grant Duff's discreet pages.

Among the pupils of Jowett there has been more than one who, having attained to high honors in public life, has counted it not the least of his distinctions that he was "a pupil of Jowett." But though Grant Duff came under the influence of the Socrates of Balliol for three years of his Oxford life, he repudiates the notion that he owed anything to the intercourse. "We were always on the best of terms; but I am not conscious of having received much from him." This reminds us of a certain undergraduate who, after an evening with Jowett, wrote the following: "He asked me if I would have a glass of wine, so I poured out a glass of wine and drank it; then he asked me if I would eat an apple, so I ate an apple. But he said nothing and I said nothing. I'm told that he asks you to wine

that he may find out what sort of a fellow you are, but I wasn't going to let him see what sort of a fellow *I* am." We may be sure, however, that this engaging youth never lived to write like Grant Duff on Jowett: "We arrived at very similar conclusions upon many of the great subjects that have interested our times, by totally different though not distant paths."

We should be sorry to have to count the number of times in these two volumes that their author "dined at Grillion's," the London club at which both the leading men of both political parties meet and dine together with the avowed aim of averting social estrangement. By the time the industrious reader has reached the close of the diary he will find himself able to reconstruct a dinner at Grillion's, to put the right man in the chair, to seat half-a-dozen peers in their favorite places, and to give a typical conversation. Nearly all Grant Duff's anecdotes were gleaned at these dinners, and, if we may believe his reports of them, the conversation of English politicians consists almost entirely of rather pointless stories. But his reminiscences are colored by his conviction that "the most agreeable conversation is that which brings new grist to the mill of one's intelligence, in the shape of something one did not know before," and discussion was not likely to thrive in his immediate neighborhood. Occasionally the anecdotes are worth quoting:

"An Irish private went to ask his colonel for a week's leave, on the ground that he had been exceedingly useful to his wife at her spring cleaning the year before, and that he should like to be so again. 'It would give me,' said the colonel, 'the greatest possible pleasure to grant your request; but I am sorry to say that I have received a letter from your wife to say that you were of no use to her at the spring cleaning, and she hoped you would not get leave.' . . . 'There must be,' rejoined the man, 'two of the greatest liars in the world in this room, for I never had a wife.'"

The story of the death of Ollendorff also is well invented. He was dying, when a bystander caught these words: "Je meurs. On peut aussi dire, je me meurs." But an earlier pedantic decedent had said, "Je m'en vais, ou je m'en vas; l'un et l'autre se dit." That is an excellent story of Cecil Rhodes told by Lord Acton at a meeting of the Breakfast Club. Rhodes had asked him: "Why does not Mr. Theodore Bent say that the Zimbâbwe ruins are Phœnician?" Acton replied: "Because he is not quite sure that they are." "Ah!" said the other, "that is not the way that Empires are founded."

On page 8 of the first volume Grant Duff gives a curious explanation of the familiar word "doyly." It is that the family of D'Oylys "once held the Castle of Oxford and very broad lands in the neighborhood; the obligation being to defend the same against all comers, while the formal act of homage was the presentation every year to the King of a small tablecloth to be used at dinner." If this be the true derivation of the word, it has escaped the editors of the Oxford Dictionary, where it is stated that the doyly is so named from one Doyly, a linendraper, who kept a famous shop in the Strand. We have not elsewhere met with the statement (on page 120 of the same volume) that the line in Gray's Elegy regularly printed:

"Await alike the inevitable hour"

ought to read

"Awaits alike the inevitable hour."

hour being in the nominative.

The memoirs of a moderately interesting man can be made very interesting indeed if their author has the gift of reporting and has been in close contact with the great men of his day. Grant Duff, in his long life, has known everybody in London worth knowing, but, as he is too scrupulous to use personal gossip, however harmless, and, according to his plan, ignores the great questions of the day (the Boer war for instance, is barely mentioned in his 'Notes'), he has missed his chance of being the Greville of his generation. This is a real loss to posterity, for he had all the opportunities of a Greville.

The Young Folks' Cyclopædia of Natural History. By John Denison Champlin, with coöperation of Frederic A. Lucas. Henry Holt & Co. 1905. 8vo, xvi, 725 pp. Ills.

This is one of a series of cyclopædias for the young. In it the author has endeavored to compile in inexpensive form a book of reference in which may be found the main facts in regard to animals concerning which information is sought. The general plan adopted is to give the scientific facts regarding each animal's place in nature, its family or genus; an account of the important species of each group, with indication of the habitat, individual history, and habits of each, and pertinent information bearing on its origin, relationship to other forms recent or fossil, its relations to man, methods of hunting or capture, domestication, and such economic products as may be derived from it. The author is of opinion that he has furnished "an outline of the entire animal kingdom, from the largest mammal down to the tiniest insect," and that "no important branch or class has been neglected, and the fauna of no one part of the world has been selected to the exclusion of that of another part." This is claiming a good deal, and much depends upon what significance is given to the word "important."

We find the Cyclopædia quite full in the matter of vertebrates, especially mammals and birds; and the close examination of a number of selections at random reveals no serious errors. One would have thought the lowest vertebrate, *Amphioxus*, important enough to deserve a figure and an entry in the index, but its scientific name does not occur, and a few lines under *Leptocardii* give a very insufficient idea of the animal. Without conspicuous inaccuracy, the information in groups lower than the vertebrates declines rapidly in quantity and quality as we descend in the scale. This is perhaps natural, as the adequate presentation of such groups requires a grasp and knowledge not to be expected in an ordinary compiler without scientific training; and the defect would not have been particularly dwelt upon here except for the undue pretensions of Mr. Champlin's preface.

The text in general shows little systematic grasp in the arrangement of facts, either in the articles as a whole or in any article in particular. Most of the conceded facts may be found by hunting for them, but they do not appear to be stated in any determined order, rather, as it were, haphazard. The accounts of such animals as ants and bees are lacking in freshness, though correct enough in a general way. The text throughout bears testimony to painstaking compilation rather than to ready knowledge.

There are more than eight hundred illustrations, many of them derived by a process of reduction from the uncopyrighted treasure-house of Brehm's 'Thierleben,' which has served to enrich most American works of this class for many years. It is needless to say that they are good, even when they recall the "rich jewel in an Ethiop's ear." However, all things are relative, and for certain purposes and people this volume may have a value which justifies its publication, and may ensure its success.

International Law. Part I.: Peace. By John Westlake. Cambridge (Eng.): University Press; New York: Macmillan. 1904.

Mr. Westlake, who is Whewell Professor of International Law at Cambridge, is well known as a writer on international law, both private and public. In his preface he speaks of his intention to follow this volume by another on international relations as affected by a state of war, and perhaps in this he will include all the questions grouped under the heads of Neutrality and the Law of Prize, thus completing a work which will have the scope of the Law of Nations as a whole. He rather unnecessarily disclaims all design of producing an "encyclopædia"; his present volume is a small and compact collection of essays which challenges comparison at many points with the work of the systematic writers who have followed in the footsteps of Grotius. At the same time he wishes it to be noticed that his treatment is not "deductive," for while he admits that such a treatment "might start from State sovereignty or from the assertion of certain rights as inherent in a State," he seems to be of opinion that it would lead in many cases to no result "unless the starting-points were defined with a precision only attainable by embodying the conclusions in them." Not being deductive (and the professedly historical method being also excluded), it follows that the volume is mainly descriptive of the actual state of international law, and the topics embrace a "General View of International Law," "The Sources and Principles of International Law," "The Classification of States," "The Origin, Continuity and Extinction of States," "The Title to State Territory," "Rivers," "The Sea," "Territorial Waters," "Nationality and Alienage," "National Jurisdiction," "Diplomacy," "The Political Action of States," "The Protection of Subjects Abroad," and "International Arbitration."

We have been much struck with what Mr. Westlake has to say on the last head. His analysis of the difference—difficult or impossible to define, yet very substantial—between "legal" and "political" questions, is very good, and throws light on the vexed question of the proper scope of arbitration treaties. So, too, the chapter on "The Protection of Subjects Abroad" is valuable, though here, if we are not mistaken, the author's method is not very advantageous to a satisfactory solution of the questions involved. What we crave here is precisely "deduction"—the key in some principle

of the true view; for the practice of States tends rather to obscure the matter than to clear it up. Is there any difference between deliberate fraud practised by a sovereign State on foreign bondholders and an ordinary maritime tort? Is one to be redressed, and the other ignored? Here, certainly, the rule of "equal treatment with nationals" cannot help us much; it could hardly be an answer to such a claim that the sovereign State had also deliberately repudiated the bonds held by its own citizens. The author's remarks on this subject seem to us wanting in clearness. On the other hand, Mr. Westlake's account of Title by Discovery and Effective Occupation is an admirable one, both for clearness and for brevity. We have not space to go into such technical matters as alienage, nationality, the *jus soli* and *jus sanguinis*, and domicile. On this whole range of questions, Mr. Westlake's standing is well known.

Manuel d'Assyriologie. Tome Premier. Par Charles Fossey. Paris: Ernest Leroux. 1904. Pp. xiv., 470.

This is the first volume of a work of ambitious scope. In his preface, M. Fossey complains that while few sciences have in the last few years made such rapid progress as Assyriology, and few can promise more rapid progress in the years to come, from lack of some central, systematic publication it is impossible for the student to ascertain, without infinite searching of journals and reviews, the state of any question Assyriological. There is to-day no general review of Assyrian-Babylonian literature, no complete résumé of the innumerable geographical data contained in that literature, no inventory of the texts relative to any one of the divinities of the Assyrian pantheon, etc. M. Fossey proposes, if he finds sufficient support, to make this Manual of Assyriology a central publication, up to date, of everything which pertains to Assyria and Babylonia.

In the present volume he discusses explorations and excavations, the decipherment of the cuneiform text, and the origin and history of cuneiform writing. Others, as, for instance, Rogers and Hilprecht, have given a general survey of explorations and excavations from the earliest time onward, and of the history of the state and interpretation of the cuneiform text; but no one has produced so complete and so systematic a survey as Fossey in the present volume. Commencing with Benjamin of Tudela, he gives a list of all who are known to have journeyed in Babylonia, Assyria, and adjacent regions belonging to the Assyrian-Babylonian civilization, and who have left any record of their travels or explorations, with a brief statement of what they did. The first book closes with a list of the principal Babylonian-Assyrian epigraphical monuments, arranged according to their place of origin. While the title-page bears the date of 1904, the list of explorations closes with the year 1902, and does not, therefore, include the last American expedition to Bismya, undertaken under the auspices of the University of Chicago, the latest work of the English at Nineveh, the latest results of the German and French expeditions in Assyria, Babylonia, and Persia, or the Assyrian-Babylonian discoveries in the Austrian and English excavations in Palestine, which should be included, according to the scope of the work. As a book of complete reference it is, therefore, already out of date.

The second book deals with the decipherment of the various forms of cuneiform script, Persian, Susian and Assyrian-Babylonian, collating first the references to cuneiform writing in classical authors—Herodotus, Thucydides, etc.—and then of modern travellers. The history of the actual decipherment commences with Grotefend. In his interest in Grotefend's work in deciphering the Persian cuneiform, M. Fossey quite loses the sense of proportion. Grotefend's work was remarkable chiefly because it so long antedated the actual decipherment of the inscriptions; practically it had little effect. His original paper was read before the Göttingen Academy in 1802; it was not actually published until 1895. The real decipherer of the Persian cuneiform was Sir Henry Rawlinson, whose work was published in 1846-49. Yet only two pages are devoted to Rawlinson, and nearly twenty to Grotefend. Even Lassen has a place several times larger than that assigned to Rawlinson. This is due to the author's interest in the beginnings of decipherment, whether productive or not. Similarly, in the chapter on the decipherment of the Assyrian-Babylonian writings, excessive space, so far as practical results are concerned, is given to Botta, Saulcy, and Hincks.

The third book deals with the origin and history of the cuneiform characters. The greater part of this section is devoted to the discussion of the curious Sumerian controversy. Halévy, it will be remembered, contended that there was no Sumerian language, and that the inscriptions supposed to be Sumerian were really Semitic-Babylonian written in a hieratic script. Inasmuch as the controversy is now settled in favor of the Sumerian origin of the Babylonian cuneiform, the author scarcely needed to devote one hundred pages to a report and discussion of Halévy's peculiar theories.

Following these three books is a condensed and convenient bibliography arranged according to chapters, complete up to 1902, but containing also some references from 1903 and 1904. The book is also furnished with an index, and a map (which the author says that he had much difficulty in preparing, owing to the peculiar nature of the material available), the single object of which is to illustrate the history of the explorations and excavations. We have not noted, in our examination of this map, the omission of any place of importance.

The value of this work is as an encyclopædia of ready reference, and it is to be regretted that the author has sometimes lost sight of that fact.

GINN & COMPANY, Boston

An Old Man's Idyl

"IT is a restful, sincere, intimate piece of work, and relates in unvarnished language the story of the life of an ordinary, fallible man who walked along the highway of life with more contentment than dissatisfaction.

"The book has a friendly face, like that of a good man or woman, and one greets it with emotions of companionship. The tranquility and wholesomeness indicates that the writer is of the opinion that all periods of life hold their blessedness, their charm, and their dreams."—*Chicago Tribune.*

"It is a quiet story for a quiet hour, and seems, somehow, to fall like the gentle rain upon tired nerves and anxious minds."—*The Reader Magazine.*

"An Old Man's Idyl" is a middle-aged love story—a belated romance—and will appeal strongly to fathers and mothers.

Mr. A. V. Dicey's The Relation Between Law and Public Opinion in England During the Nineteenth Century

By A. V. DICEY, K.C., of the Inner Temple, Vinerian Professor of English Law, Oxford, Author of "Introduction to the Study of the Law of the Constitution." *Cloth, 8vo, 502 pp., $3.00 net (postage 19c.*

Those who remember his illuminating lectures at Harvard a few years ago will be glad to find them reconsidered and rewritten in this book. By studying the development of modern law in connection with the course of modern thought a new interest and meaning is given to what at first sight may seem a mass of illogical enactments.

Mr. Arthur K. Kuhn's *translation of* **Professor Meili's International Civil and Commercial Law**

By F. MEILI, Professor of International Private Law in the University of Zurich, Delegate of Switzerland to the Hague International Conferences. Translated and Supplemented with additions of American and English Law, by ARTHUR K. KUHN, Member of the New York Bar.

The only book on the subject which includes the important changes of the last few years; "an invaluable work for all English-speaking practitioners and students," says the *New York Herald.* *Cloth, 8vo, $3.00 net (postage 18c.)*

T. R. Jernigan's China in Law and Commerce

"The book is packed with concise, important, and practical information . . . that will be helpful to every one who intends to deal in any way with the country or the people."—*New York Sun.* *Cloth, 12mo, $2.00 net (postage 13c.)*

Dr. J. A. Fairlie's National Administration of the United States

"Important and authoritative, . . . indispensable to students of American Government."—*Pittsburg Gazette.*
Cloth, 8vo, 274 pp., $2.50 net (postage 18c.)

Mr. Herbert Paul's A History of Modern England

To be complete in five volumes. *I-III., now ready, each $2.50 net (postage 16c.)*

"The author's summaries of political, social, scientific, and literary events are of surprising interest and value."—*N. Y. Sun.*

Mr. William Roscoe Thayer's A Short History of Venice

Cloth, $1.50 net (postage 15c.)

"The truest interpretation of Venetian history ever furnished in a compact and inexpensive work."—*Boston Advertiser.*

Mr. James Ford Rhodes's History of the United States

from the Compromise of 1850. *In Five Volumes. Cloth, 8vo, $12.50 net*

"The nearest approach yet made to an adequate account of the momentous period which he has undertaken to depict."
—*The Sun*, New York, N. Y.

E. Levasseur's Elements of Political Economy

By THEODORE MARBURG, M.A. Portions of the treatise were rewritten by the author for this translation; other additions and changes made by the translator himself were approved by the author. *Cloth, cr. 8vo, $1.75 (postage 13c.*

Dr. Hermann Schultz's Outlines of Christian Apologetics

FOR USE IN LECTURES. Translated from the revised and enlarged edition, 1902, by ALFRED BULL NICHOLS, Professor of German in Simmons College. *Cloth, 328 pp., 8vo, gilt top. $1.75 net (postage 12c.)*

Edward FitzGerald By Mr. Arthur Christopher Benson

Mr. Benson's "Rossetti," in the same series, issued last year, won especial favor for its sympathy and clearheaded view.
In the "English Men of Letters" Series. *Cloth, 12mo, gilt top, 75 cents net (postage 8c.)*

Prof. L. H. Bailey's *new book* **The Outlook to Nature**

is very stimulating reading, urging the sane and wholesome practice of "setting the mind toward nature." *Cloth, $1.25 net (postage 11c.)*

FOR VACATION READING TAKE THESE NEW NOVELS

Mr. Jack London's *new novel* **The Game**

"In rapidity of action, forceful style and gripping interest, it is one of the most notable of his stories. The plot is simple and of increasing power and fascination."—*Plain Dealer.* *Specially attractive in form, with illustrations in color and many drawings. $1.50*

Mrs. Nancy Huston Banks's The Little Hills

is restful in its suggestion of shaded roads, fragrant with far-away Summer scents. Its people are loving and lovable, groping up their little hills of life, lifting up their eyes, each to his own honest, earnest, pathetic, amusing ideal. *Cloth, $1.50*

Charles Egbert Craddock's The Storm Centre

is a very readable story of flirtations and love in an old-time Southern household within the lines of the Federal Army. Actual fighting does not enter the story, but the war is its background of mystery and dramatic adventure. *Cloth, $1.50*

Miss Elizabeth Robins's A Dark Lantern

"is a book no discriminating reader can afford to leave untouched." *Boston Herald.*

"is a most extraordinary love-story . . . which never flags in its interest." *Chicago Tribune.*

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave., N. Y.

The Nation.

NEW YORK, THURSDAY, JUNE 29, 1905.

The Week.

President Roosevelt has laudably announced to the State Department and to the diplomatic service that "the purpose of the Government of the United States is to show the widest and heartiest courtesy toward all merchants, teachers, students, and travellers who may come to the United States, as well as towards all Chinese officials or representatives in any capacity of the Chinese Government." No President hereafter can openly take a different attitude, not even if he be the especial choice of the Pacific Coast labor unions; and if under such an Executive the practice once more becomes as disgraceful and uncivilized as of late, the representative of China at Washington need only point to this letter of President Roosevelt to prove that the Chinese Empire has the right to demand better treatment. It is true that the President might have moved sooner, and that he did not act until compelled by a rising tide of popular indignation at the insults to which educated Chinese have been subjected in our gates, and by the growing fear that the country is confronted with a serious boycott in the East. Now that it appears that even the long-suffering Chinese will turn at last, there has been a sudden awakening. Even on the Pacific Coast it is felt that something must be done, unless a magnificent trade is to come to an abrupt end. The Portland, Ore., Chamber of Commerce, for instance, has become conscious that insisting on the Open Door in the East and boasting of our possessing in the Philippines the commercial key to Asia are not going to sell a dollar's worth of American goods in China if the boycott takes effect. As for the South, it has promptly developed a foible for the Chinaman which is in striking contrast to its feeling for the negro. The reason lies herein: Southern millowners are not unaware that three-quarters of their products are sold in China, and that the boycott would cripple an industry which has been built up against great odds until it is the particular pride of the South.

The list of Secretary Taft's Philippine party, now published, shows that twenty-eight Senators and Representatives have been willing to give up their summer and pay all personal expenses, except their transportation, on the trip for the sake of some first-hand knowledge about our Eastern dependencies. It is perhaps a good thing that the party is made up so largely of members who have not been prominently identified with the Philippine issue in the past, for the most to be expected of the trip in any case is an awakening of interest in the affairs of the archipelago among just such men. As a matter of fact, only two members of the Senate Philippine Committee and two of the House Insular Affairs Committee are in the number. Senator Lodge, chairman of the former committee, remains at home. Not one of the Senators belongs to the powerful inner circle of the Senate, while the House triumvirate is represented by the Hon. Charles H. Grosvenor alone. Chairman Payne, of Ways and Means, and Foss of Naval Affairs, in the House, may find this a valuable experience, for both these committees have to deal with Philippine subjects, the former in the supremely important tariff question. It may also be remarked that with Bourke Cockran, De Armond, Grosvenor, and other famed debaters among the party, whatever the excursion may develop, the stay-at-home members of Congress and the people at large may look forward confidently to hearing all about it later on.

The first trial of Oregon's new primary law brought out one curious characteristic of the electorate which is evidently an outgrowth of former political conditions. When the direct primaries for Mayor of Portland were held, it was taken for granted on all sides that the Republican nomination was equivalent to election. After an energetic campaign, it will be remembered, the Mayor then in office, Williams, was renominated by a minority of the primary vote. The vote in the Democratic primary was extremely small. But on election day the anti-Williams Republicans voted for the Democratic candidate and elected him. Even such papers as the *Oregonian*, which believed in the new law, protest that this unlooked-for result lays the direct primary open to fair criticism. The Republicans had a chance to defeat an unfit candidate in their own primary, yet, in fact, they treated a nomination which they had a hand in making exactly as they would a nomination forced upon them by a boss, and bolted the ticket freely. It is evident that Oregon's voters do not regard participation in the primary as equivalent to a pledge of support to its nominees. Yet, if this is an objection at all, it applies equally to the caucus and convention system. Here in New York, for instance, to enroll for the primaries, a voter merely states, in effect, that he is in general sympathy with the principles of one party or the other. He is just as free legally and morally to "bolt" as the Oregonians have shown themselves to be.

The view that a sympathetic boycott is a criminal conspiracy is sustained by a temporary injunction granted at San Francisco. Because a local firm dealt in the goods of Dietrich E. Lowe & Co., the boycotted hatters of Danbury, Conn., the California State Federation of Labor and the San Francisco Labor Council warned all persons to abstain from buying of the firm that admitted the "unfair" hats to its shelves. In other words, labor unions in no way connected with the dispute between the Lowe Company and its employees are endeavoring to destroy its business at a distance of three thousand miles. In granting the temporary injunction, Circuit Judge Morrow opined that the unionists had no right, in their warfare with an employer, to injure an innocent third party, and that collective action of this sort was presumptively a criminal conspiracy. In this connection one should note that in almost all cases brought to adjudication the courts have made short work of labor sophistries based on false analogies of warfare. By the laws of war nothing would be more justifiable than to cut off an enemy's supplies, but the common law gives to the individual citizen something more than belligerent rights. Though Judge Morrow's opinion is merely casual, it is welcome, because it advances by so much the campaign of a Danbury firm which for several years has made a plucky fight for the right to conduct its own business.

A significant decision in support of the open-shop principle was that handed down on June 21 by the Supreme Court of Massachusetts in the case of Michael F. Berry against Jerry E. Donovan. Donovan was a member and an officer of the boot and shoe workers' union, with which Hazen B. Goodrich & Co. of Haverhill made a contract last January to employ only union labor. After the signing of the contract, it was found that Berry was a non-union worker, and Donovan asked that he be discharged. This was done, and Berry's suit against the union was begun. The trial court awarded damages of $1,500, and the union appealed from the verdict on the ground that Donovan's action was justified because he acted merely in accordance with the contract based upon the fact that "his action was a kind of competition between union help on the one side and non-union on the other, or between employees on the one hand and employers on the other." The Supreme Court, however, has decided that Donovan's action tended to suppress competition and create a monopoly. It will be noted that this decision is contrary to the recent decision of the New York Court of Appeals, which decided, in effect, that any attempt to extend

union influence by combination was legal so long as it was peaceable. Society is slow to realize that "peaceable" is inapplicable to the methods of unionism, which is organized warfare with all the concomitants.

The proposal of a "benevolent corporation" to monopolize the retail sale of liquor in Los Angeles suggests inevitably the less ambitious plan now on trial in the Subway Tavern here. It is, in fact, an attempt to do in an American city where, after our plan, the seller of liquor and not his place of business is licensed, what has sometimes been accomplished in English towns, where the licenses go with a certain limited number of public houses. The Los Angeles plan contemplates the purchase of the fixtures of the 200 saloons, the compensation of their owners for the "good will" of the business, and then arbitrary closing of 125 of them. In the residential districts the saloons will be converted into "coffee clubs," while in the neighborhoods of mills and factories only beer and light wines are to be sold. The city will be guaranteed a revenue equivalent to a license of $2,480 a year from each of these proposed seventy-five saloons, or $930 for each of the 200 to be bought out. The corporation will restrict its profits at the same time to 6 per cent., and put all above that return into public improvements. This scheme is brought forward at a time when in South Carolina and other Southern States there is a strong movement against the dispensary system, and in favor of either prohibition or high license under careful restrictions. The notion of monopoly, either public or private, as a solution of the liquor problem, has certainly made but little headway of late. Still, if the Los Angeles plan is adopted by the City Council, the results will be very well worth watching.

It was quite inevitable that the Insurance Department's highly incriminating report on the practices of the recent Equitable management should be followed by prosecutions. Investigation by the responsible State official finds that the law had been flagrantly and repeatedly violated, and for purposes of illegal personal gain; the necessary result is that the law department of the State should move to recover for the company these illegal profits, and to impose any civil penalties to which the guilty persons should be found subject. Attorney-General Mayer remarks, in outlining his purposes of procedure, that "it might be to the interest of policyho'ders to learn the character of and occasion for some of the legal services pa'd for during the last few years." We sincere'y trust Mr. Mayer will pursue this line of investigation diligently. It will naturally lead him at once to the trail of Chauncey M. Depew, who, while not a lawyer in active practice, and while occupying a place on the Equitable's board of directors, has been receiving a salary of $20,000 per annum. The only service discovered by Mr. Hendricks to have been rendered by Senator Depew in return for this modest honorarium was his achievement, two and a half years ago, of adding $25,000 each to the salaries of Mr. Hyde and Mr. Alexander—an increase not asked by the president. Whether Mr. Depew has rendered other services, such as warding off investigation, by public authorities, of the illegal practices of officers whose salary he had managed to get increased, might come to light in such an inquiry. The Senator's "impassioned plea for harmony," at the February meeting of the Equitable board, when the coming exposure of the crooked official practices was plainly in the air, suggests one way in which he may have deemed himself to be earning his $20,000.

In his advice against the building of over-costly college fraternity houses last week, President Faunce of Brown put his finger on one of the lines in which the scale of undergraduate expenditure has most strikingly increased of late years. But there is a reason for it. To begin with, it was demonstrably a good investment for some twenty or thirty young men of common tastes and interests to rent a house and run it coöperatively. The next step was for some young men to arouse the pride of the alumni and pledge the credit of future college generations to build a house of their own. And the temptation to go beyond reasonable requirements is really far stronger in a Greek-letter brotherhood than in almost any other sort of organization. In recruiting its membership every autumn it has to compete for the favor of prepossessing freshmen, who have been on the ground so short a time and know the men so little that they are necessarily guided by externals. It is a rule, tested by many successful experiments, that the way to revive a moribund chapter is to beg or borrow somehow enough money to build the best house on the campus. This fault is really inherent in the absurd "rushing" system, under which a student, with comparatively few exceptions, must make his choice between fraternities in his first fortnight at college or not at all.

Mr. Balfour has rallied a majority of 74 against the vote of censure on the army-supplies scandal. It is always a question how far an Administration is responsible for the dishonesty of its agents, and now the monstrous swindle at Pretoria brings discredit to the Government chiefly because they have endeavored, in the face of overwhelming evidence, to hush the matter up. In itself the scandal, as described by the army committee, is remarkable not only for its magnitude, but for its simplicity. Finding at the close of the war that it had on hand provisions for 300,000 men and 200,000 animals, the Government decided to sell the surplus in South Africa. Lord Kitchener expected to make a moderate profit on the transaction. As the plan was executed, stores poured into Pretoria—they should have been sold at local stations—and were knocked down at base prices by the sales department. Meanwhile, the supply department was advertising for supplies. The result was a kind of endless chain, by which the army invariably sold cheap and bought dear. For example, one lot of chaff, erroneously described as "damaged forage," which had cost £2,926, was sold for £481. Meyer & Co., contractors, bought oats at 11s. a hundred pounds from the sales department and resold them at 17s. 11½d. to the supply department. These are sample findings of a report which was restricted to half-a-dozen cases that had become notorious. The most discouraging feature of the matter is the undoubted collusion of army officers with the contractors. This scandal has been trying to come to light for three years, and has been as regularly stifled. It will be thoroughly investigated by a Parliamentary committee, and until the whole matter is revea'ed one cannot tell whether Mr. Balfour's partisan vote of confidence is in the nature of a vindication or of a reprieve.

It is reported that the Kitchener plan for the reorganization of the Indian army is slated to pass the Commons. Such action would end a long-standing controversy between the Commander-in-Chief and the Viceroy in favor of the former. Lord Curzon, supported by the Council, has been willing to abide by the present provision of 80,000 men under arms; Lord Kitchener has, almost to the point of insubordination, pressed a plan for a standing force of 140,000 and a large increase in the estimates. Since the dispute has degenerated into the usual stubbornness on the part of the civil authority, jealous of its prerogative, and contemptuousness on the part of the military, the acceptance of the Kitchener project would be a severe blow to the Curzon Government. Lord Kitchener's correspondence is remarkable for soldier-like frankness. Salisbury himself never spoke more assuredly of the prospect of Russian invasion, and now England is asked to keep her Indian army permanently on a war footing. The whole project seems to represent militarism run mad. Nothing has been more clearly proved in the past year than the inability of Russia to conduct an aggressive campaign. It may be assumed that a few regiments could hold the northern passes of India and Afghanis-

tan for an indefinite period. In fact, it might fairly be maintained that the defence of India is primarily a diplomatic or cartographic problem. That is, if the Home Government would once draw the line of first defence—delimit, in a word, the British sphere of influence—there is little question that the present army would meet any immediate demands of defence. The rumored success of the Kitchener programme is important chiefly because it marks Lord Curzon's first serious rebuff, and because, while straining the military budget, it shows lamentably that Great Britain is oblivious to the argument for reduction of armaments furnished cogently from the battlefields of Mantchuria. Meantime, there is a rumor of Lord Curzon's resignation.

It is a curious shift that transfers to German use the taunt "*perfide Albion*," while the French papers abound in cordial expressions towards a potential ally. As a matter of fact, the charge that England has deliberately plotted against the greatness of Germany must rank with the wildest fancies. One must regret that Professor Schiemann, an adviser of the Kaiser and Prince Bülow in the Moroccan affair, speaks publicly of a plot between English, French, and Russian politicians to humiliate Germany. Such a statement, so far as England is concerned, misinterprets, as of political import, a certain unmannerliness. That the tone of the British press has been contemptuous towards Germany is undeniable. One can understand that this would be resented widely in the Fatherland, and it is surprising only that any one in the diplomatic circle should cite these international infelicities as a serious explanation of the Moroccan affair. It is to be feared that the snarling of the English press is taken into consideration only because in high quarters at Berlin delusions of greatness—always an irritating malady—abound. However that may be, Germany cannot fail to see that England is beginning to acknowledge her mistake. Comment on the Moroccan affair has been singularly moderate, and even favorable to Germany. It is symptomatic that the ever-judicious *Economist* accompanies its editorial article, in which it takes the orthodox view that the Anglo-French Agreement must be defended at all hazards, with another article in which full credence is given both to the aspirations of Germany in the Mediterranean and to the peacefulness of her intentions. All of which suggests that there are, happily, recognized atonements for a lapse in manners.

Statistics of strikes in France for the year 1904 have just been published by the Bureau of Labor at Paris. There were in all 1,026 strikes—nearly double the number for 1903. The strikers numbered 271,097, and were employed in 17,250 establishments. The loss of labor amounted to an average of eighteen days for each striker. As an offset to the great increase in totals may be noted the short duration of strikes in 1904, of which 36 per cent. lasted a week or less. Similarly, the long-sustained dockers' strike at Marseilles makes the figures for last year look rather worse than they are. An innovation, for which the way had been paved in Italy, is the formation of agrarian unions, which have ordered on the vineyards and elsewhere no less than 129 strikes, affecting 10,515 employers. In more than half the cases a demand for higher pay caused the dispute; in about a quarter, demands for the dismissal or restoration of laborers. The general wastefulness of the strike as a means of industrial reform is attestel by the ratio of strikes that ended in a compromise, 38 per cent., or in a total failure, 33 per cent., to the 29 per cent. that succeeded.

The plan for a so-called "Business Ministry" has utterly failed in Hungary. Premier Fejervary, who announced himself to the Diet as an *ad-interim* official, bent only on conducting arrears of routine business prior to prorogation, was indignantly hooted down after the most approved Magyar precedents, and was not allowed to read the Royal writ of prorogation until a vote of no confidence had been passed on his Ministry as of an "unparliamentary and unconstitutional character." In view of this action, the Emperor-King has no alternative but to order new elections, or appoint a Premier committed to the programme of the coalition majority. What that programme is, Count Apponyi tells very frankly in a recent number of *Die Nation*. The Independence party in the Diet will accept nothing less than independent Hungarian customs, the national flag and word of command in the Hungarian army, and the revision of the electoral system. Since the King will not concede so much to the Independence party, the deadlock is complete. In fact, the parallel with the recent condition in the Norwegian Storthing is instructive. There, King Oscar, finding himself flatly opposed to the plan for separate Norwegian consuls, as passed by the Storthing, declined to name a new Prime Minister after the resignation of the old. In Hungary, the King takes only a less uncompromising attitude by trying to appoint prime ministers who are unacceptable to the majority, on the ground that such appointments are of a non-contentious and temporary character. There is no way out except a concession on one side or the other. At present there is little prospect of a moderate Hungarian party, and new elections would, it is predicted, merely strengthen the Kossuth party and make it less dependent on the other Parliamentary groups.

Rioting and slaughter at the Polish city of Lodz and revolutionary manifestations at Warsaw follow with ironical promptness assurances that the reform ukase had settled the Polish question once for all. As a matter of fact, the reform of land tenure and the proclamation of religious toleration are of little interest to international socialists, who, working in the mills, hold no land, and frequently profess no religion. It has been the fate of reform from above to be too late, and to fail to include the dangerously disaffected classes. What is needed to reduce the discontent is some clear utterance of the Czar's intentions. As things stand, hope finds no resting-place, and discontent has a whole vague world to occupy. For example, when the Czar's brave and friendly words to the delegation of the Moscow zemstvoists were interpreted in too liberal a sense, what was done? The necessary official explanation merely stated that no truly democratic parliament was intended, and that the principle of autocracy would be upheld. Where an announcement of the precise form of national assembly approved by the Czar might have disarmed criticism, all was left vague, and the way was again opened to distrust. Anarchy in Caucasia and in Poland merely expresses the dangers to which an empire is subject when its subjects are sure they are oppressed but the Emperor is not sure of his own mind or powers.

The most striking feature of the zemstvoists' address to the Czar on Monday week was the statement of their unanimous belief that representation in the proposed national legislature should not be according to classes, and that nobody should be excluded from representation on account of race or religion. "You are the Emperor," said Prince Trubetskoy to the Czar, "not of the landowners, merchants, or peasants, but of all Russia," and he then proceeded in brave fashion to plead for freedom of speech and publication in regard to the promised popular assembly. If this is granted—and the publication of Prince Trubetskoy's speech foreshadows the consent of the Czar—the Russian Jews will surely be heard from. Discriminated against enough in all conscience, they have not unnaturally resented the suggestion that they should be excluded from a participation in the long-desired Parliament. Indeed, it would be an extraordinary blunder if popular representation were to begin with the disfranchisement of six millions of persons solely on account of their religion. The zemstvoists have correct convictions as well as the courage of them, and should be upheld by all who would see constitutional government set up in a contented Russia.

WHITEWASHING LOOMIS.

Mr. Taft's report on the Bowen-Loomis scandal has, as we anticipated, resulted in Mr. Bowen's summary removal from the diplomatic service. In his case no other decision was possible. Mr. Bowen's counter statement does not excuse his diplomatic indiscretions, but it at least explains them. It appears that more than a year ago he furnished the State Department with evidence of Mr. Loomis's questionable dealings at Caracas, and was driven to make public accusations by the refusal of the State Department to act in the matter. We believe that Mr. Bowen took a very foolish course, but it would be unfair not to admit the provocation, and the whole tenor of Secretary Taft's report on the affair bears out Mr. Bowen's suspicions that Loomis was to be resolutely whitewashed. No reader of the report will be inclined to doubt Mr. Bowen's statement that "Secretary Taft, in conducting the hearing, acted not only as the trial judge, but as counsel for Mr. Loomis." As for new evidence, Mr. Bowen's statement contains very little. We may cite, however, a discrepancy between Mr. Loomis's testimony on the Mercado claim and one of his letters now published by Mr. Bowen. Mr. Loomis had explained his possession of a portion of Mercado's claim as due to "*a mere loan* with assignment of security," but in a letter of August 25, 1900, he explicitly speaks of "the portion of Mr. Mercado's claim *which I bought*," and lays down his lowest terms for satisfaction of the claim. Wherever Mr. Loomis's transactions are touched, something slippery is felt. For example, Mr. Bean of the Bermudez Company, explaining a check given to Mr. Loomis, declares that $244.15 was paid by him to Mr. Loomis "for wines and supplies" left on hand, and finds it necessary to add that Mr. Loomis made the sale "at a very considerable discount." Apparently a mere matter of mutual convenience, this item of the Taft report is suggestive to those who know of Mr. Loomis's avocations at Caracas.

On the showing actually made in the report the retention of Mr. Loomis is nothing less than scandalous. Compare, for example, with the previous specifications of impropriety, Mr. Taft's mild but labored reprimand which closes the document.

> "I cannot say, because I do not think, that the record of Mr. Loomis as Minister in Venezuela, as shown in this record, is such as to disqualify him from service as Minister in the diplomatic service of the United States, but I sincerely hope that his bitter experience in this case makes it unnecessary further to point the moral that one who occupies the position of Minister of the United States cannot afford, in any country to which he is accredited, in which business enterprises must more or less be affected by Government favor and concession, to make personal investments of any sort, or to leave the slightest doubt as to the absence of all personal interest in any matters which he may bring before the Government to which he is accredited."

From these words would any one imagine the sum of Mr. Loomis's offending as contained in the report itself? Let the record speak:

(1.) Mr. Loomis exchanged checks for $5,000 with the New York and Bermudez Asphalt Company—a litigant for asphalt concessions in the Venezuela courts—whose claims he had vigorously pressed. Let this pass for a patent indiscretion; obviously he should have banked elsewhere.

(2.) Mr. Loomis advanced $5,800 to the putative American, Mercado, on the security of contested torpedo-boat scrip issued by the Venezuelan Government. In other words, an American Minister enters into an unexplained note-broking transaction in the scrip of the nation to which he is accredited.

(3.) Mr. Loomis, stipulating that he should first resign as American Minister, agreed with Charles R. Mayers to engineer for an estimated profit of over one million dollars the refunding of Venezuelan loans held by an American syndicate. Of this transaction Secretary Taft says: "He [Loomis] was certainly treading on dangerous ground in bringing his official life so close to a transaction in which, after receiving Mayers's letter, he must have expected to have a great personal interest."

(4.) Mr. Loomis became the agent of a West Virginia corporation organized to obtain mining concessions in Venezuela. Like the exchange of checks with the Bermudez Company, he explains that the transaction was purely nominal.

Now recall that these are not widely separated lapses in a long and otherwise well-spent life. They were typical episodes of a period extending over a few months in the spring and summer of 1900. In a capital which fairly reeks with financial scandal, Mr. Loomis contrived to bank with a litigant concessionnaire, to dabble in contested Government claims, to engage to refund a large portion of the national debt, and to negotiate for a group of mines. Grant that this is the entire record of Mr. Loomis's extra-ministerial activities, concede that he drifted into these dubious transactions merely as a convenience to himself and to oblige friends, still one cannot fail to admit that he is either too guileless for this world or too restless for the diplomatic calling. As for Mr. Taft's statement that Loomis is "cruelly slandered," it is mere fudge; the man who, being put in a position of especial trust, temperamentally blunders into equivocal jobs, has no grievance if the world interprets his gray as black.

How far must a man be smirched before he is too shady for the State Department? To judge by the Taft report, all mere irregularities are condonable and subject only to fatherly rebuke. No one has yet proved that Mr. Loomis has robbed a till or accepted a bribe; accordingly, Mr. Taft opines that nothing "disqualifies him from service as Minister in the diplomatic service." Of such a view one can only say that it fails to recognize any finer standard than that of law. It displays a certain obtuseness to finer considerations of personal honor. It is a characteristic expression of an Administration which in many instances has made "hustle" the sole criterion of public service. Mr. Loomis in the State Department, Paul Morton chief of the Navy—these are not reassuring spectacles to those "decent" people throughout the land to whom Mr. Roosevelt so frequently appeals. In a legal trusteeship we permit no man to serve two masters—that he does it carelessly or out of sheer amiability is no excuse; the law removes him relentlessly. The evidence is abundant that Mr. Loomis was willing to trade on his prestige as an American Minister, and that in the case of the mining concessions he did so do.

Now imagine Mr. Loomis accredited to a foreign chancellery with the Taft report as his credentials—and as containing his official record the report would be absolutely relevant in the premises—can one believe that such recommendation would establish him as *persona grata?* But we need not imagine. He has actually been appointed special ambassador to France in connection with the removal of the recently found body of John Paul Jones. This simply goes to prove that the Administration, when its favorites are concerned, no longer lays much stress upon personal and official integrity in men holding high office. Since it is admitted that Mr. Loomis was selected for this duty *while still under charges*, to many people it will appear more clearly than ever that his acquittal was predetermined. Apparently, we may be thankful that the John Paul Jones ceremonies were postponed for a couple of weeks, or we might have had Loomis representing these United States at the moment when it was an open question whether he, when Minister to Venezuela, was morally delinquent in more than one business transaction. This appointment is an insult to France and to public decency in this country. By his action in the Morton and Loomis cases Mr. Roosevelt gives the lie to all his preaching about the need of upright officials. And what has become of that pet phrase, which so often came lightly from his lips, about having in office only such men as were "clean as a hound's tooth"?

"A MISPLACED SWITCH."

At the very moment on Wednesday week when the President was preaching to college students the value to the country of upright public service, he was destroying the worth of his words by publishing his apologia for Paul Morton. Never in his whole career did the President put his name to such a web of

special pleadings, of casuistical and illogical arguments, as here appear, varied only by an irrelevant excursion into the affairs of the Equitable Life Assurance Society—as if to distract attention from the real defendant. The whole statement is a most disheartening endorsement of a man who is by his own sworn testimony a defiant law-breaker. On his part, Mr. Morton seeks to explain jocularly that it was against his express orders that the Santa Fé continued its illegal rebates in defiance of the courts, by an oversight—"by a sort of misplaced switch," as it were. We have to note a misplaced switch of a more serious kind. No hostile critic has dealt Mr. Roosevelt a harder blow than he has given himself by this extraordinary document. Coming as it does after his action in the case of Mr. Loomis, it ought to be apparent to every unbiassed person that the President's moral sense is not to be trusted whenever the conduct of a personal friend is concerned.

But the significance of the whitewashing is more than that. Mr. Roosevelt has given pledge after pledge to the country that lawbreakers of whatever degree shall be sternly dealt with at his hands, and in the case of the Post-Office grafters he showed how uncompromising he could be. Of late he has been filling the country with his denunciations of those lawless railroad officials who have, by means of favors in the matter of rates, built up Trusts and large corporations at the expense of the smaller shipper, precisely as he had demanded to be allowed to get at the "bad" Trusts. Well, an opportunity was given to him. By sworn testimony before the Interstate Commerce Commission, it was proved beyond a doubt that the Atchison, Topeka and Santa Fé Railroad had illegally conspired with the Colorado Fuel and Iron Company in the year 1902 to the end that, by a secret rebate, the railroad should retain the iron corporation's business. At once, with a great flourish of trumpets, Mr. Roosevelt announced that he would investigate this case, and, to prove his absolute freedom from partisan bias, he appointed as special investigators two Democratic lawyers of the highest standing, ex-Attorney-General Judson Harmon and Frederick N. Judson. These investigators quickly found that beyond doubt

> "The laws have been violated by the traffic officers of the Atchison, Topeka and Santa Fé Railroad Company and those of the Colorado Fuel and Iron Company. The former have by the same acts violated the injunction in that case. The formal proof required to punish them for contempt of court and also criminally, if it shall be thought best to do that, too, can be had *only* by judicial process. This is ready to our hands in the above-named case. The proof elicited before the master will also be available for criminal proceedings against the Colorado Fuel and Iron Company and its officers and agents."

They then appealed to the Attorney-General for authority to prosecute those guilty officials. It is this permission which has been denied to them, with the result that they have resigned in disgust. It has been withheld from them primarily because Paul Morton, whose father sat in Cleveland's Cabinet next to Mr Harmon, was one of the accused men. The President and his Attorney-General seem to have decided, because of their friendship for and belief in the good intentions of this one man, that *all the other guilty officials* of the two companies shall escape prosecution for their openly admitted offences. Thus, W. P. Biddle, freight traffic manager of the Santa Fé, confessed, in 1902, to giving a rebate, and Mr. Morton, his superior, defended his action by saying: "What Mr. Biddle did was *exactly right*, in my judgment. Everybody did just as we did, and they had to, or go out of business." Mr. Biddle is allowed to go scot free by President Roosevelt, according to the latter's letter of approval to Attorney-General Moody, first because "no one has suggested bringing action against several Western railroads that granted rebates to the International Harvester Company," and "there is, of course, no possible excuse for discriminating one case from the other." In other words, one set of offenders is to be exempt from prosecution in the courts because neither the press, the public, nor the Attorney-General has as yet urged the prosecution of a lot of similar offenders! This is extraordinary doctrine.

The President's other points are that he has never prosecuted individuals, but always *corporations;* that Mr. Morton denies all knowledge of any wrong-doing, and that no evidence to the contrary has been produced, thus overlooking the Judson and Harmon statement that "the *formal proof* can be had *only* by judicial process." In other words, Mr. Roosevelt declares that corporations may be as wicked and as guilty as they please, but their officers are innocent parties, not to be prosecuted until the legal evidence against each individual is perfectly clear. Lest our readers think we exaggerate, we call attention to Mr. Roosevelt's own instructions to Mr. Moody to prosecute the accused pork packers individually only if the Chicago grand jury shows by indicting them that it has what it considers adequate proof. This attitude, it is scarcely necessary to say, will bring into contempt the whole Administration campaign against Trusts and lawless railroads. In proceeding against the lawbreaking corporations the Government is reduced to the single deterrent of a nominal fine. If personal prosecutions are to lie only when the Attorney-General can be sure of the *motive* of the responsible corporation officer; if this motive is to be presumed as good, failing legal evidence to the contrary, then Congress might as well strike every anti-Trust law from the statute-books and save future Presidents the burden of noisy agitation for an impossible reform.

So far as Mr. Morton is concerned, the President not only vouches for his moral blamelessness, but also proffers him inexpert advice as to how to conduct his new life-insurance business. The Holy Father himself could give no more complete absolution with greater unction or more obvious certainty of representing the highest power on earth or in heaven: "I do not think that you need pay any further heed to the accusations that have been made against you." Mr. Roosevelt then reasserts his own full confidence in the man who testified *under oath* in 1901, in another case before the Interstate Commerce Commission: "Yes, sir; it was an illegal contract. It was illegal when we made it, and we knew it." Similarly, Mr. Roosevelt pays no attention whatever to the outrageous case of the fake Hutchinson and Arkansas Railroad Company, owned by Paul Morton's brothers, Joy and Mark, with whom Paul Morton made a favorable traffic agreement as if it were a bona-fide railroad, although it possessed neither locomotive nor car. These cases were not, of course, under investigation by Messrs. Judson and Harmon. That they were not considered or touched upon by Mr. Roosevelt in putting the seal of his high approval upon Mr. Morton, shows that there was indeed a "misplaced switch" somewhere.

MR. HENDRICKS'S REPORT.

The supremely important part of Superintendent Hendricks's report on the Equitable Life scandal is his formal conclusion on the question of ownership and control. Summing up the situation as it has existed since the sale to Thomas F. Ryan of James H. Hyde's majority stock holding, and referring to the new owner's asserted purpose of reform, Mr. Hendricks says:

> "I do not question but this is the honest intention of those who have acquired the control of the stock of the Society. I do not think, however, that this will go far toward restoring the confidence of the present policyholders or aid in procuring new business for the Society. In my opinion the only thing that will restore that confidence and benefit the company will be the elimination of stock control, and, what I deem of equal importance, the elimination of Wall Street control. No superficial measures will correct the existing evils of this society. A cancer cannot be cured by treating the symptoms. Complete mutualization, with the elimination of the stock, to be paid for at a price only commensurate with its dividends, is, in my opinion, the only sure measure of relief."

We think that in this conclusion the Insurance Superintendent expresses the belief and demand of the entire body of Equitable policyholders, and of the larger public on whose patronage the Society must hereafter depend to reconstruct its fortunes. If, indeed, such feeling had not already obtained so firm a hold as it has done on the public mind, the formal assertion of the head of the State Insurance Bureau—an officer noted for his extremely cautious view of

insurance matters—that "*the only thing* which will restore that confidence . . . is the elimination of stock control," would suffice to create such a belief among the public.

Of Mr. Hendricks's report as a whole we shall say at once that it fulfils all reasonable expectations, and that it not only absolutely confirms the findings of the Frick committee, but uncovers an even more shameful record of official faithlessness and graft. We wish we could make our praise of the Superintendent's thoroughness unqualified, but the fact that these revelations, covering irregular practices indulged in as far back as 1876, are now for the first time brought to light, is itself a confession of past negligence. The Department has at no time been without warning in these matters. Some of these very abuses were investigated by a committee of the Equitable board itself, in 1877. Its recommendations were notoriously unheeded, and there was every conceivable reason, long before the outburst of incriminating charges last February, to believe that corruption in matters of this sort had extended far beyond the scope of a generation ago. If the Insurance Superintendent had taken the matter courageously in hand before the crisis of the present year arose; if he had done so last February, instead of devoting himself to "harmonizing" the two incriminated officers and suppressing the scandal, we doubt if the present equivocal status in regard to ownership would ever have arisen. The best atonement that Mr. Hendricks can make for his negligence in this regard is to inform himself, speedily and thoroughly, regarding the affairs of other life-insurance companies.

So far as the President and Vice-President of the Equitable are concerned, Mr. Hendricks's report agrees with the Frick committee's findings. As to Mr. Alexander, the Superintendent does indeed affirm that policyholders are under obligations to him for his demand, last February, for the Society's mutualization and for Mr. Hyde's retirement. But that Mr. Alexander had approved the company's questionable operations with its subsidiary concerns; that he acquiesced in a policy of extravagance and waste; that he continued and reinforced leases of Equitable property whereby the Society was a heavy loser and companies owned by Equitable directors correspondingly the gainers, and that he personally participated in syndicates organized for the illegal sale of securities to the Equitable, the report declares to be absolutely true.

Of Mr. Hyde, it is found that he permitted the Equitable to lose heavily in business transactions with companies largely owned by himself; that he "exacted salaries out of all proportion to his age, ability, or the value of his services"; that he "introduced and conducted the syndicate transactions and involved others with himself"; that he "has been accustomed to draw large sums for expenses on his own unitemized vouchers"; that, in short, "he has not seemed to consider himself accountable to any one for the expenditure of the Society's funds." Both of these gentlemen should be compelled, Mr. Hendricks declares, to pay back to the Equitable, with interest, the profits on their syndicate sales of securities to the companies, and he further states that it is an open question whether they, and the officers and directors who shared in these transactions, are not "disqualified, under Section 36 of the Insurance Law, from hereafter holding any office in a life-insurance company."

These conclusions regarding the two chief officers of the company make up but a small part of the Insurance Superintendent's incriminating findings. His review of the Equitable's relations with other corporations, during three decades, tells a story of official malfeasance and loot which amply justifies the reopening of those closed pages. Briefly, the practice of the Company's high officers appears during all this period to have been to organize outside companies in their own behalf—bringing in the Equitable at times as the least favored subscriber—and then so to conduct the Equitable's business dealings with such companies that the Equitable invariably lost and the other companies gathered in for their owners the resultant profit. That this official graft was deliberately introduced by the Society's founder, and was zealously extended by the men who held office after him, until the acceptance of their resignations, ten days ago, is the Insurance Department's unqualified conclusion.

There is more to say on these and some other phases of Mr. Hendricks's notable report, but the question to be met at once is, What steps shall be taken to guarantee the Society against recurrence of such evils? Ownership by a private individual provides and can provide no such guarantee; if his own purposes are above question, he is still at liberty to sell or bequeath his shares. Transfer of voting power to trustees does not provide it; trustees may resign or die, and the trust itself must eventually expire. The one lesson of these exposures, first by the Frick committee and now by the Insurance Department, is that the evils in the Equitable's past have originated directly from the stock-ownership principle, and that its future can never be secured from recurrence of similar abuses until that principle is abandoned.

THE SMITHSONIAN INSTITUTION.

The recent astounding defalcation at the Smithsonian Institution must raise the question whether the policy of Congress in dealing with that establishment ought not to be radically changed. We say astounding, because the amount of the peculations, as semi-officially reported, exceed the entire annual income of the Smithsonian fund. To make the matter more inexplicable, the case was not the familiar one of a trusted subordinate absconding with the funds of a moneyed institution, but of a minor official abstracting year after year an important fraction of moneys supposed to have been deposited in the Treasury of the United States, and needed in the transaction of current business, without any one knowing what he was doing. What makes the affair mortifying from a national point of view is that the funds embezzled were those of a trust committed to the United States by a foreigner three generations ago. In the absence of detail, we have no wish to prejudge the case, and it is all the less necessary to do so from the fa that, whatever may be the verdict, some of the blame must fall on Congress, which has charged the Institution with the duties of a department of the Government without providing it with the machinery necessary to departmental administration. The abuse, if such it be, is one of those which have grown up so gradually as to escape public notice. It needs only a rapid glance at the course of events to reach a conclusion which, we think, will commend itself to the judgment of every one who carefully examines the situation.

It is not necessary to do more than cite the well-known facts that the bequest for founding the Smithsonian Institution was made by James Smithson of England to the United States of America, and that Congress accepted the gift and provided a Board of Regents to administer it. The executive officers of this board have borne three great names in American science—Henry, Baird, and Langley. By the liberal terms on which the funds were deposited in the Treasury of the United States, an income was assured which, modest though it may now appear, was great as measured by the standard of the time, and which has been increased both by saving and by bequests. Such an income, economically and wisely expended by such executive officers as we have named, under the direction of a national board composed of men conversant with the transaction of public business, was all that seemed necessary to make the Institution an agency of the first class in the promotion and diffusion of knowledge among men.

The successive steps by which it became so much more than this that, today, the expenditures of the Smithsonian are a mere incident of the administration, have been so gradual and at the same time so natural, that one scarcely knows where criticism should commence except in a single point. In the

very beginning, before Professor Henry took charge, a building was planned and started out of all proportion to any present or prospective needs of the Institution as actually organized. Not only was the cost of this building a large fraction of the income during a number of years, but its mere maintenance was a permanent drain upon it. No doubt uses were found for it as they can always be found for a public building in Washington; and the collections made not only by the Institution itself, but by the Government, and the donations of interesting objects by foreign governments, gradually grew so as to fill the building. The expense attendant on the care of this collection was more than the income of the Institution could bear, and Congress came to its assistance by making additional appropriations to defray it. Thus arose the National Museum. In a smaller way the system of international exchanges was organized and ultimately supported by Congress. Then the Zoölogical Park was added. One by one, organizations of this sort grew up, until the Smithsonian became practically a Government department for the administration of almost everything having a scientific flavor which other departments did not especially want.

The question at what point in this course of events a different policy should have been adopted admits of an easy answer on principles accepted by Professor Henry and commending themselves to the judgment of thinking men. Whenever any such organization was so developed that its work could be successfully carried on by the Government, the latter should take sole charge of it and relieve the Smithsonian of its care. In one important case Henry succeeded in carrying out this policy by having the valuable library started by the Smithsonian transferred to the Library of Congress. But no other step in the direction of this policy was ever taken.

No criticism on any one connected with the management of the Institution is implied in pointing out the features which unfit it for the functions of a governmental department. First among these must be placed the absence of that legal responsibility to the national Executive which is one of the first requirements for such functions. Every other department has a head directly responsible to the President. The Executive of the Smithsonian is not responsible to the President—not even to Congress—but only to the Board of Regents. The latter is a national body appointed partly by joint resolution of Congress, partly by the President of the Senate, and partly by the Speaker of the House of Representatives. Legally, the Secretary of the Institution takes no part in the selection of the men of whom he is the appointee and executive officer, but there is good reason to believe that he is, in many cases, allowed to determine the choice. This is one of those customs which grow up without exciting public attention until some flagrant case like the present brings it to light. The practice of subordinates influencing the selection of a chief is one which public men are apt to look upon with too much charity. From a correct point of view, the Secretary of the Smithsonian Institution is the one person in the land who should have nothing to say on the subject of the men who, as agents of the Government, are to judge and supervise his proceedings. It is no reflection upon the eminent citizens who compose the Board to say that the practice must tend to throw upon the Secretary a part of the responsibility of the Board itself. But for this, we must suppose that the Board would have seen the necessity of some system of keeping accounts that would make impossible such an occurrence as that which suggests the present review.

Peculations like those which have so suddenly come to light must have been greatly facilitated by the connection of the expenditures of the Institution with those of the Government. Considered by itself, there is a certain well-defined income from the funds bequeathed by Smithson; and there are in addition receipts from the sale of publications, all of which pass through the hands of the Secretary. This officer is supposed to have calls for all its income, and, it must naturally be supposed, would keep himself constantly informed of the amounts available for expenditure. In pursuit of this policy, if there were, at any time, a discrepancy between the amount reported by the treasurer as on hand and that found in the accounts of the Secretary, it would be immediately brought to light. That such was not the result must be, in great part, due to the indefinite character of the division of expenses between the Government appropriations and the Smithsonian fund. At least, this is the most charitable explanation of the case that occurs to us.

But there is still another circumstance which must greatly facilitate mismanagement generally on the part of minor officers of the Institution in conducting its business. We allude to the absence of that publicity as to expenditure which should be a feature of every institution for the management of which the Government is responsible. Only the most vague and general statements of receipts and expenditures of the Smithsonian fund are found in the annual reports. It is not known to what extent even the Board of Regents may be acquainted with the details. Official knowledge they may be considered as having, but such knowledge is purely formal and does not suggest action. We think the claim sound that the expenditures of a public trust should not only be safeguarded in the same way that public expenditures are, but should be as public as any Government expenditure. There is no reason why the cost of a research by the Institution should be kept from the public, that would not equally apply to one conducted under Government auspices. It is difficult to suppose that, had a clear statement of details of expenditure been published from year to year, the large sum which it would have been necessary to charge to embezzlement would not have been brought out by some curious inquirer.

It seems to us that it is assuming nothing more than a sane appreciation of the situation on the part of both the Regents and their Secretary to say that any measure which Congress may take to relieve them from any responsibility for the administration of Government expenditures, in order that they may devote their whole attention to the management of the Smithsonian fund proper, should be welcomed by both. No more honorable and important function than this could be entrusted to men of such high repute. The scientific standing and real usefulness of the Institution would be enhanced by such a policy. Under the actual policy, it stands before the public too much in the light of an auxiliary to a department of the Government charged with the administration of the National Museum and other public establishments. It should be made an independent agency, and relieved from every source of expense except that attendant on carrying out the provision of the founder in the spirit of twentieth-century science.

THE MOROCCAN AFFAIR.

Premier Rouvier's latest note has set the German Foreign Office an awkward question. He asks, in a word, "What do you want?" That it should be difficult to answer so simple a query casts a certain light upon the vagueness of the German contention. The Kaiser has worked desperately to secure a European conference on Morocco. Count von Tattenbach has persuaded the Sultan to reject the French reform proposals, and to decline to move except in obedience to the unanimous voice of an international conference to be held at Fez. Such an idea M. Delcassé opposed *à outrance*, holding that the Western Mediterranean question concerned only France, England, and Spain. Now, M. Rouvier, flattering German punctilio by admitting in principle that the Moroccan question is an international one, says, virtually, that France will be delighted to enter into a conference, provided that Germany will first define satisfactorily the topics to come before the congress, and in particular will agree that France shall not be required to renounce any obligations she has already assumed in the premises.

To this most reasonable and conciliatory request for information, Prince Bülow cannot give the true answer. Even shirt-sleeves diplomacy will not permit him frankly to say, "Why, my dear M. Rouvier, we wished to confer simply about kicking you out." It will also be troublesome, without overtly attacking the tripartite agreement between France, Spain, and England, to invent specific grounds for reassembling that ineffectual Congress which adjourned in 1880 at Madrid. Recent dispatches from Berlin hint that M. Rouvier's polite request for specifications has demoralized the Wilhelmstrasse for the moment, and there has been talk of substituting for the international conference a general understanding that France and Germany shall parley whenever occasions of dispute or considerations of common interest arise. To such a proposal, which would virtually give silent assent to the Anglo-French agreement, M. Rouvier could have no possible objection. He thus might relieve a dangerous tension, and he runs merely the risk that Germany may inaugurate a policy of pin-pricks, which is only a customary hazard of the diplomat's trade. In any case it is evident that the Kaiser and the Sultan have too optimistically indulged a common hope that an unfettered conference might substitute another protector for Morocco than France. It is not to be expected that M. Rouvier could fall into so patent a trap, and the universal indifference of the Great Powers to the invitation, as well as M. Rouvier's clever demonstration that Germany has no constructive plan to propose, forecast the bankruptcy of the scheme, while revealing the Kaiser as merely an indefatigable fisher in troubled waters.

For the rest, recent advices explain the aggressiveness of Germany as due largely to the Parliamentary weakness of M. Delcassé at home and his consequent failure to follow up the publication of the Anglo-French Agreement, April 8, 1904, by appropriate action. Beyond a loan of 50,000,000 francs from the Banque de Paris et des Pays-Bas, and the dismissal of the Scotch favorite and military adviser of the Sherif, Kaid Harry Maclean, M. Delcassé's policy of peaceful penetration did not go. Finally, and in lieu of more concrete demands, he presented to the Sultan and Council a general scheme of police and military reform. To both the Sultan and the Makhzen this rather academic and comprehensive invitation to purify their rotten régime was extremely offensive. Naturally, the Moroccan powers that be welcomed the first influential friend, and took courage last month, from the Kaiser's assurances, to reject the French proposals *in toto*.

How did Théophile Delcassé, surely one of the ablest diplomats in Europe today, come to commit himself to this policy of empty self-assertiveness? In part, we believe, through a pardonable lack of prevision. He could not have foreseen the collapse of Russia, which gave the Kaiser a free hand, and he naturally, if imprudently, supposed that there was time enough to formulate the details of the policy of peaceful penetration. Yet he cannot be absolved from blame for procuring a diplomatic advantage which he was not in a position practically to utilize. Here again M. Delcassé was caught in a predicament he could hardly have avoided. His unpopularity with the Socialists was cumulative, and he could not be expected to realize its extent. Leaders like Jaurès and Pressensé increasingly resented his autocratic and secret conduct of the Foreign Office. It was, they held, un-Republican, and gradually their opposition extended to want of confidence. Under Rouvier M. Delcassé no longer enjoyed the free hand he had had under Combes; he became the subject of vexatious Parliamentary attacks; it is doubtful if he could have obtained any discretionary appropriation, or indeed could have executed any effective policy in Morocco, with constant badgering from the leaders of the Socialist Left. Thus the now evidently foolish demands upon the Sultan were in the nature of a counsel of despair, and were dictated simply by the necessity of doing something. And the final collapse of M. Delcassé's cause was, as Mr. Ion Perdicaris points out in the *International Quarterly*, due "not so much to any foreign opposition as to the unwillingness of the Radical-Socialistic majority . . . to vote supplies or accord a generous support . . . to M. Delcassé."

We have no desire to play the umpire between M. Delcassé and his French critics, but we feel that their chief accusation, that M. Delcassé did not seek Germany's assent to the Anglo-French Agreement, is ill-founded. To have approached Berlin would, we are convinced, merely have given an earlier opportunity of obstruction to Germany; and a wearing obstruction along diplomatic lines would have been quite as serious as the Kaiser's more melodramatic intervention at Fez. Certainly, M. Rouvier's egregiously friendly attitude toward Germany has not demonstrated anything more than its moral advantage over M. Delcassé's alleged Teutophobia. M. Jaurès and his associates also may well regret that in humiliating the "Czar of the Quai d'Orsay" they have put arms into the hands of the Kaiser. Whatever the immediate outcome of the present negotiations, time is likely to do justice to M. Delcassé's merit in substituting, for the intolerable plotting and counter-plotting that followed the Madrid conference in 1880, the clear-cut principle of French preponderancy in Morocco. Whether the Germans like it or not, time works for France. As the *Economist* recently said: "Her 'peaceful penetration' is for the most part absolutely out of the reach of the other Powers' action. Harvesters will come, in any case, from Morocco to Algeria yearly, and will go home with substantial wages in five-franc pieces, and with a growing belief in the advantages of civilization over barbarism. Hospitals and schools along the Algerian frontier and within the Moroccan border will strengthen French influence."

THE MUNICIPALIZATION OF MUSIC.

It is one of the paradoxes of our time that while Germany is undoubtedly the most musical of all countries, it is far from being the paradise of musicians. The great ambition of German opera singers (and they are the best paid of all musicians) is to secure an engagement at Covent Garden, London, or, better still, at our Metropolitan Opera House, where they can earn more in four months than at home in four years. The same good fortune awaits the German pianist or violinist if he succeeds in winning favor on this side of the ocean. German music teachers look enviously upon the receipts of their colleagues over here; and while it is true that some of those in Berlin, Dresden, Munich, or Vienna are able to charge $5 or more a lesson, this is due entirely to the American and English pupils who flock to their studios.

The earnings of the minor musicians in Germany are extremely meagre. Near the bottom of the scale stands the orchestral player, who is expected to be an expert and an artist, yet must deem himself lucky indeed if he makes $2 a day. When he hears that Mr. Conried spends nearly $4,000 a week on his orchestra alone, he wants to pack his trunk and cross the Atlantic at once; but the Mutual Musical Protective Union has taken measures to discourage such aspirations. In recent years matters seem to have approached a crisis. In the current number of the Berlin periodical, *Die Musik*, Paul Marsop has an article on "Die Sociale Lage der Orchestermusiker," which describes the deplorable condition of these players. He points out that two decades ago conductors like Hans Richter, Felix Mottl, and Hermann Levi earned little more than the concert-masters at the royal opera houses in Vienna, Berlin, and Dresden earn to-day. Now Mottl gets $9,000 a year for his work at the Opera in Munich alone. The honorarium of the leading singers has also gone up very much, owing, largely, to foreign competition; but the orchestral player gets little more than he used to.

He ought to have twice as much as he has now, Herr Marsop thinks; but where is it to come from? The opera houses in the most musical of all countries are not self-supporting institutions. In Berlin the Kaiser pays $160,000 out of his

own pocket to enable the Royal Opera to produce good music. Other opera houses have a proportional subvention. To double the pay of a hundred players would strain the situation, unless economy were practised in other directions. The leading singers, Herr Marsop thinks, get too much, but he realizes that if their emoluments were clipped they would be more than ever inclined to hurry to Yankeeland. He thinks that less money should be squandered on scenery, and advocates the abolition of the expensive and antiquated ballet, the money thus saved being divided between the orchestral players and the equally underpaid chorus singers.

For a radical remedy, however, Herr Marsop suggests the municipalization of orchestras. Several German cities—Cologne, Düsseldorf, Aachen, Freiburg, and Leipzig—have already taken this step, and it is expected that the Kaim orchestra of Munich, the Berlin Philharmonic, and the Konzertverein of Vienna will sooner or later pass under municipal control. Cologne, it is even stated, will soon be able to support two town orchestras, one for opera, the other for concerts. In these cases the musicians become communal employees, entitled to pensions. In Italy, too, there is a movement in this direction. Last winter the rulers of Rome gave up the municipal brass band and put in its place a town orchestra which gives free concerts and at other times can be hired by operatic managers. Since cities create and control parks and educational institutions, why, it is asked, should they not foster high-class musical entertainments, which wean people from vulgar music and the demoralizing places where it is played?

Whether the salvation of the orchestra is to be worked out in accordance with the plan adopted in Rome and the German cities named, remains to be seen. The experiment is, in any case, an interesting one, and if it succeeds there is no reason why it should not be repeated elsewhere. In our own country, to be sure, the conditions are different, and the necessity of municipalization is not apparent. In Germany and other European countries bequests to orchestras by wealthy persons are extremely few, whereas over here nearly every large city has had its donations for orchestral concerts, headed by the million dollars of Mr. Higginson. It is to be feared, too, that if our cities had municipal orchestras, politics would compete with art, and the conductorships would not go to the best men, but to the men with the biggest "pull." Imagine New York with a municipal Philharmonic under control of a man like our present Commissioner of Parks!

Germany's own experience with military bands holds out no encouragement for the municipalizing of music. Herr Marsop paints their conditions in dismal colors. He declares that the function of the military bands has been entirely perverted, so that their main business now seems to be to give public concerts in competition with orchestras; he denies that they educate the public taste—their programmes are usually made up of cheap and trashy music, or music unsuited to the instruments used; and reports that his own experiences in investigating this matter were "one long chain of annoyances and vexations." His explanation of this state of affairs is curious. If the German public, he declares, flocks to the band concerts more than it does to orchestral entertainments, the reason is to be found in the newspapers. The orchestral concerts are commented on by blasé professional critics who are apt to be unduly severe, whereas the band concerts are reported by enthusiastic young reporters in the city department, and always lauded to the skies. Marsop wants the regular critics to be sent, for a change, to the band concerts, to tell the truth about them. That would, no doubt, provide fun for the readers.

AN OUT-DOOR MASQUE IN NEW ENGLAND.

WINDSOR, VT., June 24, 1905.

The little community of Cornish, New Hampshire, just across the Connecticut River, has been *en fête* this week, and the celebration may have more than a neighborhood interest from its nature and from the national—even international—reputation of some of the people concerned in it. Twenty years ago this summer Augustus Saint-Gaudens bought in the town of Cornish an old brick house and the land surrounding it, and made his summer home there. The somewhat forbidding original structure has been added to and embellished, surrounded with colonnades and gardens, until its original builder would surely fail to recognize it, and here Mr. Saint-Gaudens has gradually come to spend more and more of the year, until it is now his only permanent residence. His presence attracted other artists, and everyone who came found the charm of the beautiful scenery and of the simple and ideal country life irresistible. Though they came as visitors they remained as colonists, and there has gradually grown up a community of painters, sculptors, poets, and musicians which is, perhaps, unique in this country. The varied talents of "the colony," as it is affectionately called by its members, have just been utilized in a celebration of the twentieth anniversary of Mr. Saint-Gaudens's coming to Cornish.

The weather has always to be reckoned with in this country and the performance, which was to have been held on the 20th, had to be postponed to the 22d. The rehearsals had been held under varying conditions of extreme heat and unseasonable cold, but Tuesday opened under a low, black sky with such a threat of pneumonia that an open-air performance in classic draperies was evidently out of the question, and there was a heavy downpour of rain all day Wednesday. Even on Thursday the sky was still overcast, but the rain was gone and the temperature was rising. Some of the guests had been forced, reluctantly, to return to their homes and their vocations, and others must leave on the morrow; one or two of the performers of minor parts had been called away; and it was determined to wait no longer. The lawns and groves of Aspet, Mr. Saint-Gaudens's estate, might perhaps have appeared to greater advantage under sunshine, but, as far as the spectacle itself is concerned, it is doubtful if the gray light of a cloudy afternoon was not more favorable to the color-effects aimed at than would have been that of a sunnier day.

The guests were assembled before a gray curtain hung between two tall pines bearing great gilded masks, and, at a little after six o'clock, this curtain parted, and Iris, messenger of the gods, stepped forth to deliver the Prologue. A tall and graceful girl, clothed in shimmering, many-hued gauzes, she was an exquisite vision, and spoke her lines charmingly if in a not very resonant voice. The Prologue itself, a tribute to the art of Saint-Gaudens, who sat with his wife and son and his son's wife in the front row of the audience, is a piece of true poetry which it is to be hoped its author, Mr. Percy Mackaye, may see fit to publish.

The Masque which followed was in a lighter vein, almost that of burlesque, and was written by Mr. Louis Evan Shipman, with some slight additions by members of the company. It was crammed with local allusions, many of whch were more for the benefit of the chief guest and of the actors themselves than of the other guests, who could hardly be expected to understand them all; but it was meant only for agreeable nonsense and as an excuse for the spectacle, which was as beautiful as some of our foremost painters and sculptors, aided by the experienced stage-management of Mr. John Blair, could make it. The incidental music, which added greatly to the effectiveness of the piece, was composed or arranged by Mr. Arthur Whiting, and performed under his direction.

The drawing of the curtain disclosed a natural glade or opening in the pine grove, converted by temporary architecture into much such a setting as that of Puvis de Chavannes's beautiful painting of the "Sacred Wood, Dear to the Arts and the Muses." At the back was an elevated altar beneath a little temple of Ionic columns, wreathed and garlanded; and other columns and a few benches of classic form completed the picture. Here were discovered Jupiter and Juno, attended by Mercury, who had descended to earth on a mysterious errand which Jupiter refuses to disclose until the council of the gods is assembled. After a pretty domestic quarrel, Mercury is sent to summon the other deities, and, in his absence, a New England farmer, capitally played, wanders onto the scene. The strangers having revealed themselves to him, he proceeds to entertain them by an account of the colony as seen through the eyes of the native.

Mercury returns, the farmer is dismissed under the impression that he has been dreaming, and the gods begin to arrive, and are graciously received by Jupiter, who exchanges a few lines of dialogue with each of the greater deities. As they entered through the trees, each of the principals accompanied by his satellites in carefully thought-out color schemes, the effect was indescribably beautiful. First came sombre Pluto and his court in black and gold and

purple; then Neptune and Amphitrite, with their attendant Nereids in sea-green and blue; Venus and her bodyguard were in varying shades of tender rose, Diana and her nymphs in white and silver and pale blue, the wood gods in green and dun and yellow. Nearly the last, came Apollo and the Muses, all in white and gold, and grouped themselves about the altar at the back. When the stage picture was completed, from this radiant group, *couleur de jour*, the hues were blended in delicate gradation to the deepest tones which occupied the immediate foreground. Altogether there were some seventy people on the stage, or rather on the carpet of pine needles, and noticeable above the general harmony were some remarkably successful individual costumes—Ceres, all in yellow, crowned with corn; Pan, gilded all over and exactly imitating the reproduction of a well-known archaic Greek statue which has long ornamented the grounds of Aspet; Mars, a gigantic figure in blood-red draperies and cleverly contrived armor. All are assembled, and Jupiter rises to address his fellow-gods when a great clatter is heard without, and Chiron the centaur, the one frankly comic figure of the piece, forces his way in, unbidden, at the head of a rout of children, his pupils. The construction of the monster was a triumph of mechanical skill on the part of the well-known illustrator who enacted the rôle, and the children, of which blessings Cornish possesses an unusual store, were delightful in their natural abandon.

When the confusion is quieted, Jupiter rises again to inform the assembly that the position of the gods is no longer as satisfactory as of old, and that he has decided to resign. A spirited rivalry immediately springs up between Pluto and Neptune for the succession, and all the gods take sides with one or the other. The tumult is quelled by Jupiter, who calls upon Minerva to decide the contest. From this point on, the piece becomes a pretext for the introduction of a bowl of gilded bronze, reproduced from an antique found in Italy, which was to be presented to Mr. and Mrs. Saint-Gaudens as a memorial of the occasion. Minerva, after discouraging both claimants, makes a solemn invocation before the altar, and Fame, "a daughter of the gods, divinely tall," rises through smoke and flame with the bowl raised aloft in her hands. The young lady who took this part is scarcely less remarkable for classic regularity of feature than for unusual stature; and, in her gleaming golden tunic, lighted up by the parti-colored altar fires, was superbly statuesque and a marvel of splendid color—a Venus of Melos warmed with life. There is is a pause—a charm of wreathed dance by Iris, who makes a fleeting reappearance—and the bowl is brought to the front by Minerva, who proclaims that it bears the name of him most worthy. The name is given, and wood and field ring with shouts of "Saint-Gaudens! Saint-Gaudens!"

The play is finished, but the prettiest part of the spectacle is to come. Minerva steps across the turf and presents the bowl to the hero of the day, who receives it with real surprise and emotion; Mercury comes to his side to announce the actors; a procession is formed, group by group, and passes in review, then encircles the audience; as it returns to the point of departure, a chariot is dragged forth by fauns and satyrs, the sculptor and his wife are mounted upon it, and, heralded by scampering children, surrounded by the grave forms of white-bearded elders, followed by Jupiter, Pluto, Neptune and the long train of lesser gods and goddesses, are drawn triumphantly across the lawn to the distant pergola, crowned with the vine and lit by many lanterns, where, at long tables, a supper for two hundred persons is set out. The procession, formal at first, breaks into confusion; Diana and her nymphs crowd forward in disordered ranks. Apollo, in his white and gold, is seen skipping the rope of flowers swung by the two younger of the rosy Graces. All this, on the vivid green of the grass, under a sunset sky, made a picture almost overwhelming in its beauty—a picture never to be forgotten by those who beheld it. As the twilight deepened, the gleaming robes of Fame shone as with fire, the colors grew ever richer and more mysterious, this or that unpremeditated group was formed to break again. Finally, a charming and unintended allegory, the tiny lady who enacted Cupid was seen racing across the field in the chariot, drawn by Mars, her willing bond-slave. *Amor omnia vincit.* A dance in the great studio concluded the evening, and, at about eleven o'clock, the tired actors and the delighted guests began, afoot or in carriages, to wander home across the fields or along the country lanes.

It was a neighborhood frolic—a combination of private theatricals, picnic, and fancy-dress ball—but it was much more than this, too. It was a spontaneous and genuine tribute to a great artist and a much-loved man from those best qualified to judge of his artistic and personal worth, and as such it has a public—perhaps even a historic—interest which justifies this account of it. And, whatever may have been, from the professional point of view, the shortcomings of the amateur actors, as a piece of organized beauty it was anything but amateurish. It could have taken place only in such a community as this, and such a community of workers can rarely spare the time and labor which were cheerfully given to do honor to a master and a friend. It was as evident that a true and kindly enthusiasm underlay all the fooling, as that real artistic competence had directed the grouping and made the costumes out of odds and ends and studio properties. We shall not soon look upon the like again.

Correspondence.

THE INVULNERABLE BATTLESHIP.

To the Editor of The Nation:

Sir: Mr. Park Benjamin can hardly be aware that the greatest living naval authority has, *since* the battle of the Sea of Japan, said again, in substance, that what we need is the battleship "heavily armored and heavily gunned." Now that it is moderately clear that, under modern artillery fire and the assaults of modern torpedoes, the battleship is about as invulnerable as an orange is in dog days, he proves again by his strictest logic (*i. e.*, his most positive assertion) that all we need is enough of these naval sarcophagi to make us altogether invincible and to enable us to live at peace forever after—not by reason of our peaceable disposition (which in some other ways of looking at things might suffice), but because of the awful fear which other people, with nothing but guns and torpedoes, would have of us. It is of course all perfectly irrelevant that what happened to the Russian battleships would happen (so, or about so) to the battleships on both sides if both were sufficiently "gunned," to adopt Mr. Roosevelt's businesslike expression. How we shall have impenetrable armor all over everything and irresistible guns that shall hit all over everywhere, and make these advantages exclusive, is the problem to which Mr. Roosevelt, if he would make his peace argument conclusive, should direct the attention of "young" Mr. Morton, or (shall I say?) Mr. Bonaparte, his successor.

Well, no "lesson" will deter those who want to butcher and be butchered from pursuing their desire. But it will be something if the peaceable laboring folk, who have really to find the money, can be relieved of the burden of providing every half-dozen of them with a five-million-dollar contrivance to do it in.

Ancient Mariner.

Madison, Wis., June 17, 1905.

AFRICAN AND INDIAN FOLKLORE.

To the Editor of The Nation:

Sir: In the course of your reviewer's notice of 'Fetichism in West Africa,' reference is made to the fact that Dr. Nassau finds in the tales told by Uncle Remus another survival of African life in America. "But this," says the reviewer, "is still doubtful, for the negroes borrowed much from the Indians on the Southern plantations." The poor negro! It seems that when he is not borrowing, he is stealing; and when he is doing neither, he is imitating.

So far as I know, this idea that the negroes borrowed much from the Indians made its first appearance in a letter written by the head of the Ethnological Bureau a quarter of a century ago. That letter was intended to be a mere suggestion, in response to an inquiry about another matter made by a writer who knew no more about comparative folk-lore than those who professed to know; by a writer to whom the term "scientific" meant a great deal more at that time than it does now. There is not a particle of evidence to be found that the negroes borrowed any of the Brother Rabbit tales from the Indians. Parallels and variants of the negro tales may be found among the Indians, but why is not this evidence that the negroes told them to the Indians? The late Professor Hartt of Cornell, who was interested in the folk-tales of the Amazon region, had a theory that the stories he collected had been borrowed by the negroes from the native Indians; but this theory had to be abandoned when it was discovered that the same tales were told by negroes whose importation from Africa was so recent as to preclude all possibility of contact with the natives.

A very intelligent gentleman—the late W. O. Tuggle of Georgia—had occasion to go into the Cherokee Nation on business, and while there he made a study of their folklore, in the course of which he made a collection of stories. Among those that were fit to print were some parallels or variants of the negro stories, but not a particle of

evidence did he find that the tales were not borrowed from the negroes. Those that were too obscene to be told in print, certainly belonged to the red men, for their like is not to be found among the tales the negroes tell. JOHN HENRY ROMULUS.

[Careful students of Indian and African folk-lore recognize the American Indian element in some of the negro tales and legends. Writing in the *Journal of American Folk-Lore* in 1888 (vol. i., p. 106), Mr. James Mooney said of certain Cherokee animal myths ("chiefly of an amusing character, in which the rabbit is the principal hero and the author of all the mischief"), that "they resemble the Uncle Remus stories, which I hope yet to prove are of Indian origin." The same distinguished ethnologist, to whom the Tuggle MS. was well known, and by whom it was used, discussed this question again in his monograph on "Myths of the Cherokee," in the Nineteenth Annual Report of the Bureau of Ethnology. Here we read (p. 233): "The negro, with his genius for imitation and his love for stories, especially of the comic variety, must undoubtedly have absorbed much from the Indian in this way [as a result of contact and intermixture], while, on the other hand, the Indian, with his pride of conservatism and his contempt for a subject race, would have taken but little from the negro, and that little could not easily have found its way back to the free tribes." Says Mr. Mooney, again (p. 233): "It is not commonly known that, in all the Southern colonies, Indian slaves were bought and sold and kept in servitude and worked in the fields side by side with negroes up to the time of the Revolution."—ED. NATION.]

THE FAMOUS NEW STATUE IN ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: Your London correspondent exactly describes an impression which first strikes one in a cursory glance at Mr. Thomas's now famous new statue, which the New Gallery catalogue entitles "Lycidas." Perhaps it was some such impression that induced the Committee of the Royal Academy to at first reject a work which they later asked the sculptor to present again after authorities like Sir William Richmond and Mr. Sargent had declared it to have the qualities of a Greek statue. This dictum has been echoed by all the daily press of the kingdom, from the *Times* down; and all the higher weekly publications, the *Saturday Review*, *Athenæum*, *Spectator*, etc., have given it the highest praise.

Mr. Thomas, now one of the most noticed men, is a direct descendant of the John Harvard who founded our own University, and he is named for his ancestor John Harvard Thomas. He has had a professional training in his art, at London and Paris, under the best masters of his time. Profoundly thoughtful and original, he has deeply studied the Greek masterpieces in European capitals. Their haunting enigma had attracted him as a boy when he first came in contact with a collection of casts from the antique in an art school in Bristol. It is a problem which confronts all serious thinkers about art. Why, in the presence of Greek art, does all other artistic production seem, at best, but something more or less cleverly constructed; something lifeless in itself made by the artist to simulate life, but not a living reality? Why, in the best Greek work, on the contrary, do we feel the existence of a living personality, as real and vital as our own?

The young modern sculptor is taught the facts of human anatomy, how the skeleton lies under the flesh, and how the flesh and muscle should be made to cover it.

"Dann hat er die Theile in seiner Hand,
Fehlt leider nur das geistige Band."

His work may be the acme of cleverness; but, alas! it lacks just the one quality which makes it seem in very truth a living, breathing organism. We feel that his clever statue is an inanimate piece of marble or bronze. We are not, for a moment, cheated into the belief that it is life itself. But, in the best Greek work, the old fable of the statue coming to life seems a possibility. It *may* begin to speak and move, if it chooses to do so. Michelangelo believed himself unable to construct new feet for the Farnese Hercules, "because only a God could make them as living as the rest of the statue." Have we not here the reason why "restored antiques" seem to be a collection of unhappy ladies and gentlemen who have lost their own legs and arms, and are making the best possible shift with stony artificial substitutes for their absent members? It emphasizes the hitherto impassable gulf which has sharply divided modern sculpture from the best Greek work.

Mr. Thomas has been, for many years, withdrawn from the influence of modern art methods, amid the classic surroundings of the Bay of Naples, at Pompeii and Capri, ardently studying from the antique and the unspoiled peasant nature about him. He has from his earliest boyhood sought to solve this problem, viz.: how the great difference between ancient and modern results in art occurs, and how we may return to Greek simplicity and reality. Year by year the writer has watched the practical outcome of his studies as they have issued from his studio. Eight years ago some low reliefs of peasant and animal life about him were intensely interesting to one who had carefully observed their originals. The art was absolutely true to the facts of nature, and at the same time highly poetic and suggestive. It would be unfair to the artist to undertake in a brief notice to give an idea of his theories of art. Sir William Richmond and other enthusiastic friends hope to induce Mr. Thomas himself to set them forth at length. It suffices now to say that he believes the Greeks did not arrive at their marvellous reproduction of life by the analytical study of interior anatomy. It is certain that this method has not as yet produced a new Phidias.

Mr. Thomas's "Lycidas" has been hailed in England as if it were the work of some such mighty master; but the sculptor himself, with his great reverence for Greek work, would be the first to smile at such a lofty assertion. In his silver statuette of a nude dancing youth exhibited at the Royal Academy four years ago, however, Mr. Thomas did prove to us that it was still possible to produce a work of art which has this long-lost quality of living personality. The sculptor has been at work ten hours a day for three years on the present life-size statue in black wax of "Lycidas," and has accomplished a work which does impress the beholder as an actual living human being. It is this most unusual quality which goes far to justify the universal chorus of praise which has greeted the appearance of his statue at the New Gallery this season.

There is nothing studied or artificial in this nude youth, with hands and arms suddenly upraised as in surprise and grief. It is true that the attitude at first impresses one as almost too lacking in the conventional graces, and we do feel a certain yielding weakness in the poise which we cannot at once satisfactorily account for. The sculptor himself, answering in his quiet way to some such suggestion, once remarked: "Yes? But is not that a natural attitude under the circumstances?" Perhaps the remarkable deeply moved expression of the fine Greek face should have made us more readily susceptible to the subtilty of the whole suggestion of the figure. Are we not so accustomed to the less-searching conventions in art that we at first fail to recognize the simpler actions of Nature herself, and their power and significance? However that may be, here is at last a statue which gives us life itself—not a histrionic pose nor an imitation of antique methods and manner. Here is a reality, not a simulacrum. This in itself is a triumph of which the artist may be justly proud, both as a proof of the correctness of his theories and as a justification of the general enthusiasm with which their results have been greeted.

WILLIAM P. ANDREWS.

CAPRI, June 12, 1905.

[We find this letter of interest to print; but John Harvard died childless. —ED. NATION.]

Notes.

James Pott & Co. will issue in the fall 'To-day on the Nile,' by H. W. Dunning; 'The Woman of To-morrow,' by Miss Helen M. Winslow; 'The Ruined Abbeys of Great Britain,' by Ralph A. Cram; and 'Thoughts of a Non-Thinker,' by Charles Battell Loomis.

Lord Acton's distinguished successor, Mr. J. B. Bury, has just ended his life of St. Patrick, which is to be published directly by the Macmillan Co. Hitherto this saint has received scant justice at the hands of the historian. Either he has been misrepresented in the interests of party, or else he has been reduced to a myth, or, worse still, a nobody. Now for the first time the sources of his biography have been submitted to a critical examination, and an attempt made to ascertain his true place in history, with the general conclusion that the Catholic view of his work is "nearer to historical fact than the views of some anti-papal divines." Mr. Bury has written for the general public as well as for the specialist, not interrupting the narrative with technical discussions, which are relegated to appendices. The same firm will be the American publishers of 'Black's Medical

Dictionary,' a popular compendium of handy size and fully illustrated.

'The Romance of Red Fox,' by Prof. Charles G. D. Roberts, is to be among the autumn publications of L. C. Page & Co., Boston.

A volume elegantly and privately printed for the New York chapter of the Colonial Order of the Acorn, and entitled 'Early New York: with Illustrative Sketches,' consists of six copperplate copies (sometimes altered in scale) made by Mr. Edwin Davis French from old and rare prints, and of as many chapters, by several hands, more or less closely descriptive of the engravings, or discursive concerning New York life in each successive period. The earliest view is of Fort New Amsterdam in 1651; the latest is Rollinson's, 1801. A remarkable divergence between the plates for 1671 and 1673 implies a prophetic imagination in the designer of the latter, so much have two years done for the bulkheading and embankment of the East River waterfront, and for the general solidification of the town. Much information of a bibliographical sort, and some historical, is conveyed in the letterpress, and the collection is to be prized.

Beside the foregoing has just appeared a portfolio of twenty prints, 'The Broadway of Yesterday,' with brief descriptions by Charles Hemstreet, and an ingenious parallel series of photographic views of to-day made from the same points of view (New York: Cadwallader Publishing Co.). The extreme dates for this series are 1765-1853. We are glad to learn that it is only a beginning.

Mr. Edward Strachan Morgan's version of the 'Chronicle of Matarazzo' (Dent-Dutton) is a really fine piece of work. Indeed, we have never seen a translation which has more completely caught the spirit of the original. As everybody knows, Matarazzo tells the story of Perugia under the rule of the Baglioni, that clan of full-limbed men and lovely women, whose delicate complexions and golden locks filled and dazzled him with such a sense of their more than human beauty that he almost forgot their crimes in his fervid, well-nigh amorous, worship of their splendor and their strength. Such is the chronicle which Mr. Morgan has ventured to do into English; and it is hardly too much to say that the English is as good as the Italian. No lover of Italy should fail to read it; and all who read it will be grateful.

'Katz Awa, Founder of Japan's Modern Navy,' by E. Warren Clark, who was formerly a teacher in Japan, is a pleasing sketch of a noble character, who made the link between the old Yedo bureaucracy and the modern Imperial Government (New York: B. F. Buck & Co.). It is a biographical picture of history as one feels it, rather than the production of a writer familiar with the currents of thought and philosophy that drove on Okubo and Ito, and that make Togos and Oyamas. For example, the author does not seem to know the real reason why Katz, though an adherent of the Shogun, was intellectually hand in glove with Saigo, the Mikado's general, and how it came to pass that, through their comity of opinions as well as their friendship as alumni of the Oyomei school of philosophy, Yedo in 1868 was saved from the torch of the avenging army. This was done even when the images of rebel gods were pulled out of the temples by the Imperialist soldiers and hacked to pieces with their swords. There is not a word about the Oyomei doctrines on which Katz, Kido, Echizen, and the makers of new Japan generally, including the Satsuma generals and admirals of to-day, fed their souls. Despite some glaring errors and overweight of the subjective element, the little book is highly illuminating. Katz (1826-1899) was one of the moderate and reasonable men in the stormy period of transition. He had no superior as a reconciler and constructor. He navigated the first steamer across the Pacific. He was ever opposed to swashbucklers, killers, and jingoes of every sort. Besides being leader in many acts of statesmanship and civil and industrial development, he was the real founder of the navy of modern Japan. The author has told his story at close range with charm and fascination.

Dr. J. A. B. Scherer, in his 'Young Japan' (J. B. Lippincott Co.), has a special eye to the line of educational development, showing how eager the Japanese have always been to absorb the best of whatever culture presented itself to them. In his view the Japanese stand at the threshold of a new national manhood. His reading has been among the books of writers who know the sources, but he has also conned well the living book of the human nature of Japan, for he dwelt several years as teacher in the country itself. His main divisions are: Early Culture, Adolescence, and Modern School Days. He is strongest in his comparison of the islanders with the continentals. "The fundamental distinction is that between æsthetics and ethics. . . . The keynote of the Japanese character is sentimentalism; that of the Chinese, conservatism." He thinks the genius of the Japanese strangely un-Oriental," and that "Japan is out of place in the Orient," her people being temperamentally at variance with their neighbors." After their long inner development comes their expansion, yet Dr. Scherer gives no hint of the fact, proved by Dr. Batchelor, that the Ainu language is of Aryan stock, nor of the large admixture of Ainu blood—the blood of a true white race. The book is a companion to the author's 'Japan To-day,' and, with index and copious illustration, is well worth perusal. It is perhaps the best general view of the long education of the Japanese, though but slightly touching upon the philosophy which has nourished the leaders of modern thought and action. The omission of such a chapter seems a defect even in a "popular" book, for thought moved the men of 1868 even before Occidental culture and machinery attracted them.

The *Vossische Zeitung* reports that, in the library of Friedrich von Raumer, which the Prussian Government has bought for the city library of Bromberg, a copy of Jöcher's 'Allegemeines Gelehrtenlexicon' has been found which, according to an inscription of the former owner, originally belonged to Lessing, all four volumes being filled with annotations by this philosopher. The city librarian of Bromberg has sent these volumes to Professor Muncker of the University of Munich, who declares that they are valuable, and will publish the annotations in his new edition of Lessing's works (now going through the press), as a part of volume xxii., which is to appear in 1906.

Petermann's Mitteilungen, number four, contains a description of the changes in the southwestern coast of Schleswig-Holstein, due largely to diking and the planting of samphire-grass. The extent to which the land has gained upon the sea during the last century is graphically shown by a series of colored maps. Dr. J. Hoffmann demonstrates from observations taken in German East Africa, on the coast and in the highlands of the interior, that the heat at and near the equator is not so great as is commonly supposed. The reported geographical curriculum of the German universities and high schools merits attention, as showing the intelligent way in which the Empire is developing its foreign interests. Among the subjects treated at the University of Berlin we note the history and antiquities of Mexico and the geography and recent history of Morocco.

The French Government, through its educational and commercial departments, assists financially the "Society for the International Exchange of Children for the Purpose of Acquiring Foreign Languages" (Société d'Échange International), which counts among its zealous supporters an exceptionally large number of prominent men. This society has just issued its first annual report, from which it appears that, during the past year, 44 French children, 39 German, 4 English, and 1 Austrian, between the ages of eleven and twenty-seven, were "exchanged." Of these 88 children, 17 were girls. The report states that experience proves the years from thirteen to seventeen to be the best for such practical acquisition of a foreign tongue, as children do not possess the necessary knowledge before that age. The majority remained only during the vacations. The Munich *Allgemeine Zeitung* warmly approves of this innovation, on the ground that it supplements school work in a most successful way, and contributes to a better understanding of neighboring peoples. No serious difficulties were encountered, as the Central Bureau was careful to "exchange" children between families of about the same social standing. Parents and children, as shown by letters printed in the report, were more than pleased with the venture. The director is M. J. Toni-Mathieu, 36 Boulevard de Magenta, Paris.

The recent rapid increase of the plague in India—the number of deaths in the first three months of 1905 having been more than double those in the whole year 1901—is naturally attracting much attention in that country and in Great Britain. One of the difficulties in contending with it is the fact that there are nearly 56,000,000 occupied houses in India, of which at least 50,000,000 are unsanitary. The one promising weapon against it, according to a writer in the London *Times* of May 30, if the experience in Bombay can be trusted, is inoculation. It is now proposed to increase the favor with which this is regarded by combining life insurance with the operation.

A bundle of documents issued by the Red Cross Society of Japan, rewritten and showing the work done up to the 20th of October, 1904, reveals this as one of the most active of the branches of the world-wide organization. The larger pamphlet, (pp. 159) beside a map of the empire showing stations, including Formosa, Riu Kiu,

and Pescadores, and plans of the two hospital ships, *Saviour* and *Mercy*, is well illustrated. It shows the methods of arousing public interest, and gives the details of relief in time of earthquake as well as of war, with rules, history, etc. Dr. Nagao Ariga, the famous authority on international law and legal adviser to Gen. Nogi, is the painstaking and eloquent scribe. The account of the organization of the relief detachments is very interesting. On October 1, 3,266 persons of thorough scientific and practical training, mostly retired army privates, had been sent out as men nurses and stretcher-bearers on the field, and as many more as were necessary stood in readiness. All at the front are men; on the hospital ships the sexes are equally represented; at home all the nurses are women. In the Ladies' Volunteer Nursing Association, many women of the highest classes are found. This is a great change from the situation a decade ago. As Buddhist nuns cared nothing for nursing, and "the rules of good society were stronger than humanity," as Dr. Ariga says, only women of lower rank would at first serve as paid nurses. The example of ladies of the nobility and gentry has changed all this, thousands of them being now in the service, or acting as moral guides and instructors of the paid nurses. The finances of the society are in excellent condition.

Following Japanese precedent, the French evidently intend to increase their influence in the Chinese world by the establishment of higher educational institutions. The Government of Indo-China has planned to establish a Chinese university in Hanoi, to be modelled after that of Japan. Already since January a higher Chinese school has been in operation in Tonkin, intended exclusively for the sons of Chinese mandarins. The course of study will be exactly the same as that of the Chinese schools of the Japanese.

Every scholar and friend of letters who has had occasion to visit the Central National Library at Florence, must regret to learn of the death, in the first week of June, of Comm. Desiderio Chilovi, for twenty years the director of that institution, and for a quarter of a century more a diligent librarian in Florence and in Rome. Signor Chilovi did what he could to procure an ampler receptacle for the treasures under his charge, and was keenly alive to modern improvements in library methods and management. In his relations with his own associates he was greatly esteemed for his humane spirit, and he was ever courteous to all who sought the privilege of consulting the Library.

—The July *Century* gives first place to a discussion of the Secession Movement in German Art, by Albert Kinross. After producing a Dürer, a Holbein, and an Altdorfer, Germany sank into a sleep of several generations, a lethargy from which she was to be shaken only by the efforts of Böcklin and Menzel, whose followers, such as Leibl, Liebermann, Von Uhde, and Klinger, have fought a fight to the death against the old decadent forces and have won. With this triumph, German artists "are allowed to paint as Providence intended they should paint, expressing themselves, their own eyesight, their own feelings, their own philosophy, as every artist must who would endure." Rev. J. S. Sewall, who accompanied Perry to Japan as captain's clerk on the *Saratoga*, contributes a very readable chapter of recollections of that famous expedition, the real or alleged results of which are springing up in so many directions. Dr. Sewall reports truly that Perry threatened to sink the cordon of guard boats thrown by the Japanese around his fleet if they were not withdrawn in fifteen minutes. So brief a time limit seems more in accord with modern shirtsleeve methods than with the pious prayer recorded in the Commodore's own narrative under the same date, "that our present attempt to bring a singular and isolated people into the family of civilized nations may succeed without resort to bloodshed." Manager Stone continues his narrative of the news-gathering methods of the Associated Press, freely admitting in some cases an "enterprise" but little short of that displayed by the independent service of the more sensational dailies, as when the laundry lists sent out of the Conclave with the soiled linen of a cardinal carried cipher messages to the outside world concerning the progress of the Papal election, after a dove, brought in under the belief that its semi-sacred character would protect it, but secretly trained as a homing pigeon, had had its unlucky neck wrung by order of the shrewd Rampolla.

—In the May number of the *University Review*, Prof. E. A. Sonnenschein of the University of Birmingham, England, writes an article on "Shakspere and Stoicism" to demonstrate the influence of Seneca, the philosopher, on the English dramatist. In the course of his argument he points out a parallel passage which has hitherto escaped the notice of parallel-hunters. The famous speech of *Portia* in the "Merchant of Venice," "The quality of mercy is not strained," has always been regarded, says Mr. Sonnenschein, as "one of the brightest jewels in the poet's crown. . . . Yet it is neither more nor less than a beautiful rendering of the leading ideas of the treatise 'On Mercy,' the *De Clementia* of Seneca, in which he addresses an eloquent appeal to the youthful emperor Nero to exercise his despotic powers in a spirit worthy of his position." We quote a few of Mr. Sonnenschein's parallels.

SENECA.	SHAKSPERE.
Nullum clementia ex omnibus magis quam regem aut principem decet (I. 3. 3).	It becomes The thronèd monarch better than his crown.
Eo scilicet formosius id esse magnificentiusque fatebimur quo in majore praestabitur potestate (I. 19. 1).	'Tis mightiest in the mightiest.
Quod si di placabiles et aequi delicta potentium non statim fulminibus persequuntur, quanto aequius est hominem hominibus praepositum miti animo exercere imperium? (I. 7. 2).	But mercy is above this sceptred sway; It is enthronèd in the hearts of kings; It is an attribute to God himself.
Cogitato . . .quanta solitudo et vastitas futura sit si nihil relinquetur nisi quod judex severus absolverit (I. 6. 1).	Consider this, That in the course of justice none of us Should see salvation.

"In this last passage," says Mr. Sonnenschein, "even the form of the sentence is similar; in the English, as in the Latin, we have an Imperative Mood with a dependent clause." He finds in five other plays of Shakspere ideas and phrases which suggest that their author had read the *De Clementia*, but none are as convincing as those quoted above.

—Now it must be observed that the first English version of Seneca's tract was published about twenty years after Shakspere wrote the "Merchant of Venice." There were, indeed, French and German translations. But, as Mr. Sonnenschein says, it is far more likely that Shakspere read Latin at school than that he read French or German translations of Latin. Mr. Sonnenschein therefore seems to have made a real contribution to the vexed question of Shakspere's scholarship, not to be lightly answered with Ben Jonson's epigram, "Small Latin and less Greek," in the face of such evidence as this. Few, probably, will agree with Mr. Alfred Austin, who objected to Mr. Sonnenschein's theory on the ground that "the white heat, the fine frenzy of the brain, in the moment of such composition, precludes so cold a procedure." In the first place, we do not believe that the Poet Laureate is an authority for moments of "white heat" in writing poetry; and some of the finest modern poetry has been built precisely after this fashion, as any scholar who has read Swinburne's "On the Cliffs" knows well. It is the peculiar delight of the classical student, a pleasure hardly dreamt of by the general reader or by the student of modern literature who knows no Greek, to linger over such reminiscent poetry as this, to pick up the threads of Sappho in Swinburne, or acknowledge each allusion to the great tragedies of the Greek drama in "Pauline." No other reader so keenly appreciates the art and the inspiration of the modern poet who has stiffened the texture of his work with those gold threads from the Greek poets. To such a reader Portia's speech will now have a new meaning and an added beauty.

—The illustrations of the latest number of the Newnes Art Library, devoted to Tintoretto (F. Warne & Co.), give a fair idea of the art of that turbulent genius whose love for violent action, with or without reason, led him sometimes to the verge of absurdity, and whose fecundity of imagination and rage for production rarely left him time for thoughtfulness of conception or completeness of rendering. The text is of no value, and repeats much of the nonsense that has been written about this artist, and perhaps there has been more nonsense written about him than about any other painter that ever lived, not excepting Turner. He excited Ruskin's imagination, and the result of this excitement was the most extraordinary series of descriptions of pictures ever written, in which not only are meanings attributed to Tintoretto that he cannot have thought of, but the material objects represented are entirely misunderstood. In spite of the pictures themselves, and even of Ruskin's partial retraction, these descriptions die hard. They are still repeated in guide-books, and studied, in front of the works themselves, by puzzled tourists; and one of the most fantastic of them turns up here, it being gravely stated that, in " 'The Baptism of Christ,' the clouds on which the heavenly spectators rest . . . form a fish, the well-known type of the Redeemer amongst the early Christians"; the fact be-

ing, as Ruskin afterward admitted, that there are in the picture no "heavenly spectators" resting on clouds of the form of a fish or of any other form—only ordinary human spectators sitting on the river bank. Ruskin saw a dozen other things in the picture which are equally absent from it, as an impartial inspection of the reproduction given in this volume will show. The sketchiness of the work and the badness of the light in the Scuola di San Rocco are the only excuses for his vagaries—there is no excuse for those who repeat them now. Yet everybody seems to go a little crazy on coming in contact with Tintoretto, and a sane judgment of his powers and failings is difficult to attain. In looking over the plates in the present publication, one is equally astonished at the evidences of an almost colossal ability, and at the lack of balance and even of seriousness. Much of the work is sensational, marked by an unbridled desire for effectiveness at any cost, while very, very little of it at all represents the best of which its author was capable. Tintoretto's finest things are as fine as any one's, but there is no fault, except timidity, of which he is not occasionally guilty, and his worst things are sheer bombast.

—Technically, feeblemindedness includes the idiotic and those mentally or morally imbecile. It excludes the insane, those with a normal equipment who have gone astray, the literally deranged. The idiotic, those who never had a mind, are hopeless, because mind may only be developed, not created. They require constant care, which can best be extended in a properly organized institution. The perpetual presence of an idiot in a private family is a sacrifice of all the finer sensibilities to an unwise service of affectionate duty. Imbeciles, those having some mental endowment, are for other reasons still more properly cared for under an organized service. It gives them vastly better opportunity for the development of the single talent than when it is buried in the napkin of an incompetent, although it may be a loving, household. And these imbeciles range from the fatuous, who can never be trusted, to the partly equipped, who may ultimately become self-supporting. A third class are the moral imbeciles, those in whom the moral sense exists barely, or not at all. They are not simply bad. They range from moral idiocy to moral imbecility, and the notorious Jesse Pomeroy may be taken as a type of the savage variety. They may be simply brutish, or they may be charming in appearance, attractive in manner, and satanic in their capacity for devising deeds that to other minds are only evil. Many of these are, in the various social grades of the unconfined world, selected by the expert with difficulty and by the inexpert only after repeated experience with their obliquities. All of these should be under trained instructors, and appropriate schools are gradually being established for such unfortunates. Dr. Martin W. Barr, now at the head of the Pennsylvania Training School for Feeble-Minded Children, established, although not founded, by Dr. Joseph Parrish of blessed memory, has prepared a considerable volume, 'Mental Defectives' (Blakiston), from his experience there. It is copiously illustrated and contains much description of useful training methods and a good deal of detail about many of the pupils. Dr. Barr believes that epilepsy represents progressive deterioration, and is incurable in the radical sense; which may incite criticism. He strenuously urges asexualization as soon as competent judges pronounce a child imbecile. Having occasion to mention Helen Keller, although she is in no respect a mental defective, Dr. Barr errs in saying that she was a pupil of the Perkins Institution for the Blind, and he quite fails to acknowledge the genius and the consecrated patience of Miss Sullivan, who, unaided, rescued her by the tactile sense alone from her living tomb.

SEPARATION OF CHURCH AND STATE IN FRANCE.

La Séparation de l'Eglise et de l'État en 1794: Introduction à l'histoire religieuse de la Révolution française. Par Edmé Champion. Paris: Armand Colin. Pp. xiii., 279.

This is a little book, but a really remarkable one, which no one interested in the French Revolution can read, or even reread, without great advantage. Only recently have the animosities engendered by the Revolution so far subsided as to permit an effort on the part of historians to come at its fundamental results and to estimate fairly the motives and methods of those who carried it through its several stages. Attention is no longer fixed primarily upon the disorders of the period, but rather upon the permanent achievements. Sorel, Aulard, Morse Stephens, and Champion not only have at their disposal material which was inaccessible when Mortimer-Ternaux, Wallon, Sybel, or Taine wrote; they have, what is still more important, an attitude of mind which enables them to see something more in the acts of the National Assembly and of the Convention than *la fureur des combats et le goût des ruines.* The legitimate rehabilitation begun by Carlyle in the case of Danton and Desmoulins has been carried on until at last we are able clearly to discern, amid much superficial and exaggerated turmoil, a great series of momentous reforms accomplished by legislators who were, on the whole, upright and self-sacrificing. They made some mistakes, it is true, for they had had no experience to fit them for their difficult duties, and worked at a tremendous disadvantage; but it seems certain that no body of men ever accomplished such a vast reform in so brief a space of time, and, judged by the permanence of the changes, with such marvellous success, as did the members of the National Assembly during the years 1789-1791.

Among the reforms, none were more important than those connected with the national Church; yet these have been especially obscured by the notion that the Revolution was an essentially irreligious movement—an idea fostered from the very first by that large class who are always ready to mistake an objection to an expropriated tithe for a repudiation of Christianity. Then, the survival, even down to the present moment, of the old questions concerning *congrégations,* religious instruction, ecclesiastical subsidies, and ultramontanism has served to perpetuate a partisan spirit, whether clerical or anti-clerical, which is incapable of reaching sound historical conclusions. Yet these very issues give an especial interest to M. Champion's admirable description of the ecclesiastical policy of the first French Assembly. His spirit, his knowledge, and his graceful style immediately evoke the reader's confidence and admiration. His closing paragraph may serve as the key to his little work: "Envisagée par les petits côtés, cette histoire n'offre qu'une suite de débats et de conflits souvent impatients, parfois pitoyables. Vue de haut, bien comprise, elle apparaît comme une glorieuse ascension vers la lumière et la liberté."

Previous to 1789, the clergy in France were regarded as constituting the first order in the State, a distinction which they hardly enjoyed in any other European country aside from the Papal Dominions. They performed the important civil functions of recording births, marriages, and deaths, upon which much naturally depended. They owned vast tracts of land and untold personal property. Their religion was a monopoly sanctioned and defended by the State. Heretics could not be legally married, nor could their births and deaths be subject to official record. As late as 1781, even Condorcet could not venture to urge toleration. "We do not ask," he says, "that the Protestants should have their own worship and ministers, we only ask that they may have children." The Government guarded the Church, its doctrines, and institutions from attack. A royal declaration, issued only a generation before the opening of the Revolution, imposed the death penalty upon any who should write, print, or distribute any attack upon religion. The monarch appointed all the chief officers in the Church: archbishops, bishops, and abbots. The sovereign courts opposed the extension of ultramontane control, and extolled the Gallican liberties of the clergy.

The novelty and extent of the irreligion of the eighteenth century have generally been grossly exaggerated, as well as its effect upon the course of ecclesiastical reform. This is especially emphasized by M. Champion, whose conclusions are in harmony with the growing conviction among scholars that the influence of the *philosophes* has been much overrated. They disliked fanaticism, disorder, and oppression, and clearly perceived the numerous ecclesiastical abuses, but they were rarely actively irreligious, and would scarcely have comprehended the virulence of modern anti-clericalism. The suppression of the Jesuits in 1763 should not be attributed to them, since it was but the logical outcome of the suspicions and accusations which go back to the first appearance of the order in France two centuries earlier. Nor was it the fault of the *philosophes* that the King appointed a commission of archbishops, who, in 1768, suppressed more than a thousand religious communities, and even some entire orders, which appeared to have quite outlived their purpose.

It was not until 1787 that, as M. Champion thinks, the first blow was given to the supremacy of the Church, and by so devout a ruler as Louis XVI. From time immemorial the law of the land had held that the marriages of non-Catholics were but concubinage and their children bastards. This was now changed, and the priests were ordered to register all births, marriages, and deaths, regardless of creed. This by no means implied religious toleration. The Protestants must still scrupu-

lously observe all Catholic festivals, and might not hold any public religious services. This new measure appears at first sight an obvious and simple act of humanity and justice, but it was by no means simple, and implicated the King in an attack upon the Catholic religion and upon the freedom of conscience of its ministers. For the Protestants might, by the terms of the edict, require the Catholic priests to register their marriages, and the parish priest to whom they applied was required, in drawing up the certificate, to declare that the parties were "united in a legitimate marriage." In short, he was compelled by the Government to declare valid a union which his Church repudiated as sinful and void since it was unsanctioned by the sacrament of matrimony. The Convention never hazarded a more tyrannical and sacrilegious innovation. In order to remedy to a slight extent an ancient abuse, the ministers of the God-fearing martyr King could think of nothing better than to introduce a new abuse almost as bad. It is probable that the public were scarcely startled by the situation, since it was but an illustration of the singular and hopeless confusion of religious and civil functions to which they had always been accustomed. It was the ungrateful task of the first National Assembly to begin the untangling of the French Church and the French Government which had so long and so completely interpenetrated one another.

The *cahiers* prepared in 1789 by the clergy, high and low, the noblesse, and the commoners in town and country give us the most complete and reliable expression that could be desired of the general attitude of the French people toward their national Church. While the clergy lament, as has been their wont from all time, that there are distressing indications of irreligion, there is no hint in any of the *cahiers* that any one dreamed of depriving the Church of any of its ancient dignity or exclusive privileges, or of questioning the duty of the State to foster it and protect it from all attacks. There was, in short, no religious question in 1789, only the question of well-known ecclesiastical abuses, especially the tithes, the niggardly stipends of the parish priests, the payments to Rome and the appointment of the prelates by the King.

When the Assembly met, the reform of these vices did not seem imminent, but the widespread disorder in the latter part of July, 1789, led to the abolition of the feudal dues on August 4-5, with the hope of quieting an impatient people. It was almost inevitable that the hated and oppressive tithe should be included with the innumerable feudal exactions which it somewhat resembled. Many of the *cahiers* of all classes had bitterly denounced this due, which is thus described by the clergy themselves, in one of their *cahiers:*

"Our deputy to the Estates General shall call attention to the fact that the tithes were originally designed to support the priests and meet the needs of the churches and the poor. Contrary to common justice and their proper purpose, the greater part of them are now held by chapters, communities, abbots, and other benefice holders who contribute only by a trifling stipend to the performance of the parish services."

The expenses for these services had to be defrayed by a second payment on the part of the people, although the tithe amounted to an eighth, sixth, or even a larger per cent. of the net revenue of the peasant. The clergy themselves surrendered the tithe, but with the expectation that it would be replaced by some other source of revenue from which the religious expenses of the parish might be paid. So the Assembly was led on from abolishing this universally unpopular due to considering the whole question of the property of the clergy, and an ecclesiastical committee of twenty was chosen to report on the matter. It was not, therefore, as commonly asserted, the embarrassment of the public treasury which led directly to the confiscation of the Church possessions.

Financial exigencies, however, hastened the reforms implied by the abolition of the tithes. To whom did the Church lands belong? Not to the clergy, surely, but to the Church. And what was the Church of France except the faithful of France, namely, the nation viewed from the standpoint of religion? This was the line of reasoning adopted to meet the arguments of those among the clergy who protested that their lands were not *biens nationaux* at the disposal of the nation, but were dedicated to God, and consequently sacred and inviolable. Had those who so violently maintained that the appropriation by the State of the lands of the clergy was the first act in an impious conspiracy due to the *philosophes*, but studied the *cahiers*, they would have discovered that zealous and even fanatical Catholics had given their deputies formal instructions to declare the possessions of the Church, especially those of the monasteries, at the disposition of the nation. The noblesse had been particularly insistent in this matter. Many of the *cahiers* of the nobles and of the Third Estate urged that the monastic orders should be absolutely suppressed, or at least greatly reduced in numbers, and their property applied to the public needs. In accordance with these instructions, the National Assembly declared illegal all irrevocable monastic vows, suppressed all communities where such vows were required, and forbade their reëstablishment. To one familiar with the terrible disrepute into which the monks had long before fallen, as even Montalembert freely concedes, there is nothing in the circumstances attending the abolition of the monasteries which suggests irreligion. Indeed, there is nothing in any of the measures hitherto mentioned which is not perfectly natural and explicable without assuming the slightest distrust among the Deputies in regard to the Catholic Church and its teachings. It is true that there were indications of a tolerance out of harmony with the traditions of the Church. A clause had been inserted (August 23, 1789) in the Declaration of the Rights of Man providing that "No one shall be disquieted on account of his opinions, including his religious views, provided their manifestation does not disturb the public order established by law." But the law could still prohibit, as it had done, the public services of an heretical sect. The Assembly went farther when (December 24, 1789) it revoked all laws excluding Protestants from office. Here was impiety indeed, from the standpoint of those who had strenuously opposed the omission by Louis XVI. of the clause in the coronation oath in which the King engaged to extirpate heresy. Yet there was no indication in this of an incipient revolt against the Church.

In order to realize the reforms demanded by the *cahiers*, and to carry out its previous resolutions, the Assembly sanctioned in July, 1790, the famous Civil Constitution of the Clergy. This is a remarkably clear and succinct document in four sections, each of which rectifies a long-standing abuse. (1) The bishoprics, which were regarded as too numerous and as varying too greatly in size and population, are reduced to eighty-three, and are to be conterminous with the newly constructed Departments. The parishes are to be readjusted later. (2) Bishops and parish priests are to be chosen only in one way, namely, by popular election. (3) The salaries of the bishops are equalized, and those of the parish priests greatly increased over what they had received from the tithe-holders, or *décimateurs*. (4) Strict rules are established requiring the churchmen to remain in residence and attend to their duties. Radical as all this has seemed to some, and conservative as it has seemed to other, critics, the Civil Constitution is almost fatally appropriate to the conditions in which it was drawn up. Its provisions were certainly not irreligious, or at least were not the result of irreligion. Even the Pope long hesitated before he condemned the document partially and in qualified terms. Posterity has passed a harsh sentence upon the Civil Constitution. Quinet and Michelet agree that the Assembly did not go far enough, and weakly compromised with an outworn system when they should have frankly and permanently severed Church and State. The absurdity of this contention must be clear from what has been said. It would, as M. Champion well says, have been as impossible at that time for the Assembly to effect a separation of Church and State as to light the Riding School, in which they met, with arc lights.

"They did not reject this separation, they did not think of it, and could not have thought of it. We shall see how the idea was suggested by succeeding events. To argue as if this idea had been familiar to the Revolutionary leaders is to distort, or rather suppress, the whole religious history of the period, for this history is nothing more than the record of events which gave birth to and gradually propagated the idea of separation."

The growing hostility toward the Assembly increased rapidly. The Civil Constitution of the Clergy was denounced as a wicked usurpation on the part of the Deputies. Those priests—and they were many—who accepted the new order were discredited as "*intrus*," incapable of performing the sacred duties which they had rashly assumed. The oath of fidelity which the Assembly required of the clergy was a not unnatural measure, designed to put an end to the agitations against the new appointees; and the Assembly had no reason to anticipate that so many would refuse to take a seemingly innocent pledge. Many of the clergy, high and low, did take it, but it served as an excuse, as is well known, for a new attack on the Assembly, and later gave rise to much persecution and bloodshed. The Civil Constitution was a failure, and yet Grégoire could truly say, when Napoleon's Concordat was accepted by the Pope: "All the motives for submission, all the proofs that you urge in favor, of the Concordat, are precisely those made use of to prove that the Civil Constitution should be accepted. You have set Europe on fire

and stirred up civil and foreign war, caused massacres and persecutions, in order to do ten years later what we did ten years earlier."

The counter-revolutionary party now began to brand as irreligious pretty much all that the Assembly had done. Mirabeau pointed out, what not uncommonly happens, that the extreme conservatives among the clergy were the strongest allies of such radical enemies of religion as then existed. "The only difference between the advocates of irreligion and the members of the ecclesiastical aristocracy is, that the former hope for the ruin of religion in order that liberty may the more surely triumph, while the latter promotes the destruction of the faith with the expectation of involving in its downfall both liberty and the Constitution." In May, 1791, the Assembly first granted liberty of worship. This measure was not, however, primarily due to an abstract love of religious freedom, but to the necessity of shielding those who preferred to attend the services of the recalcitrant priests. Thereafter, every one should not only be at liberty to think as he pleased, but to worship as he wished.

The first step toward a separation of the religious from the civil powers with which they had so long been confused, was taken May 10, 1791, when Bailly requested, in view of the conditions in Paris, that all declarations of births, marriages, and deaths "should be received by civil officers in a form compatible with every species of religious opinion." In spite of the weighty reasons urged for its speedy passage, so conservative and cautious were the representatives of the French people that the measure was not passed for many months (September 20, 1792). "The Revolution," Champion remarks, "more promptly and easily abolished feudalism, dispossessed the Church of its enormous wealth, declared war against Europe, and overthrew the throne, than passed a law in regard to the registration of births, marriages, and deaths."

On November 13, 1792, Cambon, as representative of the committee on finance, asked the fundamental question whether the priests should not be supported by the voluntary contributions of the faithful, and the Government subsidy be withdrawn. The Jacobins denounced the suggestion in unmeasured terms. They were convinced that the people at large were sincerely attached to their religion, and that the withdrawal of the Government subsidy would mean civil war. The counter-revolutionary party, however, rapidly completed the discredit, among the leaders of the Convention, of both priests and religion. With the exception of a few Deputies, like Grégoire, who remained Catholics, the revolutionists gradually accustomed themselves to regard religion as the chief obstacle in their way and as the chief resource of the counter-revolutionists. But while some of them would have destroyed by any means possible this potent weapon which was constantly turned against them, others refused to precipitate a persecution which would outrage their own principles and the sentiments of the mass of the nation.

After a very brief interference on the part of the Paris Commune with the Catholic worship, mass was again celebrated in many of the churches. Yet the attempted dechristianization, ineffectual as it was, served to spread the idea that the Government might perhaps withdraw the salaries which, according to the Civil Constitution, it engaged to pay to the priests and bishops. On September 18, 1794, Cambon's motion was passed by the Convention, and France ceased to support the Church. This decree had none of the traits commonly attributed to revolutionary measures—"nothing premature, startling, or brutal. It did not anticipate, but only followed, events themselves. It was in no way the result of long-preconceived ideas, nor dictated by fanaticism. It came when the Catholic reaction was well under way." To Joseph de Maistre, however, this final act of the Convention in regard to the Church was full and complete proof of the Satanic origin of the Revolution. The world had beheld monarchies crumble before, but never before had it heard "ce mot isolé dans l'histoire: La nation ne salarie aucun culte."

KROPOTKIN'S RUSSIAN LITERATURE.

Russian Literature. By P. Kropotkin. McClure, Phillips & Co. 1905.

We have here the work of a Russian exile, eminent in his early life as a man of science, and in his later years as an exponent of philosophic anarchism. Prince Kropotkin, though a man of artistic tastes, whose 'Memoirs of a Revolutionist' has shown his command of literary style even in English, to him a foreign language, has never been a professional student of literary history, or even primarily interested in literary criticism. The merits and defects of his book are such as we might expect from the temperament and training of the author.

A Russian, however, is comparatively little hampered by this lack of special preparation for writing literary history. In the first place, Russian literature is practically a creation of the nineteenth century; its real founder, Púshkin, was born in 1799. Russian writers before his time, though their names are numerous, and though Pýpin, in his great 'History of Russian Literature,' devotes more than sixteen hundred pages to their consideration, are of about as much contemporary importance as American writers before Bryant, or English writers before Chaucer. In the second place, the sociological point of view, which is just what most interests Prince Kropotkin, and from which he is best qualified to speak, is of peculiar and distressing importance in the history of modern Russian literature. In our author's own words:

"Literary criticism has in Russia certain special aspects. It is not limited to a criticism of works of art from the purely literary or æsthetic point of view. Whether a Rúdin [in Turgéneff's novel of that name], or a Katerína [in Ostróvski's drama, "The Storm"], are types of real, living beings, and whether the novel or the drama is well built, well developed, and well written—these are, of course, the first questions considered. But they are soon answered; and there are infinitely more important questions which are raised in the thoughtful mind by every work of really good art: the questions concerning the position of a Rúdin or a Katerína in society; the part, bad or good, which they play in it; the ideas which inspire them, and the value of these ideas; and then—the actions of the heroes, and the causes of these actions, both individual and social. In a good work of art the actions of the heroes are evidently what they would have been under similar conditions in reality; otherwise it would *not* be good art. They can be discussed as facts of life" (p. 286).

And again:

"Every class of the toiling masses which in other literatures would have appeared in novels as the background for events going on amidst educated people (as in Hardy's 'Woodlanders'), has had in the Russian novel its own painter. All great questions concerning popular life which are debated in political and social books and reviews, have been treated in the novel as well" (pp. 221-222).

A list of the chapter headings, with page numbers added, will give the best idea of the proportions of Prince Kropotkin's Russian Literature: I., Introduction (1-38); II., Púshkin, Lérmontoff (39-66); III., Gógol (67-87); IV., Turgéneff, Tolstóy (88-150); V., Gontcharóff, Dostoyévsky, Nekrásoff (151-190); VI., the Drama (191-220); VII., Folk-Novelists (221-262); VIII., Political Literature, Satire, Art-Criticism, Contemporary Novelists (263-318).

Some minor shortcomings of the book need be mentioned only in passing. Such is the startling assertion that the *bylíny* "correspond to the Icelandic *sagas*" (p. 8). The mistake, of course, is in regard to the sagas, not the *bylíny*, which the author correctly describes as ballads. In general, the half-dozen pages on Russian folklore are far from satisfying. Again, it can be only by inadvertence that Kropotkin gives no account of so important a writer as Gárshin, whom he himself mentions with admiration while speaking of Tolstoy (p. 124). We have looked in vain for a statement of the date of birth of Púshkin, Lérmontov, Turgéneff, Gontcharóff, or Dostoyévsky. A couple of paragraphs on the contrasting home environment of Turgéneff and Dostoyévsky would have been useful in explaining the nature of their literary work. Errors of the press are frequent. On page 108 a sentence is made unintelligible by some serious mistake of the printer.

As a Russian radical, Prince Kropotkin makes his book centre about two great movements in Russian society—that for the liberation of the serfs, which culminated in 1861, and the movement "towards the people" (p. 107) which occupied the minds of the younger generation, among whom our author was not the least prominent, in the seventies. Thus his allusions, and even his general point of view, are often far from clear to persons unfamiliar with Russian social history. We say this in no spirit of depreciation of the book, which, better than any other known to us, enables the English reader to understand the historic position of Russian literature and its value for the Russian people. But a separate chapter on social conditions in Russia, and on the chief schools of Russian thought, gathering up into itself all the illuminating remarks and suggestions which are scattered broadcast through the book, would have been of immense service.

An illustration will show the dangers of Russian sociological criticism of literature. 'Anna Karénina,' we are told, "produced in Russia a decidedly unfavorable impression, which brought to Tolstóy congratulations from the reactionary camp and a very cool reception from the advanced portion of society" (p. 126). Now an American will search 'Anna Karénina' in vain for any defence of autocracy or of Eastern orthodoxy. But it appears that "advanced" Russians, in their assaults on oppression of all sorts,

did not forget the tyranny of the marriage laws. Freedom of separation, in consequence of the replacement of an old affection by a stronger one of later growth, became one of their leading tenets. Hence Tolstoy (who, by the way, as a thoroughgoing individualist, had never joined the ranks of the "advanced" party or of any other) with his 'Anna Karénina,' which bears the menacing Biblical epigraph: "Vengeance is mine; I will repay," was denounced as a renegade. By a stern insistence on the moral law, quite comparable to Hawthorne's, Tolstoy had betrayed the cause of civil and religious freedom! Tolstoy is later restored to Kropotkin's good graces. By his interpretation of the Gospel teaching, he developed a doctrine of the simple life—simple to a degree unthought of by Wagner—that has much in common with the movement "towards the people" in which Kropotkin took part. Hence of Tolstoy's later works our author gives a sympathetic criticism that should bring them many new readers.

Making allowances for his peculiar bias, Kropotkin's analysis of Tolstoy's genius seems to us the most adequate of any we have read. Thus he makes clear (p. 115) the almost morbid love of self-analysis, combined with absolute sincerity, which lies at the bottom of the novelist's work from the very start. And in the following passage he lays his finger on the greatest artistic excellence of Tolstoy's writings, the capacity for all-embracing, impartial, objective observation, which runs parallel with an immense moral earnestness, but is never colored, except in some of his latest works, by the author's social and philosophic theories:

"Tolstóy's artistic power carries him beyond and above his theories. . . . His appreciation of this or that action, of this or that of his heroes, may be wrong; his own 'philosophy' may be open to objection; but the force of his descriptive talent and his literary honesty are always so great that he will often make the feelings and actions of his heroes speak against their creator, and prove something very different from what he intended to prove. This is probably why Turgéneff, and apparently other literary friends, too, told him: 'Don't put your "philosophy into your art." Trust to your artistic feeling, and you will create great things.' In fact, notwithstanding Tolstóy's distrust of science, I must say that I always feel, in reading his works, that he is possessed of the most *scientific* insight I know of among artists. He may be wrong in his conclusions, but never is he wrong in his statement of data. True science and true art are not hostile to each other, but always work in harmony" (p. 117).

Of Turgéneff, also, Kropotkin gives an excellent æsthetic appreciation. And while, like other critics, he lays stress on the simple beauty of this writer's style and the perfection of his narrative art, he makes especially clear the value of his novels, as representing successive periods of thought and successive types of character in Russian society. Thus our critic should be of real service to American readers who, judging Turgéneff's world by their own Anglo-Saxon ethics, become disgusted with his weak and flabby heroes.

For the reactionist and religious zealot, Dostoyévski, Kropotkin has a hearty dislike, and hence, it seems to us, decidedly underrates his literary genius. It is true that in his masterpiece, 'Crime and Punishment,' Dostoyévski attacks materialistic philosophy absurdly enough, making it lead his poor, demented hero to a crime that he must afterwards expiate by the severest mental torture, which ends only with a return to the trusting faith of his childhood. But the social propaganda of this novel is really a matter of minor importance, which would, indeed, be overlooked by most English readers; Raskólnikoff commits murder rather because of his own morbid temperament than in consequence of philosophic heresies. The narrative of his later agony is told with a power unsurpassed in fiction. Kropotkin, with his healthy common sense, performs a service by emphasizing the faults of Dostoyévski's work, and showing the absurdity of calling him the most representative of Russian authors, but he goes much too far in placing him below the commonplace and bourgeois Gontcharóff.

Sympathy for the toiling masses, and admiration for the men who give utterance to their hopes and their sorrows, lead Prince Kropotkin to devote much space to the "folk-novelists," Ryeshétnikoff, Levítoff, Uspénski, and others — writers who are scarcely known to the Western public even by name, and for whom even our author can claim no high rank as literary artists. They did their work in quickening the sympathies of educated Russians for their less fortunate fellow-countrymen, in preparing for the time when Russia shall be truly a nation. So even Gorky seems to attract Kropotkin less by his literary talent than by his passionate humanitarian aspirations.

Finally, we must note the buoyant, hopeful spirit which pervades this book, and which contrasts so strongly with the bitter, pessimistic tone of the novelists who have made Russian life familiar to Western readers.

James Watt. By Andrew Carnegie. Doubleday, Page & Co. 1905. 8vo, pp. 241.

Its lively, not to say jerky, style would hardly be a sufficient inducement to read this book. It contains, beyond a scrap or two, no new information about Watt. A particular interest, however, must attach to Mr. Carnegie's commentary on Watt's life, as one sees as soon as one recalls what that life was. Not the testimony of eulogists, but systematic critical comparison, warrants us in placing Watt among the world's great intellects, narrow though the field was to which he confined himself. Even when he was a child, his genius produced its impression, and was recognized by a few perspicacious men for what it was. At the grammar school he was backward in his recitations. He was not good at answering such questions as boys are expected to answer. Yet he must have been making good use of his time, since the early records of his thinking astonish us by bearing the marks of a trained mind—his stores of knowledge seem so well ordered, he strikes the nail so squarely on the head with unfaltering promptness, he is so sure to carry his most attentive scrutiny to the points where logical leakiness was most to be apprehended. The specifications of his patent, drawn up by this almost unschooled young man at an early stage of the invention, continued during near a generation to furnish lawyers with new surprises at their completeness.

When, at twenty years of age, he went to set up his little shop in Glasgow, explicit testimony and unmistakable actions show us that the extraordinary minds then clustered in the University began from their first interviews with the young instrument-maker to entertain a very thorough respect for his acquirements and intellect. John Robison, the well-known astronomer and physicist (afterwards called to a professorship in Russia), happening, when himself not quite twenty (Watt being then twenty-two), to drop into the shop, confesses, "I had the vanity to think myself a pretty good proficient in my favorite study, and was rather mortified at finding Mr. Watt so much my superior."

When, at the age of twenty-three, he took up his great problem, the judiciously contrived pumping-engine of Newcomen (which Mr. Carnegie does not understand, and misdescribes; but then Newcomen was born in the south of England) was beginning to be inadequate for the deepening mines of Cornwall, although its general principle is that of a modern pumping-engine, and though it had unquestionably been better adapted to pumping out coal mines than any more complicated contrivance, especially if requiring a considerable pressure of steam, would have been. It had a boiler and a separate piston-cylinder. Steam, being admitted to the vertical cylinder below the piston, raised this, and was first cut off and then chilled in the cylinder; whereupon atmospheric pressure, aided by the weight of the piston, restored the latter to its first position. The power was transmitted to the pump by means of a beam oscillating about its centre. Watt began by making an experimental study, sufficiently thorough and accurate for all the practical purposes of his generation, of the thermal phenomena of the boiling of water. He discovered for himself the heat of vaporization, though he at once found that Black, who was professor in Glasgow, but who printed hardly anything, had taught the whole doctrine of "latent heat" for two years. He also discovered that the same amount of heat was required to convert water from a fixed temperature into steam, no matter under what pressure it was boiled, as nearly as he was able to measure this heat. Being thus sufficiently equipped with theoretical data, he proceeded to the work of invention; and within a few months after his rediscovery of the heat of vaporization he had hit upon the idea of his essential improvement of the steam-engine, that of the condenser. That is, instead of chilling the steam in the cylinder, which chilled the metal of the cylinder and thus the new steam sent into it, he opened a passage into an exhausted cold chamber where a jet of water cooled the steam. He did not stop here, however, but perfected the engine in its principal features and in its minutest accessories considerably beyond what could advantageously be put into practice in his day.

Although these inventions were not all made before he began actual work, they were mostly made within four years. For thirty-five years Watt's life was a struggle to get the engines made and running. There was no machinery to make them with, nor any good tools. There were no even barely tolerable journeymen machinists. There were no men fit to be trusted to run the engines; and the best there were were liable

at any time to smash things in their drunkenness. For twenty-five of these years, Watt was the second partner in what was for those times a vast concern—the greatest mechanical establishment in the world. He was not naturally a man of business. He detested it. Financial affairs terrified him; and he always dwelt too much on adverse contingencies. He had the Celtic passion, pride, imagination, glow, social sympathies; and it needed another Celt to interpret him to us. The publishers well understood what was wanted in asking Mr. Carnegie to undertake this biography. It is very satisfactory to find that his judgment of the conduct of the firm is distinctly commendatory. Many sagacious observations of general application to the direction of large works are scattered through the volume, which its author evidently endeavors to render practically useful; so that it becomes not only a study of Watt, but an elucidation of Carnegie. In this connection, one will remark how full and clear an idea of the entire contents of the book he carries away from the reading of it. We note that here is one business man more added to the list of admirers of Samuel Smiles.

Happily, no literary person has been permitted to tamper with the text, as several passages convincingly prove. The preface names two highly competent engineers as having revised the technical passages, but here and there a sentence may be found to which they can hardly have lent their deliberate approval. Thus, on page 74, we read that the Newcomen engine "was an atmospheric engine, and in no sense a steam engine." In no sense? On page 49, and in a paragraph devoted to explaining what is meant by the phrase "latent heat," we read: "Heat . . . lies also in water. . . . The heat lies latent and dead until we raise the temperature of the water to 212 degrees, and it is turned into vapor. Then the powerful force is instantly imbued with life." But, in fact, the living force is not derived from the water, but from the coal; and more heat is "latent" in the steam than in the water.

Mr. Carnegie is quite mistaken, too, in attributing the first discovery of the composition of water to Watt. It having been already known that water was produced when hydrogen was burnt, Cavendish in 1781 ascertained that pure water was the sole product, and that it equalled in weight the sum of the oxygen and hydrogen consumed. He told Priestley of this, who, with a rather amusing notion of his own competence as compared with that of Cavendish, undertook to repeat the experiment with greater precision. In 1783 Priestley communicated the result to Watt, but stating it in terms of the phlogiston theory to which he was wedded. All that Watt did was to set Priestley's logic right by stating the matter as everybody now states it, and as Cavendish had originally conceived it. Mr. Carnegie can find the whole story, as all critics now concede that it should be told, in Thorpe's 'Essays in Historical Chemistry' (Macmillan, 1902).

On page 15 it is said that, "at fifteen, Watt had read twice carefully 'The Elements of Philosophy' (Gravesend)." This was not, however, Gravesande's great 'Introductio ad Philosophiam,' of 1736, which may be said to have given birth to the Scotch philosophy of common sense, but was only (doubtless in translation) his 'Physices Elementa Mathematica, Experimentis Confirmata, sive Introductio ad Philosophiam Newtonianam,' of 1720.

The reader would have been placed in a better situation to appreciate Watt's intellect if his lesser inventions could have been more fully explained, such as the indicator diagram, and especially that approximate parallel motion which he himself considered his *chef-d'œuvre* of ingenuity, for which see Kempe's 'How to Draw a Straight Line' (Macmillan, 1877).

Although Watt's statement that the total heat of saturated steam is the same at all pressures is so far from being true that no less than three-tenths of the sensible heat of the water must be subtracted from the total heat in order to get a substantially constant remainder, yet it does not follow that Watt's observations were in error. He could not do otherwise than assume that the heat imparted to the water, up to its boiling point, was measured by its temperature, which he naturally would ascertain by a mercurial thermometer, doubtless reading it only to the nearest Fahrenheit degree. If, then, he determined the heat of vaporization by passing the steam into water not very much cooler, it might very well happen that, although every figure he recorded was correct, these figures should have indicated an exact constancy of the total heat at all pressures.

Our readers will be interested in knowing that Watt not only read French and Italian, but, at a time when any knowledge of German was rare, took pleasure in discussing German poetry, and that he seems also to have had some acquaintance with Kant.

American Bibliography. By Charles Evans. Vols. 1, 2. Privately Printed for the Author. Chicago. 1903-1904.

For some twenty years, Mr. Charles Evans of Chicago, at one time librarian of the Chicago Historical Society, has been engaged in an undertaking of great magnitude, namely, to make a record of "all books, pamphlets, and periodical publications printed in the United States from the genesis of printing in 1639 down to and including the year 1820." The manuscript is now completed, and the first two volumes have been issued. The first volume, covering the years 1639 to 1729 inclusive, was published in 1903. It contained 3,244 titles, 968 of which fall in the seventeenth century. The second volume, with the imprint of 1904, has just been issued; it carries the record down through the year 1750, and the titles to number 6,623. The third volume is promised for the fall of this year, and the remaining five or six at yearly intervals.

The work is in many ways unique. Its typographical appearance is striking, the body of the titles being printed in capitals and small capitals, with lower-case letters for imprints and notes only. But the most important feature of this bibliography is the chronological arrangement of the titles. By choosing a chronological rather than an alphabetical or systematic arrangement, Mr. Evans has performed a real service, directly to students of American literature and civilization, and indirectly by the example he has set for future compilers of national bibliographies. Each volume has an alphabetical index of authors (and of titles of anonymous books), a classed index of subjects, and a list of printers (the last-mentioned, however, with no clew to the books printed by them). The titles have been copied "with scrupulous care from the works themselves, or from comparison of existing authorities." Unfortunately, Mr. Evans does not tell what authorities he has used, nor does he indicate the titles which have not been copied from the books themselves. A bibliography like the present work, which is intended to be final, should, in all cases where the record has not been made from personal inspection, state the fact, and also give explicit reference to the source or sources of information. The neglect of this *first principle* in bibliography, and the absence of all critical apparatus, must be regarded as a serious defect.

"The use of line-titles," Mr. Evans remarks, "so dear to the heart of the young bibliographer, has been purposely avoided from what is believed to be a well-considered belief that they should have no place in modern bibliography. Their use belongs, and rightly, to the incunabula of printing, or to books without title-pages, and to these two classes their use should be restricted."

We are inclined to differ. The object of line-titles is to indicate, as far as possible, the typographical appearance of the title-pages, particularly in the case of older books with longwinded titles like most of those catalogued in the present volumes; they are also of value where punctuation has not been used, in obviating the necessity of adding it. The liability "to create editions which do not exist" is not greater if line-titles are used than otherwise, while in certain cases their employment will enable the student to discriminate between issues which cannot be distinguished in any other way. However, while this matter is not quite as unimportant as Mr. Evans would have us believe, we are willing to admit that it is a minor detail.

Mr. Evans's 'American Bibliography' is certainly one of the most important contributions to bibliographical literature of recent date, and, when completed, will rank among the most useful tools of librarians, bibliographers, and students of literature.

The Fair Land Tyrol. By W. D. McCrackan. Boston: L. C. Page & Co. 1905.

Untrodden Peaks and Unfrequented Valleys: A Midsummer Ramble in the Dolomites. By Amelia B. Edwards. Third edition. London: George Routledge & Sons; New York: Dutton.

Books in English upon the Tyrol are still so few that any addition to the number is in itself welcome. Considering the billow of Americans which dashes against the Alps of Switzerland and flows down the passes into Italy, it is amazing how few penetrate the Tyrol, and how much fewer are those who really come to know it. Yet railway carriages from Paris to Vienna without a change thread the whole length of the land from Bregenz to Zell; and the Brenner Road carries thousands of tourists through the beautiful little city of Innsbruck, without stopping. For noble, high Alpine scenery, for magnificent mountain roads, for superb cliff and chasm, for sweeping forests, and for beautiful upland valleys, the Tyrol equals, and in some respects surpasses, most parts of Switzerland.

Moreover, Switzerland is, after all, a pleasure city, the haunt of the unemployed, while the Tyrol is a country which exists for itself; and its hale and friendly people (many of whom are also good innkeepers) can still live, even though the Englishman does not come.

Mr. McCrackan has chosen to write a book different in scope and treatment from any other in English; while it resembles his previous books on 'Romance and Teutonic Switzerland,' he has struck out rather a different tone in his combination of the personal element with the topographical. Readable for itself, and giving an excellent notion of the country, the book is also usable side by side with a guide-book, as an intelligent and interesting description of the principal places in the country. For example, the four chapters on Innsbruck might well be in the hands of any traveller who really wished to enjoy the remarkable sights of that place; and the same may be said of the four chapters on Meran and its surroundings. The author has a special eye for castles, although it may be questioned whether "it may be generally assumed that every castle in Europe was once a Roman castellum"; and his account of Castle Karneid and Castle Runkelstein will add to the visitor's pleasure. The remote valleys do not so much excite his interest, although the chapter on "Life on the Alm" has in it the breeziness of the high mountain pastures. One of the most interesting chapters in the book is that on "Dante in the Trentino," and no reader of Dante who has ever passed through the desert and savage gorge of the Val Sarca can fail to favor the hypothesis that this is the region which suggested the horrid rocks of the Inferno. Few English writers on the Tyrol have brought out so distinctly the charm of the historic characters as Mr. McCrackan has done in the chapters on Philippena Welser, on Andreas Hofer, on Stainer, the maker of violins, on Walther von der Vogelweide, and on Fallmerayer, the fragmentist.

To Mr. McCrackan, however, the Tyrol is a land of cities and valleys and passes. Outside of the interesting account of the Ortler, by far the most picturesque mountain in the Tyrol, there is almost nothing to suggest that the country is grouped against a spine of magnificent snow mountains, extending from Switzerland eastward to Carinthia. Since the author has furnished no map except the barest outline on the fly leaves, the reader would hardly realize from the book that the Tyrol houses beetling cliffs, slippery ice slopes, and profound gorges, equal in effect and almost in height to the giants of Switzerland. He passes all around the superb Oetzthal group, west, north, east, and south, with hardly a mention of it, with its sharp-cut valley-troughs and its mighty glaciers. Gross Glockner and Gross Venediger are also to him a sealed book; it is true that these regions are visited almost exclusively by German tourists and often by too many of them, that the country is sprinkled with refuges and so-called "huts," and that most American climbers make the acquaintance of Monte Rosa before they so much as hear of the Ortler or Gross Glockner; but there is no complete Tyrol that does not include the great snow mountains.

In the five chapters on the Dolomites, which conclude the book, more attention is paid to the high mountains, and, indeed, that country is inseparable from its peaks. To the right-minded Dolomitist, whose memory goes back to the days of the glory of the Aquila Nera at Cortina, no treatment is ever adequate: no book is long enough, or full enough; no pictures are clear and sharp enough; and nobody explores enough, or has a sufficient command of adjectives, to describe what he sees. Upon the Dolomites, Mr. McCrackan's book is pleasant and helpful, and may well lead up to Robertson's more elaborate and detailed treatment; but now, as twenty-five years ago, the indispensable work is Miss Edward's 'Untrodden Peaks,' of which a third edition is before the public. It appears to be from the same plates as the second, and is simply a concession to the need of a copy of Miss Edwards felt by all that fortunate part of mankind which knows the Dolomites. Nobody since she first wrote has ever caught that aroma of the new-mown hay, that stirring breeze down the valley, that soughing of the pine branches, that brawling of the river Pieve, which makes the 'Untrodden Peaks' a classic. Few, even of the most enthusiastic Dolomitists, penetrate as she did to Forno di Zoldo; and far too few occupy the vast caverns of rooms in the Hotel Miniere at Agordo. Of course, the Italian side of the mountains is out of the boundaries of McCrackan's book, and escapes him altogether, but he does know, and Miss Edwards does not, the entrancing gorge of the Cismone, leading up to Primiero. If there be a valley more beautiful than another in the Dolomites, it is this—the road crossing the narrow gorge on timber bridges, skirting the mountain, far above the river channel, where the log drive is jammed in the falls; and beyond the town, the finest of all Dolomite road passes, the Rolle, overhung by Cimon della Pala, and winding down through the thick forest to Paneveggio.

In one respect, however, Miss Edwards's book must yield the palm to its younger rival: the old woodcuts are retained, and, though the blocks are still in good order, it is impossible for the line to reproduce the effect of the mountains. Woodcuts, however interesting and suggestive, are inferior in definiteness and in effect of distance and of mass to the excellent reproductions of photographs which well set forth 'The Fair Land Tyrol,' and some of which appear to have been taken from the writer's own camera. What is there on the face of the earth more fascinatingly beautiful than the Monte Cristallo and its reflected doublet in the waters of the Dürrensee?

Gubbio, Past and Present. By Laura McCracken. Illustrated by Katherine McCracken. London: David Nutt. 1905. Pp. xvi. + 308.

In his 'A Lenten Journey in Umbria,' Thomas Adolphus Trollope gives to Gubbio just four times the space which he gives to Perugia; and not without excuse, for, with the exception of Assisi, there is probably no Umbrian town which better repays a visit. And it is to "this strangely interesting, romantic, mediæval city, stranded and derelict on the slopes of Monte Ingino, far from the shores of civilization and all active movement," that Miss McCracken has devoted the work before us. In her pages history, art, and legend are skilfully blended, each in its just proportion. The book is one which could have been written only by a real lover of Italy, and may be confidently recommended to the English-speaking tourist. Not only will it enable him to do his sightseeing intelligently, but it is well worth reading in his own study, even if he has no immediate prospect of visiting the town. Indeed, the purely guide-book part of the volume forms a very small proportion of the whole—only three chapters out of fourteen.

As befits a work which is dedicated to the Bishop of Gubbio, and which has been found worthy of a preface from the pen of M. Paul Sabatier, the best chapter is probably that which deals with the old, delightful story of St. Francis and the wolf, "le grand vilain loup," whose skull, we are told, was dug up, only the other day, on the very spot which tradition has pointed out as the place where "Brother Wolf" was burned after he had died of old age, greatly mourned by all the people. Another excellent chapter treats of the celebrated Eugubine Tables; while, in a third, the wild bacchanalian orgies which are known as the "Festa de' Ceri" are fully described. Here, however, the narrative, though exact and conscientious enough, somehow fails to thrill; for the authoress dwells more lovingly on the spotless life of the good bishop and saint, in whose honor the festival is held, than on the swaying, staggering race of the wine-maddened *ceraioli* as they bear their tremendous burdens up the mountainside to his church upon the summit.

It is, however, in her sketch of the history of the city that we care for Miss McCracken least. Here her usual accuracy occasionally forsakes her. The mention of "the French (!) King Charlemagne" gives us something of a shock; and, when we are told, further on, that the Emperor Henry VI. "contested the kingdoms of Naples and Sicily with Manfred, the bastard of Ruggiero," we feel that the only charitable hypothesis is that the correction of proofs was left entirely to the proofreader.

On pages 27-28 a series of more or less mythical wars and alliances are recorded as indisputable facts, although it is well known that the original authority for some, at least, of the events thus described was none other than that Cyprian Manente who invented for his native Orvieto a long list of perfectly impossible consuls, and whose whole history is the product of an unbridled imagination. Again, on page 43, we are informed that, in 1180, the Perugians "made themselves masters of Città di Castello," and, on page 44, that, about the year 1182 (*sic*), Gubbio "entered into a sort of forced alliance" with Perugia. From this statement the reader would hardly suppose that the stipulations contained in the two conventions were identical. Yet we have documentary evidence that such was the case.

Minor inadvertences of this sort are, however, of very little importance. Certainly they do not militate against the general usefulness of the book, and, therefore, we would end, as we have begun, with the clear sound of praise, most heartily commending 'Gubbio, Past and Present,' to the particular notice of all students of mediæval Italy.

English Table Glass. By Percy Bate. (Newnes Library of Applied Arts.) London: George Newnes; New York: Charles Scribner's Sons. Pp. xiii., 130.

We have noticed already two volumes of this series, namely, the 'Dutch Pottery' and the 'English Furniture,' and we found it right to say that the selection was good and the treatment sagacious. The books appeared to be the work of writers thoroughly familiar with their subject. Now comes the present volume and proves to be full of the knowledge and the insight of the enthusiastic collector. It is dedicated to Mary Bate in the following triolet,

> You planted the seed,
> So the blossom's your own:
> Be it flower, be it weed,
> You planted the seed;
> If it please you to read,
> You will see how it's grown—
> You planted the seed,
> So the blossom's your own!

—and the early pages tell of the author's own proceedings as a collector and his growth as a connoisseur. He names a gentleman whom he styles "the Doyen of Glass Collectors" (p. 13), and another friend upon whom he has drawn freely (p. 15); and he adds that the two collections, his own, and Mrs. Rees Price's, "taken together, comprise a very adequate representation of the English glass of the eighteenth century."

There are 254 separate glasses illustrated, all arranged upon the black backgrounds of sixty-seven half-tone plates; and the process lends itself well to such reproduction. The glasses figured have a singular look of being real—transparent as well as solid, brittle as well as heavy and hard. The engraved figures upon them show up well, and the mottoes are legible until they pass out of sight with the rounded surface. The reader who will examine these plates in succession, trying to note the characteristic of English glass from 1586 (the earliest date given) to the end, will not find one single specimen of the graceful and somewhat fantastic ware which we study as "Venice glass," nor of the more restrained design which we associate with French glass of the sixteenth century, nor yet of the vagaries of Bohemian glass and its imitations. Great refinement of form, in bowl or in stem and foot, has not been attained in any of the specimens; nor is the obscured and bubbled glass retained, which, by its partial opacity, shows off form so well. Everything here is thick and solid, as transparent as it could be made; all is of clear plain glass, meant to be adorned by etching or by such engraving as is done with the wheel. The forms, moreover, are simple, and are limited to the convex bowl on a baluster stem, and the concave bowl rising from a plain, nearly cylindrical stem; and such obvious modifications of these two types as will occur to any one who remembers the wine-glasses of his own time. There are just a few exceptional forms, of which more below; but the essential point is that there is no love of the hot glass to be seen, no disposition to play with it, and to make charming bits of decoration out of it, regardless of utility. That especially vitreous artistic tradition is not recognizable in the English ware as exemplified by the Rees Price and Bate collections taken together.

As to the exceptional pieces, No. 136 is a two-handled cup with more sign of that enjoyment in the mere working of the glass than is found elsewhere. If the reader wishes to know what a rummer is, he will find two examples on the same plate; they are simply broad and deep wine-glasses fit to hold a half-pint drink, and intended, no doubt, for hot rum and water. This is worth noting because the dictionaries find it very hard to fix exactly the significance of such old terms of technical use, and assuredly do not give any such definition as is implied here. No. 145 is a yard-of-ale glass; and this term is explained in the dictionaries correctly, although Mr. Bate remarks that he, personally, never found it difficult to empty one of them without the catastrophe which the student is told to expect. The three pieces on Plate XLI. are candlesticks. Plate XLII. gives a very early decanter, and with it two fillers for punch. These last are continuous tubes with one end opened out into a bowl as big as a punch glass; you plunge this bowl into the liquor, close the open end of the tube with your thumb, and afterward release what you have brought away when it is over the glass which is waiting. The name "porringer" is given to a covered glass jar (No. 183) with two handles, and capacious enough to hold nearly half a gallon.

There are many historical curiosities among these pieces, and of course Jacobitism in abundance. As we began with a triolet, we will close with a purely English bit of verse, one stanza of a "God Save the King" especially adapted to the dethroned Stuarts and the heir-apparent, "the Old Pretender."

> God bless the Prince of Wales,
> The true-born Prince of Wales,
> Sent us by thee.
> Grant us one favour more,
> The King for to Restore,
> As thou hast done before,
> The Familie.

A Handbook of the Cornish Language, Chiefly in its Latest Stages. With Some Account of its History and Literature. By Henry Jenner. London: Nutt. 1904.

The present wave of Celtic enthusiasm has reached Cornwall, and if there has not been a revival of the Cornish language, there has been at least a vigorous discussion of the question whether it is dead. The first "Pan-Celtic Congress," held at Dublin in 1901, refused to recognize Cornwall as a Celtic nation on the ground that it had no language. But last summer, at the second Congress in Carnarvon, this action was reconsidered, and the Cornish delegation admitted—perhaps because its zeal appeared to merit recognition, for the discussion in the interval had hardly proved Cornish to be in any proper sense a living tongue. It is pretty clear that the language did not die with Dolly Pentreath, as is commonly supposed, in 1777. But, though the knowledge of it can be traced in several "last living speakers" after her day, and words and phrases were handed down in certain families until 1850 or later, still, the actual use of Cornish cannot have survived far into the nineteenth century. For two or more generations now it has probably ceased to exist, except as an element in the vocabulary of the English dialect of Cornwall. Whether the present Celtic revival has restored it to use at all in common speech, we cannot say; but the movement has stimulated a certain amount of Cornish composition, and Mr. Jenner is one of the few men who have sufficient mastery of the language to write sonnets and carols in it.

His 'Handbook' is intended chiefly for those who wish, like him, to learn to speak and write Cornish. For their benefit he has even undertaken to devise a regular system of spelling, such as the language has never possessed, and to normalize the grammar. We doubt, however, if many students will use the book for the practical purpose for which it was intended. It is more likely to be consulted by philologists who are working their way through the early Cornish writings, and such scholars will find it at once convenient and unsatisfactory. It presents a handy conspectus of the grammar, and contains a fairly full account of the existing Cornish monuments, and of the scientific literature that deals with them. Nowhere else, so far as we know, is this information made so easily accessible. But, unfortunately, Mr. Jenner's statements are sometimes incomplete or inaccurate, and his grammatical method is partly antiquated. In his preliminary account of Cornish grammarians there is no adequate recognition of the labors of Zeuss, and not even a reference to Ebel's important early article on initial mutations (Kühn's *Beiträge* 5, 145 ff.) appears in the bibliography at the end. In the chapter on pronunciation the phonetic symbols are imperfect, and not altogether consistent. For serious students Mr. Jenner would have [illegible] better to employ some such phonetic notation as Mr. Henry Sweet has made familiar to students of English grammar; [illegible] use of such a system would probably have saved him from speaking (on page 102) of "the first syllable of *jibe*." Another fault of method, in our opinion, occurs on page 91, where an adjective is said to form its feminine by changing the initial. The initial mutations are matters of phonology, rather than inflection, and the two should not be thus confused. On page 100 Mr. Jenner refers to a "euphonic" *dh*, which is an explanation that does not explain. The term is a relic of the old-fashioned grammars where difficult letters were explained as "inserted for euphony." Finally, we have observed some questionable statements of fact. On page 59 Gaelic *ao* is said to be pronounced in Scotland like German *ü*, and in Ireland like *ī* (English *ee*), which is true only for some dialects. Both the pronunciations mentioned are known in Ireland, and a sound different from either is usual in Scottish Gaelic. Again, on page 82, Mr. Jenner implies that Welsh has no survivals of a genitive inflection (which is not quite true); and then he cites the preposition *erbyn* as a Cornish instance, though exactly the same word exists in Welsh, and in both languages the second element (from *pen*, head) is probably dative rather than genitive.

It is only fair to add, after making these criticisms of Mr. Jenner's work, that the 'Handbook' is the best existing introduction to Cornish.

In a Syrian Saddle. By A. Goodrich-Freer. London: Methuen & Co. Pp. 363.

Miss Freer's 'Inner Jerusalem,' which was an account of the present conditions of that city, the habits, customs and religious beliefs of its inhabitants, is followed with almost incredible rapidity by another

volume dealing with her travel experiences in Palestine. 'In a Syrian Saddle' tells the story of two flying trips from Jerusalem as a centre. With "The Professor," "The Doctor," to whom this book is dedicated, "on the eve of starting together on a longer journey," and two "sportsmen," who, as far as the narrative herein contained is concerned, seem to have found little sport and no game, she crossed the Jordan to visit Madaba, Mesheytta (or as she spells it, Mshatta), Ammân and Jerash. This trip covers the first half of the book, entitled "In Moab." The second half, called "In Galilee and Samaria," describes the journey of part of the same company and others through Samaria, visiting the excavations at Ta'anak and Mutesellim, to Nazareth and the Sea of Galilee. The return to Jerusalem was made by way of Besan and the Jordan valley. There was nothing novel in the sights seen and the experiences undergone on either trip, with the possible exception of the last part of the second journey, down the Jordan valley from Besan, where the party lost its way in a manner which reminds one somewhat of Kinglake's experience recorded in 'Eothen,' except that Kinglake was lost on the east and Miss Freer on the west side of the Jordan.

Miss Freer had the good fortune to see the wonderful facade at Mesheytta before it had been removed to grace the new Friedrich Museum in Berlin; and, indeed, Dr. Schumacher was engaged in removing it at the time of the visit here recorded. She also had the good fortune to visit Ta'anak and Mutesellim while Dr. Schumacher was exploring the latter and could act as cicerone at both places. Miss Freer is an enthusiastic lover of nature; and, at least in her writing, hardships and discomforts which would daunt another lady, do but form a subject of merriment for her. She describes herself throughout as "the lady," and the other members of the party are described by similar half-humorous titles, "The Professor" (Professor Euting), "Baedeker" (Professor Benzinger), etc. It may not be amiss to say, referring to the introduction, that the longer journey to which Miss Freer there refers has now been commenced, and that, since this book was published, the author has exchanged the name of Freer for that of Spoer.

There are no illustrations. The book is a beautiful specimen of typography and general bookmaking, singularly light in weight in proportion to its bulk. It is disfigured, however, by the practice so commonly indulged in by English publishers, of binding a mass of advertisements within the covers. There are forty pages of advertisements in this volume, somewhat more than one-tenth of the whole space within the covers. We expect advertisements in newspapers and magazines, and the reader who does not wish to use them derives substantial benefit from their presence in the price which he pays for his reading matter. The English practice of binding up advertisements in books is quite another matter. Here the advertisements are used only for the good of the publishers. The reader must pay the same price for the book and its binding—must pay more if he imports—and then, if he wishes to place on his library shelves a volume presenting a literary and not a commercial aspect, he is compelled to have the covers taken off and the book rebound at a considerable additional expense.

Robert Browning. By C. H. Herford. Dodd, Mead & Co. 1905.

This is likely to stand as one of the best of the numerous short critical lives of its provocative poet. Mr. Herford does not escape altogether the contagion that has made so many good men and critics utter tall talk, but his book is singularly free from the conventional Browning jargon. His style is picturesque and pithy, and his literary perspective is not distorted by the jagged bulk of his subject. In writing of Browning's positive poetic qualities he is at his best. It is naturally not easy to find anything very novel to say of these matters immediately after the publication of such books as those of Stopford Brooke, Mr. Dowden, and Mr. Chesterton. Mr. Herford does manage, nevertheless, to give an engagingly fresh and personal turn to his thought and phrase. We can scarcely grant the justice of the epithet "Shakespearian" in the characterization of the style of 'The Ring and the Book,' yet the whole is finely said:

"The execution vindicated the design. Voluble, even 'mercilessly voluble,' the poet of 'The Ring and the Book' undoubtedly is. But it is the volubility of a consummate master of expression, in whose hands the difficult medium of blank verse becomes an instrument of Shakespearian flexibility and compass, easily answering to all the shifts and windings of a prodigal invention, familiar without being vulgar, gritty with homely detail without being flat; always, at its lowest levels, touched like a plain just before sunrise with hints of ethereal light, momentarily withheld; and rising from time to time without effort to a magnificence of phrase and movement touched in its turn with that suggestion of the homely and the familiar which in the inmost recesses of Browning's genius lurked so near—so vitally near—to the roots of the sublime."

In his elaborately schematized analysis of "Browning's Mind and Art," Mr. Herford seems to us to build too vast a structure of psychologizing on too slight and too personal a foundation; yet this section will doubtless prove of service to academic students of the poet, and it may be conveniently disregarded by the plain man.

BOOKS OF THE WEEK.

Banks, Nancy Houston. The Little Hills. Macmillan Co. $1.50.

AN EDUCATIONAL DIRECTORY.

School Trustees, Principals, Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism the *Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, the *Nation* finds its readers able and anxious to secure for their children the best educational advantages

The School List in the *Nation* has been a representative one for many years. It includes cards of many of the most prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

The *Nation* is sent free while advertisement continues.

THE NATION, 206 to 210 Broadway, New York.
